**MONITORIZAREA
PROPRIEI LECTURI**

TESTUL 1

Citește fragmentele de mai jos și rezolvă cerințele, dovedind că ai înțeles rolul pe care îl au cărțile în evoluția societății, în viața oamenilor.

A. „[...] Mi-am amintit de curând, cu totul întâmplător, ce extraordinară impresie mi-a făcut o carte pe care am citit-o în adolescență. Nu aveam decât 13 sau 14 ani, când mi-a căzut în mână o colecție de biografii intitulată *Viețile unor bărbați iluștri*, de Cornelius Nepos, în vechea *Biblioteca pentru toți* de la Editura Minerva. Despre traducător nu mai am nici cea mai mică idee. Era vorba, după toate probabilitățile, de o ediție prescurtată a singurului volum păstrat din opera lui Nepos (vechea BPT nu avea mai mult de o sută de pagini în format A6), la fel cu ediția din *Viețile paralele*, de Plutarh, pe care am descoperit-o nu mult mai târziu, căutând eu biografiile celebre ale Antichității, pentru care aceea a lui Nepos îmi trezise, s-ar zice, gustul. [...] Biografiile celor vechi mi-au trezit multe satisfacții. Și cred că nu exagerez dacă spun că ea m-a învățat să citeșc literatură. La vârsta cu pricina se trezea, fără s-o știu, și anume vocația de critic literar. Biografiile lui Nepos și Plutarh mi-au oferit esențialul pentru orice lectură critică: am înțeles că un text imninar lasă spații mari pentru interpretări diferite. [...]”

(Cum am învățat să citeșc literatura, de Nicolae Manolescu, în România literară nr. 21 din 30 mai 2001)

B. „[...] Am părăsit cam de multe pagini biblioteca strămătușii mele. O părăsisem și în realitate, acum aproape cincizeci de ani, constatând că i-am citit toate cărțile. Aveam nevoie de un spațiu vital mai mare. Așa am ajuns la Biblioteca publică din Râmnicu Vâlcea, care era adăpostită în clădirea impunătoare a fostului tribunal. Deasupra frontonului central, zeița legată la ochi a justiției primise în mâna dreaptă făclia culturii. Mă interesa mai puțin în acel moment să rețin metamorfozele femeii de piatră și nici treptele de piatră nu-mi rețineau atenția. Descoperisem o comoară: numărul cărților menționate în fișierul pentru public întrecea toate așteptările. Așa ceva nu mai văzusem. Am fost cuprins de o așa euforie, încât m-am hotărât pe loc să le citeșc pe toate. [...]”

(Cititul și scrisul, de Nicolae Manolescu)

Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q35-Q40):

NEW QUESTION # 35

Refer to the exhibit.

You are troubleshooting a network connectivity issue between two VMs that are deployed in Azure. One VM is a FortiGate that has one interface in the DMZ subnet, which is in the Production VNet. The other VM is a Windows Server in the Servers subnet, which is also in the Production VNet. You cannot ping the Windows Server from the FortiGate VM. What is the reason for this?

- A. By default, Azure does not allow ICMP traffic between subnets
- B. You have not created a VPN to allow traffic between those subnets
- C. The firewall in the Windows VM is blocking the traffic
- D. You have not configured a user-defined route for this traffic

Answer: C

Explanation:

The FortiGate VM and the Windows Server VM are in different subnets but within the same Production virtual network, which means they can communicate by default unless restricted. Azure allows ICMP between subnets, but Windows VMs have ICMP blocked by default in their firewall settings. Therefore, the likely reason for the ping failure is that the Windows Server's firewall is blocking ICMP (ping) traffic.

NEW QUESTION # 36

Your organization is planning to deploy FortiWeb in Azure to provide a web application security solution to its web servers. One of the requirements is to have granular control of the number of vCPUs and memory assigned to this resource.

Which cloud model could meet this requirement?

- **A. Infrastructure-as-a-Service (IaaS)**
- B. Software-as-a-Service (SaaS)
- C. Platform-as-a-Service (PaaS)
- D. Function-as-a-Service (FaaS)

Answer: A

Explanation:

Infrastructure-as-a-Service (IaaS) allows you to deploy FortiWeb as a virtual machine in Azure, giving you granular control over vCPU and memory allocation. This model provides full flexibility over the compute resources and network configuration, which is essential for deploying and scaling security appliances like FortiWeb.

NEW QUESTION # 37

What is a requirement when you deploy a FortiGate active-active cluster in Azure?

- **A. You must assign the public IP address to an Azure load balancer.**
- B. You must use unicast FGCP to synchronize the configurations.
- C. You must configure all FortiGate VMs with three or more interfaces.
- D. You must configure both load balancers to allow administrative access.

Answer: A

Explanation:

In an active-active FortiGate cluster deployment in Azure, you must assign the public IP address to an Azure load balancer. This is required because Azure does not support multiple VMs sharing a single public IP directly. The Azure Load Balancer handles inbound traffic and distributes it to the active FortiGate instances.

NEW QUESTION # 38

A Linux server was deployed in a protected subnet with a dynamic IP address. A FortiGate VM in the internal subnet provides traffic filtering to it, and you must implement a firewall policy using the IP address of the Linux server.

Which feature could help integrate FortiGate using Linux server tags?

- A. Targets Management
- **B. Software-defined network (SDN) connector**
- C. Service Fabric Cluster
- D. Microsoft Entra ID

Answer: B

Explanation:

The Software-defined network (SDN) connector allows FortiGate to dynamically pull metadata such as tags, IP addresses, and resource groups from Azure resources. This enables automatic policy updates based on dynamic IP changes, such as those of a Linux server in a protected subnet.

NEW QUESTION # 39

What is a key distinction between Azure Firewall and FortiGate VM in terms of their primary functions?

- **A. Azure Firewall is a cloud-native network security service, while FortiGate VM is a network virtual appliance (NVA) that provides comprehensive security functions.**
- B. Azure Firewall focuses on network traffic inspection, while FortiGate VM is primarily a web application firewall.
- C. Azure Firewall is designed exclusively for application layer filtering, while FortiGate VM is suitable for both on-premises and cloud environments.
- D. Azure Firewall and FortiGate VM have identical primary functions, and no features differentiation.

Answer: A

Explanation:

Azure Firewall is a cloud-native, fully managed network security service designed to control and log network traffic using Azure policies. In contrast, the FortiGate VM is a network virtual appliance (NVA) that delivers comprehensive security features, including firewalling, IPS, antivirus, VPN, and application control, suitable for both on-premises and cloud deployments.
