Prep ISTQB-CTFL Guide - Real ISTQB-CTFL Question

The only aim of our company is to help each customer pass their exam as well as getting the important certification in a short time. If you want to pass your exam and get the ISTQB-CTFL certification which is crucial for you successfully, I highly recommend that you should choose the ISTQB-CTFL study materials from our company so that you can get a good understanding of the exam that you are going to prepare for. We believe that if you decide to buy the ISTQB-CTFL Study Materials from our company, you will pass your exam and get the certification in a more relaxed way than other people.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q173-Q178):

NEW QUESTION # 173
Which of the following s the most correct statement about state testing techniques?

- A. Static techniques can be used by inexperienced users.
- B. Static techniques can be used before all code is ready for execution
- C. Static techniques find more detects then dynamic techniques.
- D. Static techniques are always cheaper than dynamic techniques.

Answer: B

Explanation:
State testing techniques are a type of dynamic testing techniques that are based on the behavior of the system under test for different input conditions and events. Dynamic testing techniques require the system to be executed with test cases, whereas static testing techniques do not. Static testing techniques can be applied before the code is ready for execution, such as reviews, inspections, walkthroughs, and static analysis. Static testing techniques can help find defects early in the development process, improve the quality of the code, and reduce the cost and effort of dynamic testing. Reference = ISTQB Certified Tester Foundation Level (CTFL) v4.0 Syllabus, Chapter 4, Section 4.2.1, Page 281; ISTQB Glossary of Testing Terms v4.0, Page 292

NEW QUESTION # 174
Which of the following statements about Experience Based Techniques (EBT) is correct?

- A. EBT is based on the ability of the test engineer to implement various testing techniques.
- B. EBT is done as a second stage of testing, after non-experienced-based testing took place.
- C. EBT use tests derived from the test engineers' previous experience with similar technologies.
- D. EBT require broad and deep knowledge in testing but not necessarily in the application or technological domain.

Answer: C

Explanation:
Experience based techniques (EBT) are techniques that use the knowledge, intuition and skills of the test engineers to design and execute tests. EBT use tests derived from the test engineers' previous experience with similar technologies, domains, applications or systems. EBT are not based on the ability of the test engineer to implement various testing techniques, but rather on their personal judgment and creativity. EBT are not done as a second stage of testing, after non-experience-based testing took place, but rather as a complementary or alternative approach to other techniques. EBT require broad and deep knowledge in both testing and the application or technological domain, as this can help the test engineer identify potential risks, scenarios or defects. NEW QUESTION # 175
A bank software has a feature of locking down accounts that have and overdraft higher than $10,000.
Due to a bug in the code, the system locks down accounts once they reached $1000 overdraft.
Based on this context, which of the following is correct statement

- A. It is an example of a defect that if goes undetected, will not cause any real harm to either the end customer or to the company (the bank)
- B. It is an example of a defect, that if goes undetected, will cause harm to the end customer but not to the company (the bank)
- C. It is an example of a defect that it goes undetected, will cause harm to the end customer and to the company (the bank)
- D. It is an example of a defect that if goes undetected, will not cause harm to the end customer, but will cause harm to the company (the bank)

Answer: C

Explanation:
A defect is a flaw in a component or system that can cause the component or system to fail to perform its required function. A defect can cause harm to the end customer, the company, or both, depending on the impact and severity of the failure. In this case, the defect in the code causes the system to lock down accounts that have an overdraft higher than $1000, instead of $10,000. This can cause harm to the end customer, as they may lose access to their funds and face inconvenience or financial difficulties. This can also cause harm to the company, as they may lose customer trust and satisfaction, face legal issues or complaints, or incur additional costs for fixing the defect and restoring the accounts. Verified Reference: [A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer], Chapter 1, page 3-4.

NEW QUESTION # 176
Which of the following statements is TRUE'?

- A. Unlike functional testing, non-fundional testing can only be applied to conventional systems, not artificial intelligence-based system.
- B. Black-box test techniques and experience-based test techniques may be applicable to both functional testing and non-functional testing
- C. Functional testing focuses on what the system is supposed to do, while white-box testing focuses on how well the system does what it is supposed to do
- D. Functional testing can be applied to all test levels, while non-functional testing can be applied only to system and acceptance test levels.

Answer: B

Explanation:
Statement D is correct. According to the ISTQB CTFL syllabus, both black-box test techniques (which focus on testing without internal knowledge of the application) and experience-based test techniques (which rely on testers' experience and intuition) can be applied to both functional and non-functional testing. Functional testing is concerned with what the system does, whereas non-functional testing looks at how the system performs under certain conditions. These techniques are versatile and can be employed to address both these aspects.

NEW QUESTION # 177
The following state transition diagram describes the functionality involved in a system using fingerprint and password authentication to log onto a system.
How many distinct states of the system are visible in the above diagram?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:
The state transition diagram provided shows three distinct states:
* Waiting for fingerprint
* Waiting for PIN
* Valid PIN/ask menu selection
Each state represents a different stage in the system's operation, with transitions based on user actions and system responses.
