

# Unique Features of Lead2Passed's Cisco 350-901 Exam Dumps (Desktop and Web-Based)

P.S. Free 2026 Cisco 350-901 dumps are available on Google Drive shared by Lead2Passed: <https://drive.google.com/open?id=1iaSP1IDVPgHW-N-rYUcy2Fi3b6oHpCWP>

To improve our products' quality we employ first-tier experts and professional staff and to ensure that all the clients can pass the test we devote a lot of efforts to compile the 350-901 study materials. Even if you unfortunately fail in the test we won't let you suffer the loss of the money and energy and we will return your money back at the first moment. After you pass the 350-901 test you will enjoy the benefits the certificate brings to you such as you will be promoted by your boss in a short time and your wage will surpass your colleagues.

One of the great features of our 350-901 training material is our 350-901 pdf questions. Developing Applications using Cisco Core Platforms and APIs (DEVCOR) exam questions allow you to prepare for the real 350-901 exam and will help you with the self-assessment. You can easily pass the 350-901 exam by using 350-901 dumps pdf. Moreover, you will get all the updated 350-901 Questions with verified answers. If you want to prepare yourself for the real Developing Applications using Cisco Core Platforms and APIs (DEVCOR) exam, then it is one of the most important ways to improve your 350-901 preparation level. We provide 100% money back guarantee on all 350-901 braindumps products.

## Reliable Cisco 350-901 Study Plan | 350-901 Intereactive Testing Engine

Our website gives detailed guidance to our candidates for the preparations of 350-901 actual test and lead them toward the direction of success. Each question in 350-901 pass guide is certified by our senior IT experts to improve candidates' ability and skills. The quality of training materials and the price of our 350-901 Dumps Torrent are all created for your benefit. Just add it to your cart.

## Cisco Developing Applications using Cisco Core Platforms and APIs (DEVCOR) Sample Questions (Q207-Q212):

### NEW QUESTION # 207

Drag and Drop Question

Drag and drop the code from the bottom onto the box where the code is missing to configure a Python script that uses RESTCOMF to add an IP address and subnet mask to an interface. Not all options are used.

### Answer area

```
import requests
import json
URL = ' [input] '
USER = 'cisco'
PASS = 'cisco'
url_get = URL + 'restconf/data/Cisco-IOS-XE-native:native/interface/
GigabitEthernet=1 [input] '
ip_address = {"address": "192.168.0.88", "mask": "255.255.255.0"}
response_change = requests.put(url_get,
                               auth=(USER, PASS),
                               headers=headers,
                               verify=False,
                               data= [input] )
```

https://10.0.0.20:443/

json.dumps(ip\_address)

ip/address/primary/address

json.loads(ip\_address)

ip/address

https://10.0.0.20:830/

Answer:

Explanation:

### Answer area

```
import requests
import json
URL = ' https://10.0.0.20:443/ '
USER = 'cisco'
PASS = 'cisco'
url_get = URL + 'restconf/data/Cisco-IOS-XE-native:native/interface/
GigabitEthernet=1 ip/address/primary/address '
ip_address = {"address": "192.168.0.88", "mask": "255.255.255.0"}
response_change = requests.put(url_get,
                               auth=(USER, PASS),
                               headers=headers,
                               verify=False,
                               data= json.dumps(ip_address) )
```

json.loads(ip\_address)

ip/address

https://10.0.0.20:830/

### NEW QUESTION # 208

Refer to the exhibit. An application stopped responding while users were using it. No configuration changes were made before the failure. What is the cause of this issue?

```
[01-01-2021 10:12:23] [CRITICAL] - https://api.cisco.com/query-device 403 forbidden
[01-01-2021 10:12:26] [CRITICAL] - https://api.cisco.com/query-device 403 forbidden
[01-01-2021 10:12:29] [CRITICAL] - https://api.cisco.com/query-device 403 forbidden
```

- A. The target is down for maintenance
- B. The authorization has expired or was revoked
- C. The authentication has expired or was revoked
- **D. The target server cannot manage the rate of queries**

**Answer: D**

Explanation:

The HTTP 403 Forbidden error indicates that the server understands the request but refuses to authorize it. In this case, the repeated 403 responses suggest that the authorization token used by the application has expired or been revoked.

