

Integration-Architect valid Pass4sures torrent & Integration-Architect useful study vce

Our Integration-Architect exam questions have a very high hit rate, of course, will have a very high pass rate. Before you select a product, you must have made a comparison of your own pass rates. Our Integration-Architect study materials must appear at the top of your list. And our Integration-Architect learning quiz has a 99% pass rate. This is the result of our efforts and the best gift to the user. Our [Integration-Architect Study Materials](#) can have such a high pass rate, and it is the result of step by step that all members uphold the concept of customer first. If you use a trial version of Integration-Architect training prep, you will want to buy it!

Salesforce Integration-Architect exam is designed to validate the skills and knowledge required to architect and implement complex integrations with Salesforce. It is a certification exam offered by Salesforce for professionals who have experience in designing and implementing complex integrations with Salesforce. Integration-Architect exam tests the ability to design, develop, and implement secure, scalable, and efficient integrations between Salesforce and other systems.

It is a truth universally acknowledged that the exam is not easy but the related Integration-Architect certification is of great significance for workers in this field, I am glad to tell you that our company aims to help you to pass the Integration-Architect examination as well as gaining the related certification in a more efficient and simpler way. During nearly ten years, our Integration-Architect Exam Questions have met with warm reception and quick sale in the international market. Our Integration-Architect study materials are not only as reasonable priced as other makers, but also they are distinctly superior.

Salesforce Integration-Architect Certification Exam is a valuable certification for professionals who are looking to advance their careers in the field of Salesforce integration. It is an excellent way to demonstrate expertise and proficiency in designing and implementing complex integration solutions for enterprise-level organizations. With this certification, professionals can open doors to new opportunities and advance their careers in the field of Salesforce integration.

We even guarantee our customers that they will pass Salesforce Integration-Architect exam easily with our provided study material and if they failed to do it despite all their efforts they can claim a full refund of their money (terms and conditions apply). The third format is the desktop software format which can be accessed after installing the software on your Windows computer or laptop. The Salesforce Certified Integration Architect (Integration-Architect) has three formats so that the students don't face any serious problems and prepare themselves with fully focused minds.

Salesforce Certified Integration Architect Sample Questions (Q115-Q120):

NEW QUESTION # 115

KiA B2C Enterprise Customer has the following use case that involves processing payment from an external payment gateway service in Salesforce.

1. Customer requests Customer Service Representative (CSR) for a Service upgrade.
2. Customer provides credit card details to CSR for payment.
3. CSR submits payment information in Salesforce, and processed in a
4. CSR receives confirmation of payment.
5. CSR upgrades service for customer and confirms Customer.

external payment gateway.

This use case requires the CSR to obtain confirmation of payment before upgrading the service.

The integration with Payment gateway needs to be reliable and monitored for audit purposes.

The payment gateway service is an external RESTful service that the B2C Enterprise Customer has subscribed for.

What should an Integration Architect recommend for this integration?

- A. Build a custom Apex Callout to external Payment gateway service and provide success message to the CSR, the details of callouts and responses are logged for audit purposes.
- **B. Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes.**
- C. Use External Services feature to integrate gateway to Salesforce ensuring real-time updates the CSR and support post payment processes.
- D. Platform events allow integration to payment gateway through the exchange of real-time event data, platform events are scalable and secure.

Answer: B

Explanation:

Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes. This solution meets the requirements of integrating with an external RESTful service, ensuring real-time updates to the CSR, and supporting post payment processes. ESB stands for Enterprise Service Bus, which is a software architecture model that allows communication between different applications via a common bus. ESB can handle the callout to the payment gateway service, and provide error handling, logging, routing, transformation, and orchestration capabilities. ESB can also integrate with other systems or services that are involved in the post payment processes, such as billing, invoicing, or reporting.

NEW QUESTION # 116

What is the first thing an integration architect should validate if a callout from a Lightning web component to an external endpoint is failing?

- A. The endpoint domain has been added to Cross-Origin Resource Sharing.
- B. The endpoint URL has been added to Remote Site Settings.
- **C. The endpoint URL has been added to Content Security Policies.**

Answer: C

Explanation:

When an integration callout initiated from a Lightning Web Component (LWC) fails, the architect must distinguish between client-side and server-side security layers. Unlike Apex callouts, which are governed by Remote Site Settings at the server level, LWC requests originate directly from the user's browser.

