| Duty A: Creating AV Solutions | 47% |
| Task 1: Gather Customer Information | 10% |
| Task 2: Conduct Initial Site Survey | 9% |
| Task 3: Evaluate Site Environment (acoustics, lighting, seating, finishing, etc.) | 9% |
| Task 4: Develop an AV Project Scope | 9% |
| Task 5: Design AV Solutions | 10% |
| Domain 2: Implementing AV Solutions | 27% |
| Task 1: Integrate AV Solutions | 10% |

AVIXA Certified Technology Specialist Sample Questions (Q235-Q240):

NEW QUESTION # 235

In which of the following scenarios would infrared (IR) wireless microphones be preferred?

- A. rooms with direct sunlight
- B. spaces where security is an issue
- C. large auditoriums
- D. conferences with high frequency fluorescent lights

Answer: B

Explanation:

Comprehensive Detailed Explanation with all Technology Specialist References:

Infrared (IR) wireless microphones are particularly useful in environments where security is crucial. Unlike RF (radio frequency) systems, IR systems use light waves within a specific room or area, which makes them more secure since the signal doesn't pass through walls. This containment ensures that the transmission remains private and prevents eavesdropping from outside the room. IR systems are ideal for environments like corporate boardrooms or government facilities where sensitive information might be discussed.

While large auditoriums (Option A) may use IR systems, they are generally limited to line-of-sight and aren't suitable for large spaces due to coverage limitations. Rooms with direct sunlight (Option B) and spaces with high-frequency fluorescent lights (Option D) can cause interference with IR signals, making them less reliable in these settings.

NEW QUESTION # 236

When planning video content with a client, it is important to get their Pantone data (PMS) to ensure

- A. the displayed logo is the proper size and style.
- B. the displayed colors match printed colors.
- C. the displayed type face is the correct size and style.
- D. their confidence monitor size is large enough.

Answer: B

Explanation:

Pantone data (PMS) is used to ensure color consistency between digital displays and printed materials. This is critical in branding to maintain accurate color representation across different mediums, particularly for logos and brand colors.

CTS Technology Specialist Reference

CTS guidelines on content creation emphasize color matching as a key consideration for client branding, often involving Pantone color standards to achieve consistency.

NEW QUESTION # 237

Which setting on the digital multimeter should be used to determine if a DC power supply has failed?

Select the correct measurement category by clicking anywhere within the measurement range.

☐

Answer:

Explanation:

☐

Explanation:

The correct setting is the section marked with "V#" (DC Voltage), specifically within the range that matches your expected DC power supply output, e.g., 20V under the "V#" section.

According to the AVIXA CTS Exam Guide, Chapter 6: Troubleshooting, checking if a DC power supply has failed requires measuring the DC output voltage. This involves setting your multimeter to the DC voltage (V#) range that covers the expected output.

From the guide:

"When testing a DC power source, use the DC voltage range on your digital multimeter. Begin with a higher range (e.g., 200V) to avoid damaging the meter, then narrow down for precision if needed." Avoid using resistance (Ω), AC voltage (V~), or current (A) ranges when checking voltage output.

NEW QUESTION # 238

Which is the MOST important factor during the development of an AV project scope?

- A. clients responsibility
- B. entire budget
- C. analyze the strategic plan
- D. stakeholders requirements

Answer: D

Explanation:

The most important factor during the development of an AV project scope is understanding stakeholders' requirements. This ensures the project aligns with the needs and expectations of those who will be using or impacted by the system, making it central to project success.

CTS Technology Specialist Reference CTS training underscores the importance of gathering detailed stakeholder requirements to define a project scope that meets the client's objectives and use cases.

NEW QUESTION # 239

Ambient noise PRIMARILY affects desired sound by

- A. canceling it out.
- B. enhancing it.
- C. complementing it.
- D. interfering with it.

Answer: D

Explanation:

Comprehensive Detailed Explanation with all Technology Specialist References:

Ambient noise is any unwanted background sound that can interfere with the clarity and intelligibility of the desired audio signal. In an AV setting, ambient noise can reduce speech intelligibility, making it harder for the audience to understand the speaker or experience the audio as intended.

Option B, "canceling it out," would refer to techniques like active noise cancellation, which isn't the primary effect of ambient noise on sound but rather a solution to it. Options A and D, "enhancing" and

"complementing," are not applicable because ambient noise typically detracts from audio quality rather than adding to it.
