2026 Latest Valid Braindumps MB-820 PDF Dumps and MB-820 Exam Engine Free Share: <https://drive.google.com/open?id=1XOCEoeP7AFESRUPbczRNUJKIWO7e8xm6>

Are you a fresh man in IT industry, or on the way to become an IT career? The MB-820 certification will help you learn professional skills to enhance your personal ability. With our MB-820 test engine, you set the test time as you like. Besides, you can make notes and do marks with MB-820 test engine. With the notes, you will have a clear idea about your MB-820 Exam Preparation. More practice make more perfect, so please take the MB-820 exam preparation seriously. Your dreams will come true if you pass the MB-820 exam certification. Trust Microsoft MB-820 exam dumps, you will never fail.

The field of information technology has seen multiple advancements lately. Reputed companies around the globe have set the Microsoft Dynamics 365 Business Central Developer MB-820 certification as criteria for multiple well-paid job roles. Only MB-820 certified will easily get high-paying posts in popular companies. Additionally, a Microsoft MB-820 Certification holder can climb the career ladder and get promotions within the current organization.

100% Pass Quiz Microsoft - MB-820 –High Hit-Rate Related Content

Do you have bought the Microsoft pdf version for your preparation? If not, hurry up to choose our MB-820 pdf torrent. Our MB-820 pdf study material is based on the MB-820 real exam scenarios covering all the exam objectives. You will find it is very helpful and precise in the subject matter since all the MB-820 Exam contents is regularly updated and has been checked and verified by our professional experts. MB-820 will help you to strengthen your technical knowledge and allow you pass at your first try.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q67-Q72):

NEW QUESTION # 67

You need to access the RoomsAPI API from the canvas app.

What should you do?

- A. Enable the APIs for the Business Central online environment.
- B. Use the default API configuration in Business Central
- C. Include in the extension a codeunit of type Install that publishes RoomsAPI.
- **D. Open the Web Services page and publish the RoomsAPI page as a web service.**

Answer: D

Explanation:

API Publishing for Extensions:

In Business Central, when creating custom APIs like RoomsAPI, it is important to ensure that they are automatically published during the installation or upgrade of the extension.

To achieve this, you can include a codeunit of type Install in the extension that explicitly publishes the custom API (RoomsAPI) as a

web service. This ensures that it is available for use immediately after the extension is deployed without requiring manual intervention.
Codeunit Type:

A codeunit of type Install runs when the extension is installed or upgraded. This type of codeunit can be used to perform setup tasks such as publishing web services or APIs like RoomsAPI.

Why Not Other Options?

Option A (default API configuration): This would not automatically publish the RoomsAPI. Default APIs do not cover custom APIs.

Option B (enable APIs for the environment): Enabling APIs in Business Central allows the standard APIs to be used, but custom APIs still need to be manually published.

Option C (publish via Web Services page): This would work but requires manual intervention to publish RoomsAPI, which does not fulfill the requirement of automatic publishing during installation.

DRAG DROP Documentation:

Publishing APIs in Extensions

Codeunit Types in Business Central

NEW QUESTION # 68

You need to parse the API JSON response and retrieve each order no. in the response body.

How should you complete the code segment? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

API JSON response

```
procedure ReadJsonData(Data: text)
var
    JToken: JToken;
    JObject: JsonObject;
    JArray: JsonArray;

    SubcontractingOrderNo: Code[20];
begin
    if Data = '' then
        exit;
    [ JToken.ReadFrom(Data) ];
    [ JObject.ReadFrom(Data) ];
    [ JObject.Get(Data) ];
    [ JToken.Read(Data) ];
    [ JToken.SelectToken('results'); ];
    [ JObject.SelectToken('results', JToken); ];
    [ JToken := JObject.SelectToken('results'); ];
    JArray := JToken.AsArray();
    foreach JToken in JArray do begin
        SubcontractingOrderNo := GetValueAsText(JToken,
            'order_no');
    end;
end;
```

Answer:

Explanation:

```

procedure ReadJsonData(Data: text)
var
  JToken: JToken;
  JObject: JObject;
  JArray: JSONArray;

  SubcontractingOrderNo: Code[20];
begin
  if Data = '' then
    exit;
  [ JToken.ReadFrom(Data) ];
  [ JObject.ReadFrom(Data) ];
  [ JObject.GetData() ];
  [ JToken.Read(Data) ];
  [ JToken.SelectToken('results') ];
  [ JObject.SelectToken('results', JToken) ];
  [ JToken.SelectToken('results') ];
  [ JToken := JObject.SelectToken('results') ];
  JArray := JToken.AsArray();
  foreach JToken in JArray do begin
    SubcontractingOrderNo := GetValueAsText(JToken,
      'order_no');
  end;
end;

```

Explanation:

API JSON response

```

procedure ReadJsonData(Data: text)
var
  JToken: JToken;
  JObject: JObject;
  JArray: JSONArray;

  SubcontractingOrderNo: Code[20];
begin
  if Data = '' then
    exit;
  [ JToken.ReadFrom(Data) ];
  [ JToken.SelectToken('results') ];
  JArray := JToken.AsArray();
  foreach JToken in JArray do begin
    SubcontractingOrderNo := GetValueAsText(JToken,
      'order_no');
  end;
end;

```

Code Segment Analysis:

- * The AL code is trying to read JSON data from a response and process it to extract subcontracting order numbers. It uses JToken, JObject, and JSONArray to work with the JSON data.
- * JToken.ReadFrom(Data): This line reads the incoming JSON data and converts it into a token. It processes the full JSON body so you can start working with it.
- * JToken.SelectToken("results"): This line selects the part of the JSON containing the results array. The key "results" is where the JSON response data is expected to be found.
- * JArray.AsArray(): Once the results are extracted, they are stored as an array, and each element in the array (which is expected to contain subcontracting order numbers) is processed.
- * SubcontractingOrderNo: The extracted order_no from the JSON is stored in this variable.

