

# Cisco 300-620 Practice Exams - 300-620 Practice Test Engine

2026 Latest TroytecDumps 300-620 PDF Dumps and 300-620 Exam Engine Free Share: [https://drive.google.com/open?id=1CEa9YGYcycB\\_KUGpOuNerHoZ1tgqNOfo](https://drive.google.com/open?id=1CEa9YGYcycB_KUGpOuNerHoZ1tgqNOfo)

The Cisco 300-620 Certification Exam is one of the valuable credentials that are designed to prove an Cisco aspirant's technical expertise. With the Implementing Cisco Application Centric Infrastructure (300-620) certificate they can be competitive and updated in the highly competitive market. The Cisco Certification Questions offers a great opportunity for beginners and experienced professionals to not only validate their skills but also advance their careers.

The Implementing Cisco Application Centric Infrastructure certification exam focuses on various topics related to ACI, including fabric infrastructure, policies, access policies, virtualization, automation, and troubleshooting. You will be required to demonstrate your proficiency in deploying and configuring ACI fabrics, policies, and access policies. Additionally, the exam will test your ability to implement virtualization and automation technologies to optimize the performance of ACI solutions.

## 300-620 Practice Test Engine & 300-620 Online Bootcamps

The Cisco braindumps torrents available at TroytecDumps are the most recent ones and cover the difficulty of 300-620 test questions. Get your required exam dumps instantly in order to pass 300-620 actual test in your first attempt. Don't waste your time in doubts and fear; Our 300-620 Practice Exams are absolutely trustworthy and more than enough to obtain a brilliant result in real exam.

## Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q332-Q337):

### NEW QUESTION # 332

The unicast routing feature is enabled on the bridge domain. Which two conditions enable the Cisco ACI leaf to learn a source IP as a local endpoint? (Choose two.)

- A. Through ARP received on an SVI.
- B. IP traffic routed through an SVI.
- C. IP traffic routed through a Layer 3 Out.
- D. Through VXLAN traffic received on the uplink.
- E. Through Ethernet traffic received in a bridge domain.

**Answer: A,B**

Explanation:

<https://www.cisco.com/c/en/us/solutions/collateral/data-center-virtualization/application-centric-infrastructure/white-paper-c11-739989.html>

A Cisco ACI leaf switch follows these steps to learn a local endpoint MAC address and IP address:

1. The Cisco ACI leaf receives a packet with a source MAC Address (MAC A) and source IP Address (IP A).
2. The Cisco ACI leaf learns MAC A as a local endpoint.
3. The Cisco ACI leaf learns IP A tied to MAC A if the packet is an ARP packet.
4. The Cisco ACI leaf learns IP A tied to MAC A if the packet is routed.

In Figure 5, the packet is Layer 3 traffic with the Cisco ACI bridge domain Switch Virtual Interface (SVI) as its default gateway. Therefore, both the MAC address and IP address (Src MAC S and Src IP 192.168.1.1 in the figure) are learned as a single local endpoint on LEAF1, and only IP address 192.168.1.1 is learned as a remote endpoint on LEAF2.

### NEW QUESTION # 333

An engineer must monitor a Cisco ACI fabric with SNMP. The "permit any contract" attribute is not configured in the fabric. Which action must be taken to receive SNMP traps from Cisco APIC?

- A. Provide a standard contract under the user tenant.
- B. Configure the OOB contract under the common tenant.
- C. Consume the inband contract from the out-of-band EPG.
- D. Add the UDP filter port 162 to the existing OOB contract.

**Answer: D**

Explanation:

Pre-requisites

1. To allow SNMP communications, you must configure an "out-of-band (OOB) contract" in the "mgmt" tenant

to allow SNMP traffic. SNMP traffic typically uses UDP port 161 for SNMP requests.

2. Configure the APIC OOB IP addresses in the "mgmt" tenant. Although the OOB addresses are configured during APIC setup, the addresses must be explicitly configured in the "mgmt" tenant before the OOB contract will take effect.

About SNMP

ACI provides SNMPv1, v2, and v3 support, including Management Information Bases (MIBs) and notifications (traps). The SNMP standard allows any third-party applications that support the different MIBs to manage and monitor the ACI fabric.

### NEW QUESTION # 334

Which attribute should be configured for each user to enable RADIUS for external authentication in Cisco ACI?

