Workday Workday-Pro-HCM-Reporting日本語版受験参考書 & Workday-Pro-HCM-Reporting専門知識内容

これは高効率の時代であり、WorkdayおそらくWorkday-Pro-HCM-Reporting証明書を通じてのみ競争力を証明する方法が最も簡単です。ただし、他の問題に巻き込まれる可能性があるため、多くの人にとって時間は限られています。ShikenPASS Workday-Pro-HCM-Reporting学習教材を使用すると、すべての問題が疑いなく簡単に解決されます。信頼できる有効なWorkday-Pro-HCM-Reporting試験トレントだけでなく、最も柔軟な学習方法も提供できます。また、他の多くのお客様と同様に、Workday Pro HCM Reporting Certification Exam試験に合格する必要があります。

Workday Pro HCM Reporting Certification Exam 認定 Workday-Pro-HCM-Reporting 試験問題 (Q49-Q54):

質問 # 49

You are building a composite report that uses two subreports with different data sources. You are noticing duplicate prompts when you run your composite report.

How can you resolve this problem?

- A. Configure a prompt set on the composite report in the Report Settings.
- B. Select the Do Not Prompt at Runtime for one of the duplicate prompts in the Report Settings.
- C. Configure the same default value for each duplicate prompt.
- D. Select the Do Not Prompt at Runtime checkbox for the overlapping prompts in each subreport.

正解: A

解説:

Duplicate prompts occur in composite reports when multiple subreports request similar or identical inputs, such as Company, Date, or Organization. The recommended and most scalable solution is to use a Prompt Set configured at the composite report level. Prompt sets allow you to consolidate duplicate prompts into a single prompt, which is then mapped to the corresponding prompts in each subreport. This ensures a clean user experience and consistent filtering across all subreports.

From the Workday HCM Reporting documentation:

"Composite reports support prompt sets to consolidate duplicate prompts across subreports."

"Configure prompt sets in the composite report's Report Settings to eliminate redundant user prompts." The other options are not best practice: default values do not remove duplicate prompts, suppressing prompts reduces flexibility, and managing prompts individually in subreports defeats the purpose of composite-level control.

質問 # 50

You only want to show snapshot data on a custom trending report that uses the Trended Workers data source.

How can you achieve this with minimal impact to report performance?

- A. Add a report filter using the Snapshot field.
- B. Configure the default value of the Record Type prompt.
- C. Run the Maintain Trended Workers task and configure the default record type.
- D. Use the Trended Workers for Planning data source filter.

正解: A

解説:

The Trended Workers data source contains both snapshot records (period-end views of worker data) and event/transaction records (such as hires, terminations, and job changes). When the reporting requirement is to display only snapshot data, the most efficient and least disruptive approach is to apply a report-level filter using the Snapshot (or Record Type = Snapshot) field.

Workday HCM Reporting documentation explains that filtering at the report level allows the system to limit returned records without changing global trending configurations or requiring additional processing. This approach has minimal performance impact because it operates on already-generated trended data rather than forcing the system to recalculate or regenerate records.

Relevant documentation guidance includes:

"Trended Workers includes both snapshot and transaction records. Use report filters to restrict output to snapshot data when required."

"Avoid changing system-wide trending configurations when report-level filtering satisfies the business requirement." The other options are less appropriate:

Setting default prompt values still allows non-snapshot data to be retrieved.

Trended Workers for Planning is a different data source with a different purpose.

Running Maintain Trended Workers changes system configuration and impacts all trending reports.

質問 # 51

You need a calculated field that returns whether or not the initiator for a Manage Goals event is the worker's manager.

- A. Evaluate Expression Band
- B. True/False Condition

- C. Evaluate Expression
- D. Lookup Related Value

正解: B

解説:

The True/False Condition calculated field is used to return Boolean results (True or False) based on defined criteria. In this scenario, the field must evaluate whether the event initiator equals the worker's manager. By setting that condition, the calculated field will return True if the initiator is the manager and False otherwise.

From Workday Reporting documentation:

"True/False Condition - Creates a Boolean field that evaluates a condition and returns True or False depending on whether the condition is met." Thus, the correct answer is B. True/False Condition.

質問 # 52

An HR analyst has many visualizations in different discovery boards that use the Workers for HCM Reporting data source on the Worker primary business object. The analyst wants to drill into one of the visualizations by Worker. Upon drilling, the analyst notices that Worker is not a listed Drill By field option. They want to drill by Worker without editing the Drill By list of the other visualizations.

How would the analyst configure this?

- A. Create a control from a sheet filter and filter the data by Worker from the Control Panel.
- B. Add Worker as a Drill By field from the Maintain Field Lists for Discovery Boards report.
- C. Drag and drop the Worker field in one of the dimensions of this visualization in the Builder Panel.
- D. Override the Drill By field list and add Worker in the Configuration Panel for this visualization.

正解: D

解説:

In Discovery Boards, drill behavior is defined in the Drill By field list. To add Worker as a drillable option in just one visualization, the analyst can override the Drill By list in the Configuration Panel of that visualization. This allows Worker to appear as a drill dimension without altering the defaults applied across other visualizations.

From the Workday documentation: "You can override Drill By field lists in the visualization configuration panel. This enables drill customization on a per-visualization basis without impacting other discovery boards." The other options are less appropriate: Maintain Field Lists changes the default for all boards; adding Worker as a dimension affects grouping, not drilling; and sheet filter controls allow filtering but do not add drill options.

Thus, the correct choice is D. Override the Drill By field list and add Worker in the Configuration Panel for this visualization.

質問 # 53

You are building a composite report that uses two subreports with different data sources. You are noticing duplicate prompts when you run your composite report.

How can you resolve this problem?

- A. Configure a prompt set on the composite report in the Report Settings.
- B. Select the Do Not Prompt at Runtime for one of the duplicate prompts in the Report Settings.
- C. Configure the same default value for each duplicate prompt.
- D. Select the Do Not Prompt at Runtime checkbox for the overlapping prompts in each subreport.

正解: A

解説:

When using multiple subreports in a composite report, duplicate prompts often occur if both subreports request similar information (e.g., Company, Date, or Supervisory Organization). The best practice in Workday is to configure a Prompt Set at the composite level. Prompt sets allow you to consolidate duplicate prompts into one, mapping the same input across multiple subreports.

From the Workday documentation: "Composite reports allow prompt consolidation through Prompt Sets. Configure prompt sets in the composite report's Report Settings to eliminate duplicate prompts and provide a streamlined user experience." Other answers are less efficient: assigning the same default value does not eliminate duplication, suppressing prompts with "Do Not Prompt at Runtime" removes flexibility for end users, and handling only one duplicate prompt does not consolidate across subreports.

Therefore, the correct solution is A. Configure a prompt set on the composite report in the Report Settings.

質問 #54