- If authentication had failed, the server would likely return 401 Unauthorized, not 403.
- If the server was overloaded, it would return 429 Too Many Requests instead.
- If the target server was under maintenance, a 503 Service Unavailable response would be expected.

### NEW QUESTION # 209

Drag and Drop Question

Drag and drop the REST API authentication method from the left to the description on the right.

HTTP basic authentication	public API resource
token-based authentication	username and password in an encoded string
secure vault	API-dependent secret
OAuth	authorization through identity provider

**Answer:**

Explanation:

secure vault
HTTP basic authentication
token-based authentication
OAuth

### NEW QUESTION # 210

Which two situations are flagged by software tools designed for dependency checking in continuous integration environments, such as OWASP? (Choose two.)

- A. publicly disclosed vulnerabilities related to the included dependencies
- B. mismatches in coding styles and conventions in the included dependencies
- C. buffer overflows to occur as the result of a combination of the included dependencies
- D. incompatible licenses in the included dependencies
- E. test case failures introduced by bugs in the included dependencies

Answer: A,C

Explanation:

OWASP Dependency Check is a well known open-source tool which can track dependencies in your project and identify components with dependencies and checks if there are any known, publicly disclosed, vulnerabilities.

Source code analysis tools, also referred to as Static Application Security Testing (SAST) Tools, are designed to analyze source code and/or compiled versions of code to help find security flaws.

Useful for things that such tools can automatically find with high confidence, such as buffer overflows, SQL Injection Flaws, and so forth

#### NEW QUESTION # 211

```
*** Instantiate a UCS Service Profile from template and associate ***
from ucsm.sdk.ucshandle import UcsHandle
from ucsm.sdk.mometa.ls.LsBinding import LsBinding
from ucsm.sdk.mometa.ls.LsServer import LsServer

HANDLE = <item1>({
    "ucs-devcore.cisco.com",
    "admin",
    "password"
})
HANDLE.<item2>()

SP_FROM_TEMPLATE = <item 3>({
    parent_mo_or_dn='org-root/org-devnet',
    name="devcore-server-01",
    src_tmpl_name="devcore_template",
    type="instance"
})

LsBinding(
    parent_mo_or_dn=<item 4>,
    pn_dn="sys/chassis-7/blade-3"
)

HANDLE.<item 5>(SP_FROM_TEMPLATE, modify_present=True)
HANDLE.<item 6>()

HANDLE.<item 7>()
```

## 1.5 Getting Started

### 1.5.1 Connecting Disconnecting

```
from ucsm.sdk.ucshandle import UcsHandle

# Create a connection handle
handle = UcsHandle("192.168.1.1", "admin", "password")

# Login to the server
handle.login()

# Logout from the server
handle.logout()
```

Refer UcsHandle API Reference for detailed parameter sets to UcsHandle

Exhibit

### 1.5.2 Base APIs

The SDK provides APIs to enable CRUD operations.

- Create an object - `add_mo`
- Retrieve an object - `query_dn, query_classid, query_dns, query_classids`
- Update an object - `set_mo`
- Delete an object - `delete_mo`

The above APIs can be bunched together in a transaction (All or None). `commit_mo` commits the changes made using the above APIs.

All these methods are invoked on a `UcsHandle` instance. We refer it by `handle` in all the examples here-after. Refer to the *Connecting Disconnecting* to create a new handle.

### 1.5.3 Creating Objects

Creating managed objects is done via `add_mo` API.

