ISQI ISTQB Certified Tester-Foundation Level - Usability Testing 認定CTFL-UT 試験問題 (Q14-Q19):

質問 # 14

Which of the following is a principal task of the usability test moderator role?

- A. Define testing tasks
- B. Create a survey plan
- C. Write a usability test plan
- D. Log usability problems

正解: A

解説:

The usability test moderator plays a crucial role during the execution phase of a usability test. Their principal task is to facilitate the test sessions by guiding participants through predefined testing tasks, observing behaviors, and ensuring that the test environment is neutral and free from bias. Defining testing tasks, however, is primarily done during the test design phase by the usability test designer or analyst, but the moderator ensures these tasks are clearly communicated and administered to participants during the session. Logging usability problems (option B) is often done by observers or analysts reviewing session recordings or notes, not directly by the moderator during live testing. Creating a survey plan (option C) and writing the usability test plan (option D) are preparatory activities generally done before the test sessions and are not the moderator's main focus. Therefore, the principal role of the moderator centers on conducting the sessions and managing task delivery effectively to obtain authentic user interaction with the system under test.

質問 # 15

Why are positive usability findings of high importance? Which of the following statements is wrong?

- A. Positive usability findings allow a better view of the usability of the product.
- B. Positive usability findings should be used to communicate to the development team which features should not be modified or deleted.
- C. Positive findings are of high importance because they can be used in the report to justify the costs of the test.
- D. Positive usability findings make it easier to sell the need for correcting usability problems by giving a balanced view.

正解: C

解説:

Positive usability findings play a key role in reinforcing what is working well in the user interface. They help:

A: Build developer confidence and soften criticism when pointing out issues.

C: Provide a complete picture of usability strengths and weaknesses.

D: Inform developers what should remain unchanged during redesign.

However, B is incorrect because justifying usability test costs should not rely solely on positive findings. Cost justification should come from the overall impact of usability on user satisfaction, performance, and business outcomes-not just good results.

質問 # 16

Which of the following statements about usability test plans is true?

- A. It should be very elaborate and at least 10 pages
- B. It contains the results of the test sessions
- C. It should contain the briefing instructions
- D. It contains a schedule

正解: D

解説:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details

when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document. Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.

質問 # 17

Which of the following statements about usability test scripts is wrong?

- A. It contains answers to the test questions.
- B. It contains pre-session interview questions.
- C. It contains post-session interview questions.
- D. It is a checklist used by the moderator of a usability test.

正解: A

解説:

A usability test script is a structured document used by the moderator to ensure consistency across test sessions. It typically includes pre-session briefing text, pre- and post-session interview questions, and the specific usability tasks to be performed. However, it does not include answers to the test questions, as usability tests focus on observing user behavior and performance-not testing users' knowledge. Providing answers would bias results and invalidate findings. Thus, option D is incorrect and the best choice.

質問 # 18

Which of the following statements best describe Rapid Iterative Testing and Evaluation?

- A. Testing is informal and many potential users can be accessed
- B. Testing focuses on instant redesigns and confirming made changes
- C. Testing is quantitative
- D. Testing happens on a regular basis, e.g. each Monday

正解: B

解説:

Rapid Iterative Testing and Evaluation (RITE) is a usability method in which usability issues are identified and addressed in short cycles. Unlike traditional usability testing, RITE allows for immediate redesigns and retesting of the improved version within the same study. The goal is to refine the design quickly based on observed usability issues. Option A confuses scheduling with methodology, B is too vague, and D inaccurately characterizes RITE as quantitative, while it is typically qualitative. Therefore, C accurately reflects the purpose and approach of RITE.
