有些網站在互聯網上為你提供高品質和最新的Nutanix的NCP-EUC考試學習資料，但他們沒有任何相關的可靠保證，在這裏我要說明的是這Testpdf一個有核心價值的問題，所有Nutanix的NCP-EUC考試都是非常重要的，但在個資訊化快速發展的時代，Testpdf只是其中一個，為什麼大多數人選擇Testpdf，是因為Testpdf所提供的考題資料一定能幫助你通過測試，為什麼呢，因為它提供的資料都是最新的，這也是大多數考生通過實踐證明了的。

最新的 Nutanix Certified Professional (NCP) NCP-EUC 免費考試真題 (Q168-Q173):

問題 #168

An administrator plans to deploy a VMWare Horizon Solution on AHV. The administrator used the cluster command to verify if Shadow Clones are enabled in the AHV environment. This command shows the following output:

Which action should the administrator take to enable Shadow Clones?

- A. Execute the cluster enable -cluster_cluster_uid 0xxx - show_clones=true command.
- B. Connect to the AHV Host by SSH.

- C. Execute the `cluster edit-prams enable-shadow-clones=true` command.
- D. Connect to Prism Central

答案： A

解題說明：

an action that the administrator should take to enable Shadow Clones for a VMWare Horizon Solution on AHV is Connect to Prism Central and execute the `cluster enable -cluster cluster_uuid 0xxx - show clones=true` command. Shadow Clones are a feature that helps decrease read latency by creating local copies of frequently accessed data blocks on each host. To enable Shadow Clones, the administrator needs to connect to Prism Central and run a cluster command with the appropriate parameters.

問題 #169

What are the two types Of Launchpads that exist in Frame? (Choose two.)

- A. Application Launchpad
- B. VDI Launchpad
- C. Desktop Launchpad
- D. user Launchpad

答案： A,C

問題 #170

An administrator is asked to configure a container to support 2000 non-persistent linked clone desktops. What is the optimal configuration of this container?

- A. Compression and Deduplication
- B. Deduplication Only
- C. Compression, Deduplication, and ECX
- D. Compression Only

答案： D

解題說明：

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix storage best practices for Virtual Desktop Infrastructure (VDI), the optimal configuration for Linked Clones is Compression Only.

* Linked Clones and Data Efficiency: In a Linked Clone environment, the Virtual Machines (VMs) already share a common base image (replica disk) at the hypervisor level. Because the identical operating system data is already shared via the cloning technology, the Nutanix Distributed Storage Fabric (DSF) manages this duplicate data efficiently without needing the Deduplication feature enabled on the container.

* Redundancy of Deduplication: Nutanix technical documentation explicitly states that for Linked Clones or Nutanix VAAI clones, deduplication provides no additional benefit because the data is already single-instanced. Enabling deduplication in this scenario would introduce unnecessary metadata overhead without delivering significant capacity savings.

* Role of Compression: Inline Compression is recommended for almost all workloads, including VDI. It effectively reduces the size of the unique data written to the delta disks (user data, temp files, and logs) associated with non-persistent desktops, maximizing storage efficiency without the performance cost of deduplication.

* Shadow Clones: For the read-heavy workload of 2000 desktops accessing the same base image, Nutanix utilizes Shadow Clones (enabled by default) to cache the "hot" replica disk locally on every node, ensuring high performance during boot storms, rendering the need for "performance tier deduplication" redundant for linked clones.

Summary of Best Practice:

* Full Clones / Persistent Desktops: Compression + Deduplication.

* Linked Clones / Non-Persistent Desktops: Compression Only.

問題 #171

There are 50 people in a legal department who are scheduled to have their laptops replaced with virtual desktops. Their application suite consists of Microsoft Office 365, Photoshop, and an Ip-based application internally developed by the company.

Which option minimizes management overhead of the gold image, while providing the users with access to their application suite?

- A. Citrix Virtual Apps virtual hosted desktop with the application suite built into the gold Image
- **B. Non-persistent MCS delivered virtual machines virtualizing the application suite**
- C. Remote Desktop Services virtualizing the application suite
- D. Persistent virtual machines with the application suite built into the gold image

答案： B

解題說明：

ersistent virtual machines are those that retain all the user's personal settings, files, and customizations after each session¹. Non-persistent virtual machines are those that reset to a predefined state after each session and do not save any user data². MCS (Machine Creation Services) is a Citrix feature that allows administrators to create and manage multiple virtual machines from a single master image³. Remote Desktop Services (RDS) is a Microsoft feature that allows users to access applications or desktops hosted on a remote server⁴. Citrix Virtual Apps is a Citrix feature that allows users to access applications hosted on a remote server or cloud⁵

問題 #172

Refer to the exhibit.

An administrator is deploying an Instant Clone desktop pool on an 8-node Nutanix cluster. The system displays a warning message, as shown in the exhibit.

What should the administrator do to resolve the issue?

- A. Safely ignore this warning
- B. use both VSA and Shadow Clones
- **C. Disable Shadow Clones**
- D. Enable View Storage Accelerator

答案： C

解題說明：

Shadow Clones are a unique feature of the AOS storage that enables distributed caching of virtual disks (vDisks) used by virtual machines¹. Shadow Clones provide effective caching optimization in distributed multireader scenarios, such as large VDI and cloud deployments².

The warning message you see indicates that Shadow Clones are disabled on your Nutanix cluster. This may affect the performance of your Instant Clone desktop pool, as it will not benefit from the caching optimization provided by Shadow Clones.