Example:

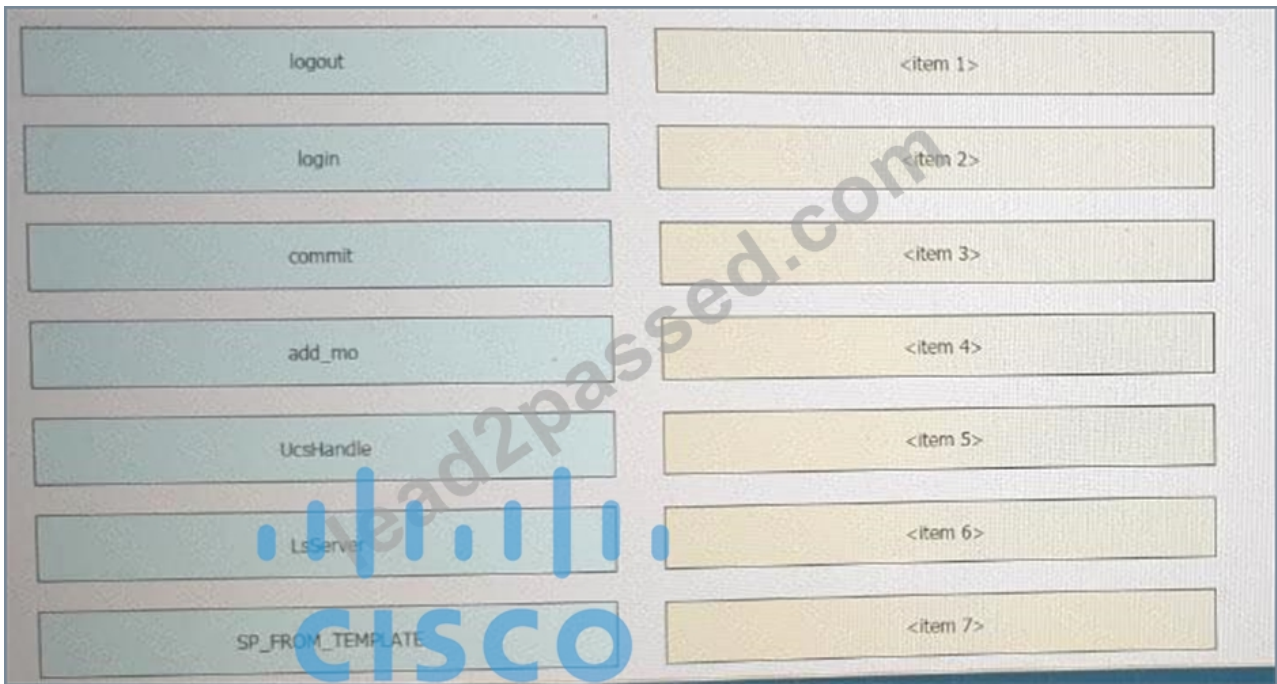

The below example creates a new Service Profile (`LsServer`) Object under the parent `org-root`

```
from ucsm.sdk.mometa.ls.LsServer import LsServer
```

```
sp = LsServer(parent_mo_or_dn="org-root", name="sp_demo")
handle.add_mo(sp)
```

