Valid 350-601 Test Book | 350-601 Practical Information

We guarantee you that our top-rated Cisco 350-601 practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the Implementing Cisco Data Center Core Technologies (350-601 DCCOR) (350-601) certification exam on the very first go. The authority of Exam4Free in 350-601 Exam Questions rests on its being high-quality and prepared according to the latest pattern.

The Cisco 350-601 exam tests the candidate's ability to implement and configure data center technologies, including network, compute, storage network, automation, security, and application optimization. It covers various technologies such as Cisco Nexus switches, Cisco ACI, Cisco UCS, Cisco HyperFlex, and Cisco Intersight. 350-601 Exam also tests the candidate's knowledge of troubleshooting, scripting, and automation tools. To achieve success in the exam, the candidates need to have a deep understanding of data center technologies, industry best practices, and hands-on experience with Cisco products.

Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q216-Q221):

NEW QUESTION # 216

A DevOps engineer must design a solution for a Cisco Unified Fabric solution to provision, monitor, and troubleshoot the network infrastructure for a data center based on Cisco Nexus Series Switches. The solution must provide visibility and control of the unified data center. Which solution meets these requirements?

- A. Cisco Data Center Network Manager
- B. Cisco AppDynamics
- C. Cisco CloudCenter Suite
- D. Cisco DNA Center

Answer: A

Explanation:

Cisco Data Center Network Manager (DCNM) is specifically designed for managing, provisioning, monitoring, and troubleshooting Cisco Nexus Series Switches in a data center environment. It provides comprehensive visibility and control of the unified data center, which makes it the appropriate choice for a Cisco Unified Fabric solution.

NEW QUESTION # 217

An engineer configures port security on a Cisco MDS 9000 Series Switch. The MDS switch configuration must meet these requirements

- * The switch must initiate the VSAN 4 port security database despite any conflicts.
- * New devices must be statically added to the switch.
- * Configuration changes for VSAN 4 must be applied throughout the fabric with any locks on the fabric released Which configuration set meets these requirements?

- A. Option A
- B. Option C
- C. Option B
- D. Option D

Answer: B

Explanation:

The configuration set that meets the requirements for configuring port security on a Cisco MDS 9000 Series Switch is Option C. This option includes the command `port-security activate vsan 4 force`, which initiates the VSAN 4 port security database despite any conflicts. It omits the `auto-learn` command, indicating that new devices must be added manually. Additionally, the `port-security distribute` command ensures that configuration changes are applied throughout the fabric and any locks on the fabric are released, as required.

References: = For more detailed information on port security configuration for Cisco MDS 9000 Series Switches, you can refer to the Cisco MDS 9000 Series Security Configuration Guide

NEW QUESTION # 218

Refer to the exhibit. What is the reason the system-fm-vrrp checkpoint was created?

- A. The network administrator manually created it.
- B. The VRRP service restarted and the checkpoint was automatically created.
- C. The VRRP-enabled feature has been disabled.
- D. The VRRP process crashed and the checkpoint was automatically created.

Answer: C

Explanation:

Reasons that could trigger automated system checkpoints are highlighted below:

- License expiration of a feature
- Disabling a feature with the no feature command
- Removing an instance of a Layer 3 protocol

The system-generated checkpoint name convention has the format system-fin-feature. To help illustrate this automated feature we attempted to disable the VRRP feature on our Nexus 5000 therefore triggering the system to create a checkpoint. First we confirm the VRRP feature is enabled by issuing the show feature | include vrrp command then disable it and then verify it has been disabled:

Notice that the system now shows a second checkpoint system-fin-vrrp which did not previously exist. This second checkpoint was created automatically by the Nexus as soon as we disabled the vrrp feature.

NEW QUESTION # 219

A Cisco UCS C-Series server is installed at a data center. The server should be managed by the Cisco UCS Manager by using a single cable for management and data traffic. Which configuration should be applied after the Physical connection is established?

- A. Option C
- B. Option A
- **C. Option B**
- D. Option D

Answer: C

NEW QUESTION # 220

An engineer must configure the HSRP protocol to implement redundancy using two Cisco Nexus Series Switches. In addition, the HSRP must meet these requirements:

- * Switch1 must retain the primary role if switch2 goes offline
 - * Switch1 must retain the primary role until normal conditions are restored.
 - * Switch1 and switch2 must ensure that the routing tables are converged before taking the active role
 - * switch2 must retain the primary role if the default gateway is not reachable
- Drag and drop the configuration commands from the right to the left to meet the requirements. The commands are used more than once. Not all commands are used.

Answer:

Explanation:

NEW QUESTION # 221

.....

Just like the old saying goes, motivation is what gets you started, and habit is what keeps you going. A good habit, especially a good study habit, will have an inestimable effect in helping you gain the success. The 350-601 Study Materials from our company will offer the help for you to develop your good study habits. If you buy and use our study materials, you will cultivate a good habit in study.
