PassTIP 안에는 아주 거대한IT업계엘리트들로 이루어진 그룹이 있습니다. 그들은 모두 관련업계에서 권위가 있는 전문가들이고 자기만의 지식과 지금까지의 경험으로 최고의 IT인증관련자료를 만들어냅니다. PassTIP의 Plat-Admn-201문제와 답은 정확도가 아주 높으며 한번에 패스할수 있는 100%로의 보장도를 자랑하며 그리고 또 일년 무료 업데이트를 제공합니다.

최신 Salesforce Certified Administrator Plat-Admn-201 무료샘플문제 (Q95-Q100):

질문 # 95

A Platform Administrator wants to customize the navigation menu for users in the Salesforce mobile app. The organization has not yet implemented any Lightning apps for mobile use. Which statement about the Mobile Only app navigation is correct?

- A. The first four items in the Mobile Only navigation menu appear both in the navigation menu and in the navigation bar at the bottom of the screen.
- B. The Mobile Only app automatically includes all standard Salesforce objects in the navigation menu based on user permissions.
- C. The Mobile Only app can be customized to show different navigation menus for different user profiles and permission sets.
- D. Lightning pages and Visualforce pages automatically appear in the Mobile Only navigation menu without requiring tabs to be created first.

정답: A

설명:

The Mobile Only app is the default navigation experience in the Salesforce mobile app when no other Lightning apps have been assigned to a user for mobile use⁶⁴. In this configuration, the navigation menu is controlled globally via the "Salesforce Navigation" setup page⁶⁵⁶⁶. A key behavior of this interface is that the first four items placed in the navigation list become the "persistent" icons that appear in the navigation bar at the bottom of the mobile screen for quick access⁶⁶. These same items also appear at the top of the "Menu" tab⁶⁷. Option A is incorrect because pages must have a corresponding Tab created before they can be added to the navigation menu⁶⁸. Option B is incorrect because the "Mobile Only" navigation is a single global setting for the entire org; if you need different menus for different profiles, you must create and deploy specific Lightning Apps⁶⁹. Option D is incorrect because standard objects do not appear automatically; the administrator must explicitly add them to the navigation list in Setup⁷⁰. Understanding this behavior is essential for ensuring mobile users have a streamlined and intuitive interface

질문 # 96

A sales rep has a list of 300 accounts with contacts that they want to load at one time. Which tool should a Platform Administrator utilize to import the records to Salesforce?

- A. Data Loader
- B. Data Import Wizard
- C. Dataloader.io
- D. Manual Import

정답: B

설명:

The Data Import Wizard is the ideal tool for importing a relatively small number of records (up to 50,000) when those records involve standard objects like Accounts and Contacts simultaneously. One of the unique strengths of the Data Import Wizard is its ability to handle "Account and Contact" imports in a single pass, automatically linking the contacts to the correct accounts based on name or site. Because the volume in this request is only 300 records, the Data Import Wizard provides a simple, browser-based interface that includes built-in duplicate checking, which is highly beneficial for maintaining data quality. While the Data Loader (Option D) and Dataloader.io (Option A) can also handle 300 records, they are typically reserved for much larger datasets (up to 5 million records) or more complex objects. The "Wizard" is the most user-friendly and efficient choice for this specific sales rep request.

질문 # 97

Management at Universal Containers would like to share dashboard components with their team in Chatter but currently does not have access to this capability. How should a Platform Administrator make this functionality available to management?

- A. Set View Dashboard As to the dashboard viewer.
- B. Enable dashboard feed tracking.
- C. Enable reporting snapshots.
- D. Select Download Chart on the component.

정답: B

설명:

To allow users to post snapshots of dashboard components and engage in discussions about data directly on the dashboard, the

Platform Administrator must enable Feed Tracking for dashboards. In Salesforce, Chatter Feed Tracking allows changes to records and interactions to be tracked and shared in the Chatter feed. For dashboards specifically, enabling this feature allows users to "Follow" a dashboard and use the "Post to Feed" functionality on individual dashboard components. This is highly effective for management teams who want to call out specific successes or areas of concern by tagging team members in a post that includes the visual chart. Reporting snapshots (Option A) are used for historical trend reporting, not social sharing. Downloading charts (Option B) is a manual file-handling process rather than an integrated social feature. Setting the "View Dashboard As" (Option C) determines data visibility but does not control Chatter functionality.

질문 # 98

How should a Platform Administrator provide users with individualized views of data on a dashboard?

- A. Set View Dashboard As to Another person.
- **B. Create a Dynamic Dashboard.**
- C. Set View Dashboard As to Me.
- D. Add a Dashboard Filter to change the dashboard view.

정답: B

설명:

A Dynamic Dashboard is a specific type of dashboard where the data displayed changes based on which user is currently viewing it. By setting the "View Dashboard As" property to "The logged-in user," the dashboard components will respect each individual user's sharing settings, role hierarchy, and record ownership. For example, if a sales rep views a dynamic dashboard, they might only see their own \$100k pipeline, while their manager viewing the same dashboard would see the team's combined \$1M pipeline. This eliminates the need for an administrator to create and maintain dozens of identical dashboards for different individuals. Dashboard Filters (Option A) allow users to narrow down data but do not change the fundamental "running user" security context. Setting the dashboard to run as "Me" (the admin) or "Another person" (Options C and D) creates a static view where everyone sees the same data, which is the opposite of providing an individualized view.

질문 # 99

Ursa Major Solar wants to automatically notify a manager about any cases awaiting a response from an agent for more than 2 hours after case creation. Which feature should a Platform Administrator use to fulfill this requirement?

- A. Assignment Rule
- B. Omni-Channel Supervisor
- C. Formula field
- **D. Case Escalation Rule**

정답: D

설명:

Case Escalation Rules are the dedicated tool for time-based notifications and reassignments in Service Cloud. The Platform Administrator can set an escalation rule entry that triggers when a case is "Older than 2 hours" and meets specific status criteria (e.g., Status = New). The rule can then be configured to send an Email Notification to a manager or a specific distribution list. This ensures that management is alerted to potential SLA breaches. Assignment Rules (Option A) only run when a case is first created. Formula fields (Option C) can calculate time but cannot send notifications. Omni-Channel Supervisor (Option D) allows for real-time monitoring but does not provide automated email alerting based on specific time-elapsing thresholds.