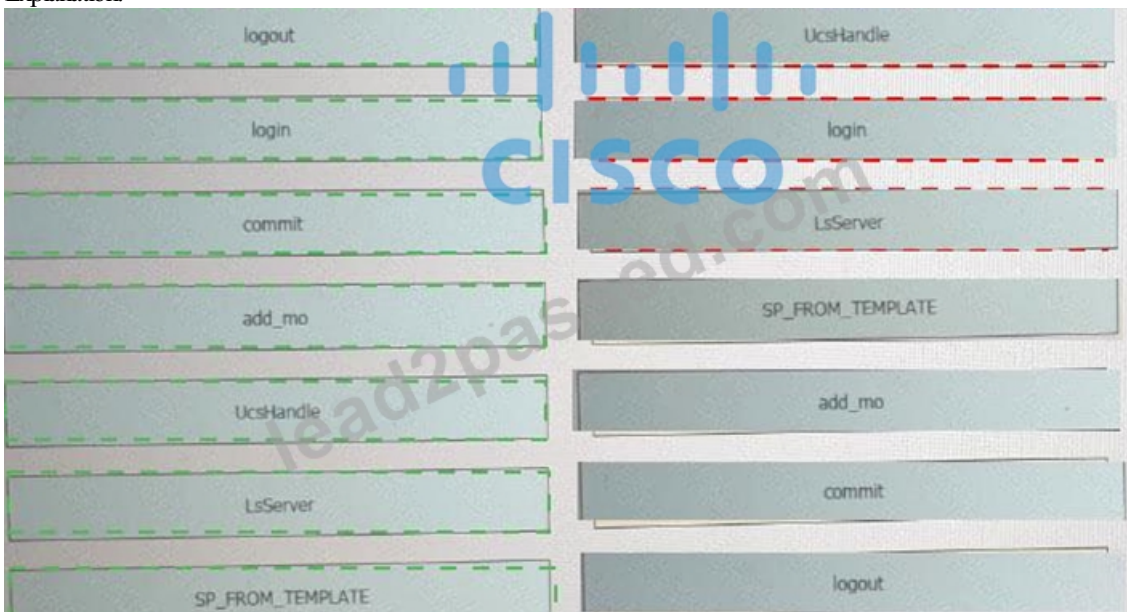

**note:** the changes will only be sent to server when `handle.commit()` is called.  
Add Mo API reference

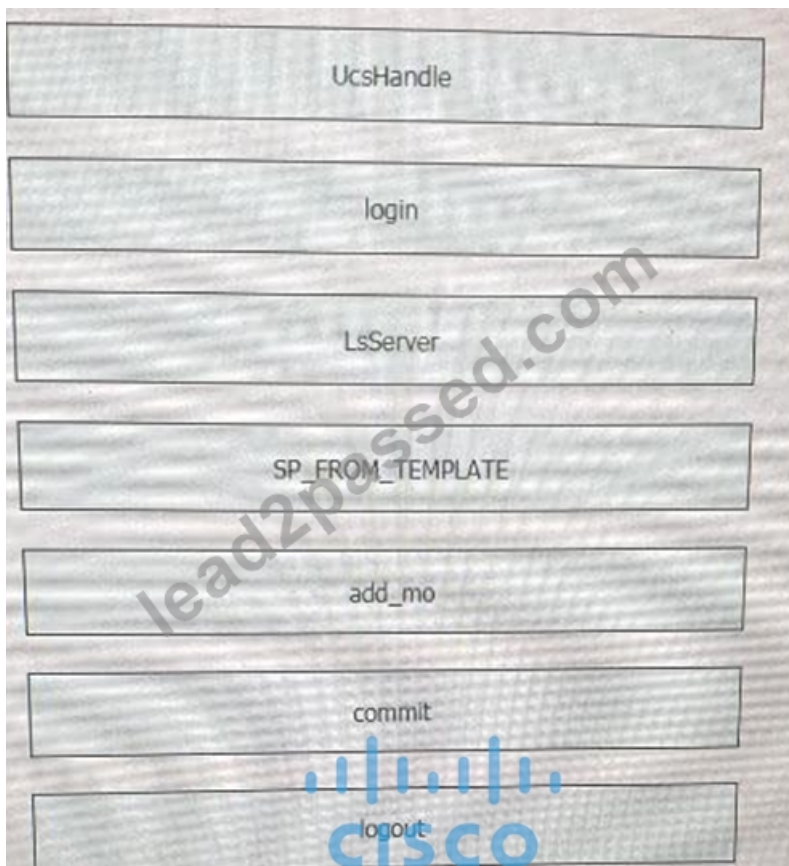

Refer to the exhibit above and click on the resource tabs in the top left corner to view resources to help with this question. Python code that uses the UCS Python SDK is instantiating a service profile named "devcore-server-01" from service profile template "device-template", then associating the service profile instance to blade 3 in chassis 7. Drag and drop the code snippets from the left onto the item numbers on the right that match the missing sections in the Python exhibit.

**Answer:**

Explanation:

## NEW QUESTION # 212

.....

“Quality First, Credibility First, and Service First” is our company’s purpose, we deeply hope our 350-901 Study Materials can bring benefits and profits for our customers. So we have been persisting in updating in order to help customers, who are willing to buy our test torrent, make good use of time and accumulate the knowledge. We will guarantee that you will have the opportunity to use the updating system for free.
