Professional-Cloud-DevOps-Engineer Reliable Test Forum | Test Professional-Cloud-DevOps-Engineer Dumps Demo

In order to be able to better grasp the proposition thesis direction, the Google Cloud Certified - Professional Cloud DevOps Engineer Exam study question focus on proposition which one recent theory and published, in all kinds of academic report even if update to find effective thesis points, according to the proposition of preferences and habits, ponder proposition style of topic selection, to update our Professional-Cloud-DevOps-Engineer Exam Question, to facilitate users of online learning, better fit time development hot spot.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q103-Q108):

NEW QUESTION # 103

You support a popular mobile game application deployed on Google Kubernetes Engine (GKE) across several Google Cloud regions. Each region has multiple Kubernetes clusters. You receive a report that none of the users in a specific region can connect to the application. You want to resolve the incident while following Site Reliability Engineering practices. What should you do first?

- A. Use Stackdriver Logging to filter on the clusters in the affected region, and inspect error messages in the logs.
- B. Use Stackdriver Monitoring to check for a spike in CPU or memory usage for the affected region.
- C. Add an extra node pool that consists of high memory and high CPU machine type instances to the cluster.
- D. Reroute the user traffic from the affected region to other regions that don't report issues.

Answer: D

NEW QUESTION # 104

Your application artifacts are being built and deployed via a CI/CD pipeline. You want the CI/CD pipeline to securely access application secrets. You also want to more easily rotate secrets in case of a security breach. What should you do?

- A. Encrypt the secrets and store them in the source code repository. Store a decryption key in a separate repository and grant your pipeline access to it
- B. Store secrets in a separate configuration file on Git. Provide select developers with access to the configuration file.
- C. Store secrets in Cloud Storage encrypted with a key from Cloud KMS. Provide the CI/CD pipeline with access to Cloud KMS via IAM.
- D. Prompt developers for secrets at build time. Instruct developers to not store secrets at rest.

Answer: B

NEW QUESTION # 105

You are reviewing your deployment pipeline in Google Cloud Deploy. You must reduce toil in the pipeline and you want to minimize the amount of time it takes to complete an end-to-end deployment. What should you do?

Choose 2 answers

- A. Add more engineers to finish the manual steps.
- B. Create a trigger to notify the required team to complete the next step when manual intervention is required.
- C. Automate promotion approvals from the development environment to the test environment.
- D. Use a script to automate the creation of the deployment pipeline in Google Cloud Deploy.
- E. Divide the automation steps into smaller tasks.

Answer: B,C

Explanation:

Explanation

The best options for reducing toil in the pipeline and minimizing the amount of time it takes to complete an end-to-end deployment are to create a trigger to notify the required team to complete the next step when manual intervention is required and to automate promotion approvals from the development environment to the test environment. A trigger is a resource that initiates a deployment when an event occurs, such as a code change, a schedule, or a manual request. You can create a trigger to notify the required team to complete the next step when manual intervention is required by using Cloud Build or Cloud Functions. This way, you can reduce the waiting time and human errors in the pipeline. A promotion approval is a process that allows you to approve or reject a deployment from one environment to another, such as from development to test. You can automate promotion approvals from the development environment to the test environment by using Google Cloud Deploy or Cloud Build. This way, you can speed up the deployment process and avoid manual steps.

NEW QUESTION # 106

You are deploying an application to Cloud Run. The application requires a password to start. Your organization requires that all passwords are rotated every 24 hours, and your application must have the latest password. You need to deploy the application with no downtime. What should you do?

- A. Store the password directly in the code. Use Cloud Build to rebuild and deploy the application each time the password changes.
- B. Use Cloud Build to add your password into the application container at build time. Ensure that Artifact Registry is secured from public access.
- C. Store the password in Secret Manager and send the secret to the application by using environment variables.
- **D. Store the password in Secret Manager and mount the secret as a volume within the application.**

Answer: D

NEW QUESTION # 107

Your company follows Site Reliability Engineering principles. You are writing a postmortem for an incident, triggered by a software change, that severely affected users. You want to prevent severe incidents from happening in the future. What should you do?

- A. Identify engineers responsible for the incident and escalate to their senior management.
- B. Ensure that test cases that catch errors of this type are run successfully before new software releases.
- **C. Follow up with the employees who reviewed the changes and prescribe practices they should follow in the future.**
- D. Design a policy that will require on-call teams to immediately call engineers and management to discuss a plan of action if an incident occurs.

Answer: C

NEW QUESTION # 108

.....

Our IT professionals have made their best efforts to offer you the latest Professional-Cloud-DevOps-Engineer study guide in a smart way for the certification exam preparation. With the help of our Professional-Cloud-DevOps-Engineer dumps collection, all level of candidates can grasp the key content of the real exam and solve the difficulty of Professional-Cloud-DevOps-Engineer Real Questions easily. The most important is that our test engine enables you practice Professional-Cloud-DevOps-Engineer exam pdf on the exact pattern of the actual exam.