Breakdown of Steps:

- * JToken.ReadFrom(Data): This step reads the entire JSON response.
- * JToken.SelectToken("results"): This step selects the results array from the JSON response.
- * JArray.AsArray(): This step converts the selected results token into a JSON array that can be iterated over.
- * GetValueAsText(JToken, 'order_no'): This step retrieves the order_no from each element in the array.

Correct Code Completion:

- * JToken.ReadFrom(Data): This is the correct method to read the incoming JSON response, as it will convert the string into a

JsonToken that can be further processed.

* JToken.SelectToken("results"): This is the correct method to extract the results array from the token.

This method looks for the key "results" in the JSON and retrieves the relevant array.

Final Code Segment:

al

Copy code

```
procedure ReadJsonData(Data: text)
```

```
var
```

```
JToken: JsonToken;
```

```
JObject: JsonObject;
```

```
JArray: JsonArray;
```

```
SubcontractingOrderNo: Code[20];
```

```
begin
```

```
if Data = " then
```

```
exit;
```

```
JToken := JToken.ReadFrom(Data); // Step 1: Read the JSON response data.
```

```
JToken := JToken.SelectToken('results'); // Step 2: Select the "results" array.
```

```
JArray := JToken.AsArray(); // Convert the token into a JSON array.
```

```
foreach JToken in JArray do begin
```

```
SubcontractingOrderNo := GetValueAsText(JToken, 'order_no'); // Retrieve the order number.
```

```
end;
```

```
end;
```

* JToken.ReadFrom(Data): This reads the raw JSON data string and converts it into a JSON token that can be processed.

* JToken.SelectToken("results"): This extracts the results array from the JSON data.

* JArray.AsArray(): Converts the token into an array so we can iterate over it.

* GetValueAsText(JToken, 'order_no'): Extracts the order_no value from each item in the array.

NEW QUESTION # 69

A company uses Azure Application Insights for Business Central online in its production environment.

A user observes that some job queues go into the failed state and require manual intervention.

You need to analyze job queue lifecycle telemetry.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Microsoft Dynamics 365 Business Central

Microsoft Dynamics 365 Business Central

traces

take 100

take

top

project

extend

where customDimensions.eventId == 'YOUREVENTID'

project timestamp

take

top

project

extend

, jobQueueObjectId = customDimensions.alJobQueueObjectId

, jobQueueObjectType = customDimensions.alJobQueueObjectType

, jobQueueExecutionNumberOfAttemptsToRun

customDimensions.alJobQueueNumberOfAttemptsToRun

Answer:

Explanation:

```

Kusto Query Language (KQL) job queue analysis code segment

traces
| take 100
| top
| project
| extend
| where customDimensions.eventId == 'YOUR EVENT ID'
| project timestamp
| take
| top
| project
| extend
, jobQueueObjectId = customDimensions.alJobQueueObjectId
, jobQueueObjectType = customDimensions.alJobQueueObjectType
, jobQueueExecutionNumberOfAttemptsToRun
customDimensions.alJobQueueExecutionNumberOfAttemptsToRun

```

Explanation:

```

Kusto Query Language (KQL) job queue analysis code segment

traces
| take 100
| where customDimensions.eventId == 'YOUR EVENT ID'
| project timestamp
, jobQueueObjectId = customDimensions.alJobQueueObjectId
, jobQueueObjectType = customDimensions.alJobQueueObjectType
, jobQueueExecutionNumberOfAttemptsToRun
customDimensions.alJobQueueExecutionNumberOfAttemptsToRun

```

KQL Code Segment:

- * First command (traces):
- * The query begins with traces to analyze telemetry data logs. The next command determines how the results are filtered or displayed.
- * take 100: This is the correct option to retrieve the top 100 rows from the traces table.
- * Command for selecting fields:
- * project: This command is used to select specific fields from the telemetry data, allowing you to retrieve and display only the fields relevant to the job queue telemetry.
- * The correct answer is project, as it allows you to choose fields like jobQueueObjectId, jobQueueObjectType, etc., from the customDimensions table.

NEW QUESTION # 70

You are creating a test codeunit for a company that uses Business Central. The company requires the following list of choices while posting a sales order:

- * Ship
- * Invoice
- * Ship & Invoice

You must create a test codeunit that automatically selects one of these options. You need to create the test codeunit. Which handler should you use?

- A. SendNotificationHandler
- **B. StrMenuHandler**
- C. SessionSettings Handle'
- D. Recall Notification Hand let

Answer: B

Explanation:

StrMenuHandler is used to simulate the selection of an option from a string-based menu, such as the "Ship," "Invoice," or "Ship & Invoice" options when posting a sales order. This handler allows you to programmatically select an option during automated testing. Other handlers, such as SessionSettingsHandler or SendNotificationHandler, do not simulate the selection of menu choices, which is specifically required in this scenario.

For more details on StrMenuHandler and how it simulates user interaction with menu choices, refer to the Test Handlers in Business Central.

NEW QUESTION # 71

You are developing a test application to test the posting process of a sales order. You must provide the following implementation:

- * Specify the value of post options (dialog: Ship, Invoice, Ship & Invoice) as Invoice.

* Perform calculations and values checking.

You need to complete the development of the test codeunit.

Which methods should you use? To answer, move the appropriate methods to the correct implementation. You may use each method once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.