- A. cisco-auth-features
- B. cisco-av-pair
- C. cisco-aci-role
- D. cisco-security domain

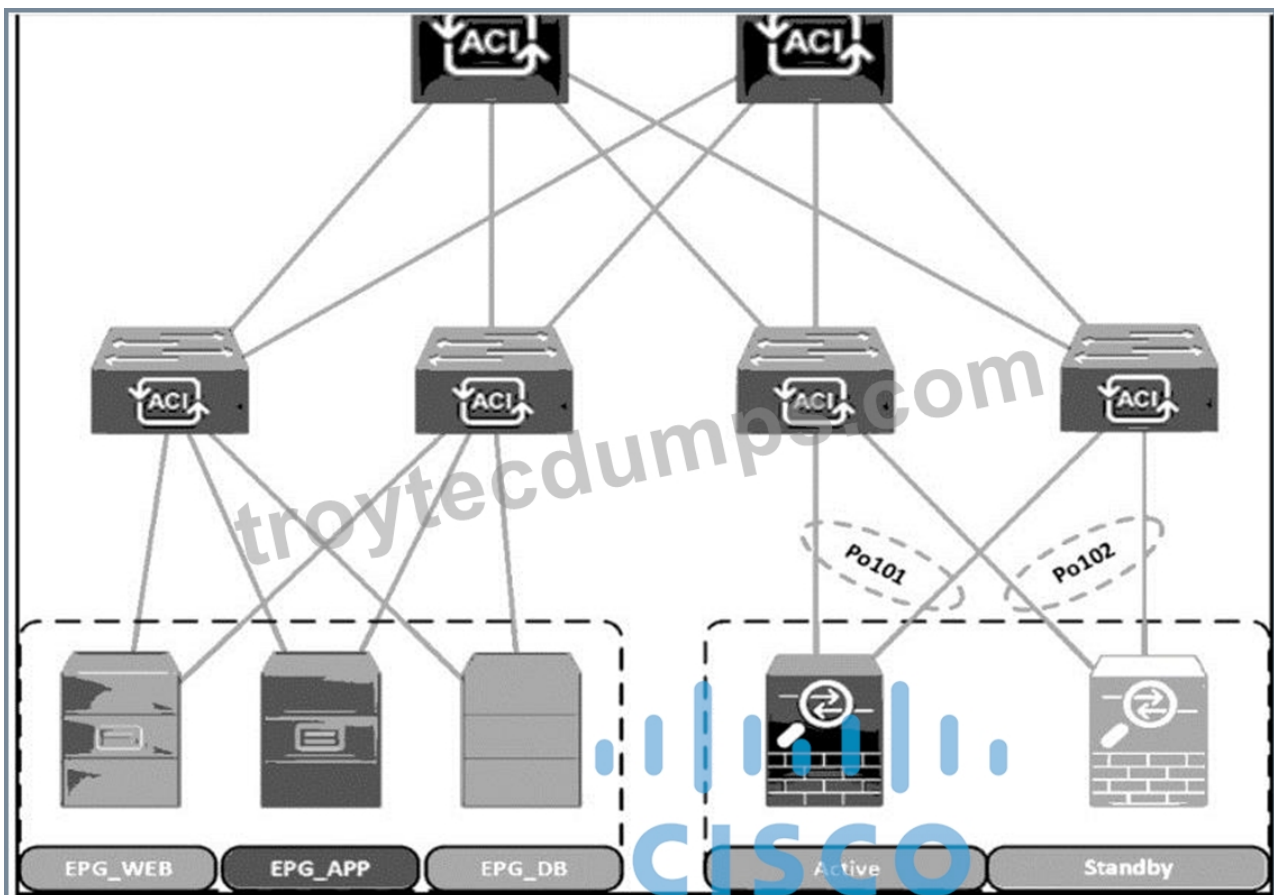

**Answer: B**

Explanation:

[https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/2-x/Security\\_config\\_b\\_Cisco\\_APIC\\_Security\\_Configuration\\_Guide/b\\_Cisco\\_APIC\\_Security\\_Guide\\_chapter\\_01011.html](https://www.cisco.com/c/en/us/td/docs/switches/datacenter/aci/apic/sw/2-x/Security_config_b_Cisco_APIC_Security_Configuration_Guide/b_Cisco_APIC_Security_Guide_chapter_01011.html)

### NEW QUESTION # 335

Refer to the exhibit.

