SalesforceのOmniStudio-Consultant認定試験を一回合格するためには必ず良い準備しなければなりません。完全な知識がこの高度専門の試験に合格するのは必要でShikenPASSは君にこれらの資源を完全な需要に備わっています。

Salesforce Certified OmniStudio Consultant 認定 OmniStudio-Consultant 試験問題 (Q30-Q35):

質問 # 30

A business has a requirement to display an account and all of the associated contacts on a page. The number of contacts will vary for each account. For each contact, the page should display first name, last name, email, and phone number with options to edit the contact information or send a message. The primary contact for an account should be highlighted with a blue border.

Which two FlexCards features should the consultant recommend to meet these requirements?

Choose 2 answers

- A. Repeat Block
- B. Data table
- C. Flyouts
- D. States

正解: A、B

解説:

The two FlexCard features that the consultant should recommend to meet these requirements are Datatable and Repeat Block. A Datatable element can display a list of records in a tabular format, with columns for each field and rows for each record. The consultant can use a Datatable element to display the contacts for an account, with options to edit or send a message. A Repeat Block element is a container that can display multiple instances of a FlexCard based on a data source. The consultant can use a Repeat Block element to display a FlexCard for each contact, and use a condition to apply a blue border for the primary contact.

質問 # 31

A business plans to implement new tools for their call center agents to increase efficiency and improve customer experience. The business needs to reduce new agent ramp-up time. During the discovery phase of the project, the business identifies the following requirements for the project:

- * Easy access to frequent processes
- * "At a glance" dashboards of customer information
- * Lists of customer bills, which are stored on an external system

Which two FlexCard benefits should the consultant highlight when presenting a proposed solution?

Choose 2 answers

- A. Display different actions based on context
- B. Allow customers to enter bill payment information
- C. Guide users through complex processes
- D. Display a 360° view of the customer

正解: A、D

質問 # 32

A health provider company is building a new application for its medical officers. The company wants to display medical test reports for patients. Medical test reports is a custom object, related to the Patients object. For each patient, the company needs to list each medical test report including the report name, date requested, and date generated. From each medical test report, the user should be able to take the following actions:

- * Approve
- * Print for Review
- * Send for Retest

Which OmniStudio tools should the consultant use to design a solution to meet these requirements?

- A. Salesforce list view with custom buttons/links
- B. Multiple FlexCards with single action
- C. Single FlexCard with multiple actions
- D. OmniScript with multiple Step elements

正解: C

質問 # 33

An Insurance company decides to use calculation procedures and matrices to calculate premium costs for new Insurance policies. Prices change very frequently, resulting In multiple copies of the rating or pricing tables. What is an advantage of calculation procedures that the consultant should highlight in this scenario?

- A. Allows aggregate functions
- **B. Allows text concatenation using algebraic operators**
- C. Allows AI integration to calculate next best offer using policy attributes
- D. Allows multiple versions that will execute based on when the request is made

正解: B

質問 # 34

A Data Mapper Load is used to create a Contact. If the LeadSource is not provided in the input, it should default to " Web ". How should an OmniStudio Consultant implement this default value rule within the Data Mapper?

- A. Set the default value using a required validation rule in the Data Mapper.
- B. Configure the field-level default value within the Salesforce Object Manager.
- **C. Define the value in the Default Value column of the mapping tab.**
- D. Enable the fallback value property in the Data Mapper Options tab.

正解: C

解説:

The correct place to define this behavior inside the Data Mapper Load is the mapping configuration, using the Default Value column for the mapped LeadSource field. A Data Mapper Load maps incoming JSON/XML /custom input data to Salesforce object fields and writes records to Salesforce. When an input node is not supplied, the mapping-level default value provides the fallback value for that field during the load operation. A validation rule would only validate data; it would not populate LeadSource. Salesforce Object Manager defaults can work in some object-level scenarios, but the requirement specifically says to implement the rule within the Data Mapper. There is no correct " fallback value property " answer here. Salesforce describes Data Mapper Loads as writing data to Salesforce objects and supporting field mapping, formulas, attributes, and default values.

質問 # 35
