220-1101 New Soft Simulations - High-quality Exam 220-1101 Revision Plan and Pass-Sure CompTIA A+ Certification Exam: Core 1 Valid Test Questions

Do you want to spend the least time to pass your exam? If you do, then we will be your best choice. 220-1101 training materials are compiled by experienced experts who are quite familiar with the exam center, so the quality can be guaranteed. In addition, 220-1101 exam materials contain most of the knowledge points for the exam, and you can have a good command of these knowledge points through practicing. In order to strengthen your confidence for the 220-1101 Exam Braindumps, we are pass guarantee and money back guarantee if you fail to pass the exam. The money will be returned to your payment account.

CompTIA A+ Certification is a globally recognized certification that is respected by employers worldwide. It is the industry standard for starting a career in the IT industry, and it is a prerequisite for many advanced certifications, such as CompTIA Network+ and CompTIA Security+. Candidates who pass the exam demonstrate their knowledge and skills in computer hardware and software, and they are eligible for various IT job roles with a competitive salary.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q155-Q160):

NEW QUESTION # 155

Which of the following display types is available for laptops?

- A. CRT
- B. Plasma
- C. DLP
- **D. OLED**

Answer: D

Explanation:

The correct answer is A. OLED.

OLED stands for Organic Light-emitting Diode, and it is one of the three display types available for laptops, along with TN (Twisted Nematic) and IPS (In-Plane Switching) panels¹. OLED displays use organic compounds that emit light when an electric current is applied, unlike LCD displays that use a backlight to illuminate the pixels. OLED displays have several advantages over LCD displays, such as higher contrast, wider viewing angles, faster response times, and lower power consumption². However, OLED displays are also more expensive, less common, and more prone to burn-in than LCD displays².

CRT (Cathode Ray Tube), DLP (Digital Light Processing), and Plasma are not display types for laptops. CRT is an old technology that uses a vacuum tube to project an image on a phosphor screen. CRT monitors are bulky, heavy, and consume a lot of power³. DLP is a technology that uses a digital micromirror device and a light source to project an image on a screen or a wall. DLP is mainly used for projectors, not laptops⁴. Plasma is a technology that uses gas-filled cells that emit light when an electric current is applied. Plasma displays are mainly used for large-screen TVs, not laptops.

NEW QUESTION # 156

Which of the following wireless technologies would a company most likely implement for inventory management?

- A. NFC
- **B. RFID**
- C. Bluetooth
- D. 5G

Answer: B

Explanation:

RFD stands for Radio Frequency Identification, which is a technology that uses radio waves to identify and track objects that have RFID tags attached to them. RFID tags are small devices that store information and can be read by RFID readers without direct contact or line of sight. RFID can be used for inventory management, as it can provide real-time visibility and accuracy of the location, quantity, and status of the items in a warehouse, store, or supply chain .

NEW QUESTION # 157

A network technician has been tasked with creating a patch cable. The RJ45 connectors will not stay attached to the cable. Which of the following tools is needed to fix this issue?

- A. Loopback plug
- B. Cable tester
- C. Punchdown tool
- **D. Crimper**

Answer: D

Explanation:

A crimper is a tool that is used to crimp (attach) an RJ45 connector onto the end of a patch cable. The crimper applies pressure to the connector to make a permanent connection between the connector and the cable, ensuring that the connector will stay attached to the cable.

A cable tester is used to test the connectivity of a network cable. A punchdown tool is used to terminate network cables in a patch panel or keystone jack. A loopback plug is a diagnostic tool that is used to test network interfaces by simulating network traffic.

NEW QUESTION # 158

A user takes a tablet to a technician because the cursor on it keeps drifting. The technician notices the screen does not appear to be damaged. Which of the following is the most likely cause of the cursor issue?

- A. The touch-pen battery is depleted.
- **B. The screen needs to be recalibrated.**
- C. The screen is physically damaged.
- D. The screen rotation is incorrect.

Answer: B

Explanation:

The screen needs to be recalibrated. The cursor drift is a common symptom of a misaligned touch screen, which can be caused by physical shocks, temperature changes, or software updates. The screen can be recalibrated using the tablet's settings or a utility program. The screen is not physically damaged, as there is no visible crack or break. The screen rotation is not related to the cursor drift, as it only affects the orientation of the display. The touch-pen battery is not relevant, as the cursor drift occurs even without using the pen.

NEW QUESTION # 159

A technician is replacing the toner cartridge in a laser printer. Which of the following steps should the technician complete first? (Select two).

- **A. Open the toner compartment.**
- **B. Ensure the cartridge is the correct model.**
- C. Calibrate the printer.
- D. Run the cleaning utility.
- E. Remove the sealing tape.
- F. Check the expiration date of the cartridge.

Answer: A,B

Explanation:

Explanation

The technician is unable to access the company portal website, but other websites work fine. This suggests an issue with resolving the specific URL of the company portal, which is a function of DNS.

Here's why other options are not the most likely cause:

DHCP reservations: This is not relevant as the issue persists even when the technician tries a different workstation, indicating a problem beyond individual device configuration.

Static IP addresses: Similar to DHCP reservations, static IPs are not likely the cause as both affected workstations are experiencing the issue.

Default gateway: While the default gateway is necessary for internet access, other websites are working, making it less likely to be the root cause.