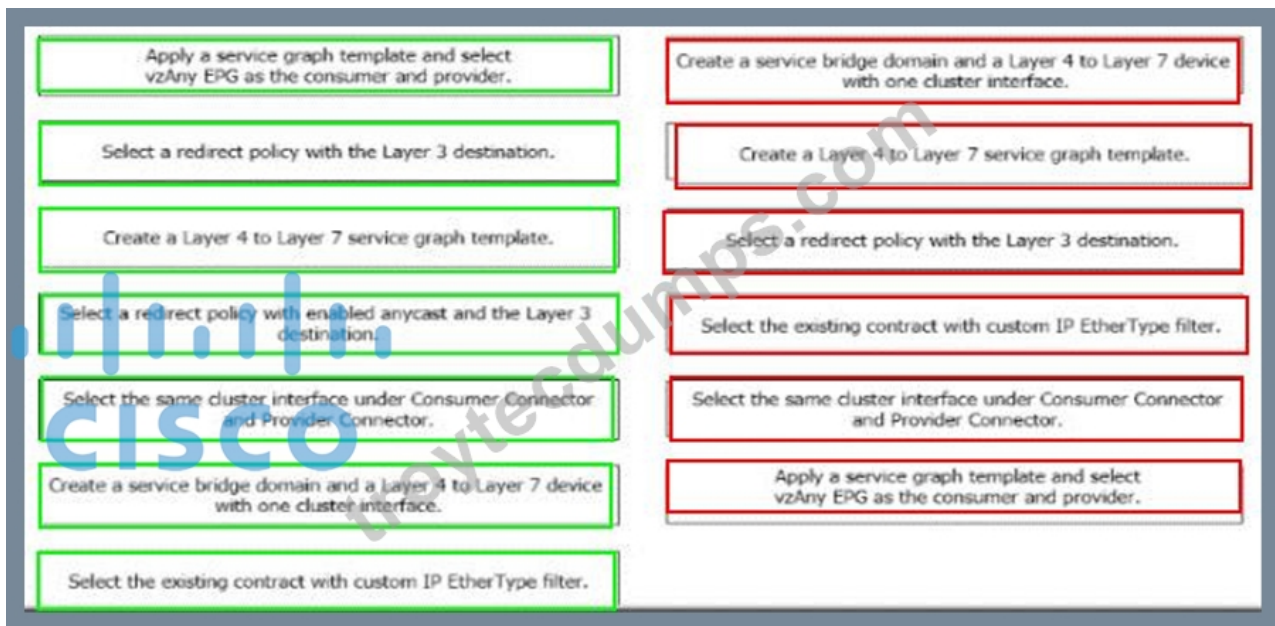

A Cisco ACI fabric is newly deployed, and the security team requires more visibility of all inter-EPG traffic flows. All traffic in a VRF must be forwarded to an existing firewall pair. During failover, the standby firewall must continue to use the same IP and MAC as the primary firewall. Drag and drop the steps from the left into the Implementation order on the right to configure the service graph that meets the requirements. (Not all steps are used.)

Apply a service graph template and select vzAny EPG as the consumer and provider.	Step 1
Select a redirect policy with the Layer 3 destination.	Step 2
Create a Layer 4 to Layer 7 service graph template.	Step 3
Select a redirect policy with enabled anycast and the Layer 3 destination.	Step 4
Select the same cluster interface under Consumer Connector and Provider Connector.	Step 5
Create a service bridge domain and a Layer 4 to Layer 7 device with one cluster interface.	Step 6
Select the existing contract with custom IP EtherType filter.	

**Answer:**

**Explanation:**

#### NEW QUESTION # 336

The Application team reports that a previously existing port group has disappeared from vCenter. An engineer confirms that the VM domain association for the EPG is no longer present. Which action determines which user is responsible for the change?

- A. Inspect the server logs to see who was logging in to the APIC during the last few hours.
- **B. Evaluate the potential faults that are raised for that EPG.**
- C. Check the EPG audit logs for the "deletion" action and compare the affected object and user.
- D. Examine the health score and drill down to an object that affects the EPG combined score.

**Answer: B**

#### NEW QUESTION # 337

.....

Regularly updated material content to ensure you are always practicing with the most up-to-date preparation material which covers all the changes that are made to the Implementing Cisco Application Centric Infrastructure (300-620) exam questions from TroytecDumps. Our preparation material is built in such a way that it will help everyone even a beginner to reach his goal of clearing the Cisco 300-620 Exam Dumps from TroytecDumps just in one attempt.
