NCLEX-RN Free Practice Exams & Real NCLEX-RN Exams

Preparing NCLEX-RN exam is a challenge for yourself, and you need to overcome difficulties to embrace a better life. As for this exam, our NCLEX-RN training materials will be your indispensable choice. We are committed to providing you with services with great quality that will help you reduce stress during the process of preparation for NCLEX-RN Exam, so that you can treat the exam with a good attitude. I believe that if you select our NCLEX-RN study questions, success is not far away.

Passing the NCLEX-RN Exam is a critical step towards becoming a licensed registered nurse. In addition to passing the exam, nurses must also meet other requirements for licensure, such as completing a nursing program and passing a criminal background check. Once licensed, nurses must also fulfill continuing education requirements to maintain their license and stay up-to-date on the latest developments in nursing practice.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q182-Q187):

NEW QUESTION # 182

A 16-year-old student has a long history of bronchial asthma and has experienced several severe asthmatic attacks during the school year. The school nurse is required to administer 0.2 mL of 1/1000 solution of epinephrine SC during an asthma attack. How does the school nurse evaluate the effectiveness of this intervention?

- A. Increased pulse rate

- B. Increased respiratory rate
- **C. Decreased inspiratory difficulty**
- D. Increased expectorate of secretions

Answer: C

Explanation:

Explanation

(A) A side effect of epinephrine is fatal ventricular fibrillation owing to its effects on cardiac stimulation. (B) Medications used to treat asthma are designed to decrease bronchospasm, not to increase expectorate of secretions. (C) Epinephrine decreased inspiratory difficulty by stimulating α_1 and α_2 -receptors causing sympathomimetic stimulation (e.g., bronchodilation). (D) The person with asthma fights to inspire sufficient air thus increasing respiratory rate.

NEW QUESTION # 183

A client with a head injury asks why he cannot have something for his headache. The nurse's response is based on the understanding that analgesics could:

- **A. Mask symptoms of increasing intracranial pressure**
- B. Elevate the blood pressure
- C. Counteract the effects of antibiotics
- D. Stimulate the central nervous system

Answer: A

Explanation:

(A) Analgesic medication does not counteract the effects of antibiotics. (B) Analgesic medication may lower blood pressure elevated due to anxiety. (C) Analgesic medication, especially CNS depressants, is not given if there is danger of increasing ICP, because neurological changes may not be apparent. Also, further depression of the CNS is contraindicated. (D) Analgesics do not stimulate the CNS.

NEW QUESTION # 184

A pregnant woman at 36 weeks' gestation is followed for PIH and develops proteinuria. To increase protein in her diet, which of the following foods will provide the greatest amount of protein when added to her intake of 100 mL of milk?

- A. One small scoop (90 g) vanilla ice cream and 1 tbsp chocolate syrup
- B. Fifty milliliters light cream and 2 tbsp corn syrup
- **C. Thirty grams powdered skim milk and 1 egg**
- D. One package vitamin-fortified gelatin drink

Answer: C

Explanation:

(A) This choice would provide more unwanted fat and sugar than protein. (B) Skim milk would add protein. Eggs are good sources of protein while low in fat and calories. (C) The benefit of protein from ice cream would be outweighed by the fat content. Chocolate syrup has caffeine, which is contraindicated or limited in pregnancy. (D) Although most animal proteins are higher in protein than plant proteins, gelatin is not. It loses protein during the processing for food consumption.

NEW QUESTION # 185

An elective saline abortion has been performed on a 3- week primigravida. Following the procedure, the nurse should be alert for which early side effect?

- **A. Thirst**
- B. Diabetes insipidus
- C. Water satiety
- D. Edema

Answer: A

Explanation:

Explanation/Reference:

Explanation:

(A) If the client is experiencing water satiety, there is no more desire for water. (B) Absorption of saline into circulation rather than into amniotic sac increases serum sodium and desire for water. (C) Edema can be a late side effect caused by water intoxication. (D) Diabetes insipidus occurs as a result of deficient antidiuretic hormone.

NEW QUESTION # 186

Nursing interventions designed to decrease the risk of infection in a client with an indwelling catheter include:

- A. Change the catheter tubing and bag every 48 hours
- **B. Cleanse area around the meatus twice a day**
- C. Maintain fluid intake of 1200-1500 mL every day
- D. Empty the catheter drainage bag at least daily

Answer: B

Explanation:

Explanation/Reference:

Explanation:

(A) Catheter site care is to be done at least twice daily to prevent pathogen growth at the catheter insertion site. (B) Catheter drainage bags are usually emptied every 8 hours to prevent urine stasis and pathogen growth. (C) Tubing and collection bags are not changed this often, because research studies have not demonstrated the efficacy of this practice. (D) Fluid intake needs to be in the 2000-2500 mL range if possible to help irrigate the bladder and prevent infection.

NEW QUESTION # 187

.....

All contents are masterpieces from experts who imparted essence of the exam into our NCLEX-RN practice materials. So our high quality and high efficiency NCLEX-RN practice materials conciliate wide acceptance around the world. By incubating all useful content NCLEX-RN practice materials get passing rate from former exam candidates of 98 which evince our accuracy rate and proficiency. If your problems are divulging during the review you can pick out the difficult one and focus on those parts.