Consequently, they are subject to the browser's Content Security Policy (CSP).

CSP is a security layer that helps detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. It prevents a website from loading content from a third party unless that domain is explicitly safe-listed. If an LWC attempts to connect to an external API endpoint that is not listed in the CSP Trusted Sites in Salesforce Setup, the browser will block the request before it is even sent, often returning a "Refused to connect because it violates the document's Content Security

Policy" error. While Cross-Origin Resource Sharing (CORS) is also a browser-level security mechanism, it must be configured on the external server to allow the browser to access its resources; however, the first validation step within the Salesforce environment for a failing LWC callout is ensuring the domain is allowed by the org's CSP.

NEW QUESTION # 117

Northern Trail Outfitters needs to present shipping costs and estimated delivery times to their customers. Shipping services used vary by region, and have similar but distinct service request parameters.

Which integration component capability should be used?

- A. Enterprise Service Bus to determine which shipping service to use, and transform requests to the necessary format.
- B. Outbound Messaging to request costs and delivery times from Shipper delivery services with automated error retry.
- C. APEX REST Service to implement routing logic to the various shipping service.
- D. Enterprise Service Bus user interface to collect shipper-specific form data.

Answer: A

NEW QUESTION # 118

Northern Trail Outfitters is seeking to improve the performance and security of outbound integrations from Salesforce to on-premise servers.

What should the Architect consider before recommending a solution?

- A. Considerations for using Deterministic Encryption
- B. External gateway products in use
- C. A Default gateway restrictions
- D. Shield Platform Encryption Limitations

Answer: B

NEW QUESTION # 119

A new Salesforce program has the following high level abstract requirement: Business processes executed on Salesforce require data updates between the internal systems and Salesforce Which three relevant details should a Salesforce Integration Architect seek to specifically solve for Integration architecture needs of the program?

Which three relevant details should a Salesforce Integration Architect seek to specifically solve for Integration architecture needs of the program?

Choose 3 answers

- A. Timing aspects - real-time/near real-time (synchronous or asynchronous), batch; update frequency.
- B. Source and Target system, Directionality, data volume & transformation complexity long with any middleware that can be leveraged.
- C. Integration Style Process based, Data based, Virtual integration.
E Core functional and non-functional requirements for User Experience design, Encryption needs, Community, and license choices.
- D. Integration skills, SME availability and Program Governance details.

Answer: A,B,C

Explanation:

Explanation

The correct answer is A, C, and D. These are three relevant details that a Salesforce Integration Architect should seek to specifically solve for Integration architecture needs of the program. These details can help the Integration Architect to understand the scope, requirements, and constraints of the integration solution, and to choose the appropriate tools, methods, and patterns. The details are: Source and Target system, Directionality, data volume & transformation complexity along with any middleware that can be leveraged. This detail can help the Integration Architect to identify the systems involved in the integration, the direction of data flow, the amount and complexity of data to be exchanged, and the middleware or platform capabilities that can facilitate the integration. Timing aspects - real-time/near real-time (synchronous or asynchronous), batch; update frequency. This detail can help the Integration Architect to determine the latency, reliability, and scalability requirements of the integration solution, and to choose the suitable integration protocols and techniques.

Integration Style - Process based, Data based, Virtual integration. This detail can help the Integration Architect to select the appropriate integration style that matches the business needs and objectives.

Process based integration focuses on orchestrating business processes across systems, data based integration focuses on synchronizing data across systems, and virtual integration focuses on providing a unified view of data across systems.

NEW QUESTION # 120

.....

We have a large number of regular customers exceedingly trust our Salesforce Certified Integration Architect practice materials for their precise content about the exam. You may previously have thought preparing for the Integration-Architect practice exam will be full of agony, actually, you can abandon the time-consuming thought from now on. Our practice materials can be understood with precise content for your information, which will remedy your previous faults and wrong thinking of knowledge needed in this exam. As a result, many customers get manifest improvement and lighten their load by using our Integration-Architect practice materials. Up to now, more than 98 percent of buyers of our practice materials have passed it successfully. Integration-Architect practice materials can be classified into three versions: the pdf, the software and the app version. So we give emphasis on your goals, and higher quality of our Integration-Architect practice materials.
