UiPath-ADPv1 Exam Success and UiPath Exam UiPath-ADPv1 Simulator: UiPath (ADPv1) Automation Developer Professional Latest Released

UiPath exam guide have to admit that the exam of gaining the UiPath certification is not easy for a lot of people, especial these people who have no enough time. If you also look forward to change your present boring life, maybe trying your best to have the

UiPath-ADPv1 latest questions are a good choice for you. Now it is time for you to take an exam for getting the certification. If you have any worry about the UiPath-ADPv1 Exam, do not worry, we are glad to help you. Because the UiPath-ADPv1 cram simulator from our company are very useful for you to pass the exam and get the certification.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q43-Q48):

NEW QUESTION # 43

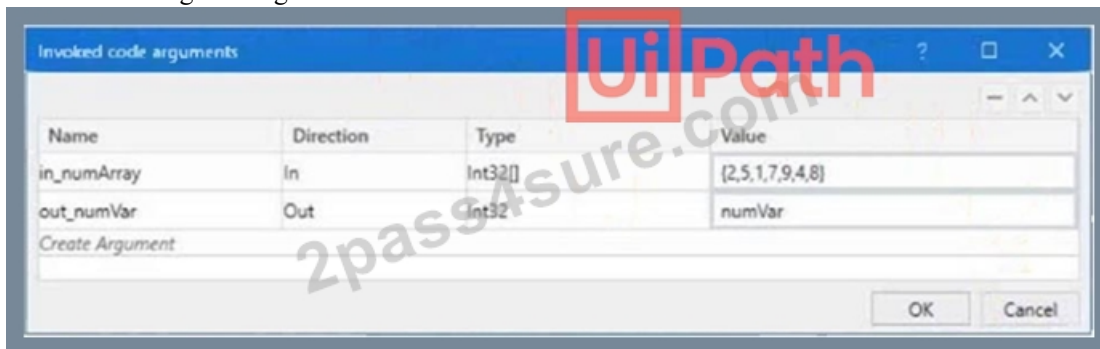

In the Robotic Enterprise (RE) Framework, at which point should a developer log a clear message with the Logging Level set to "Information," adhering to the best practices for automating a production-level process?

- A. Whenever the robot encounters an error on a Queue Item.
- **B. Whenever data is fetched from external sources.**
- C. Whenever an exception is caught in a Catch block.
- D. Whenever an argument or value is used.

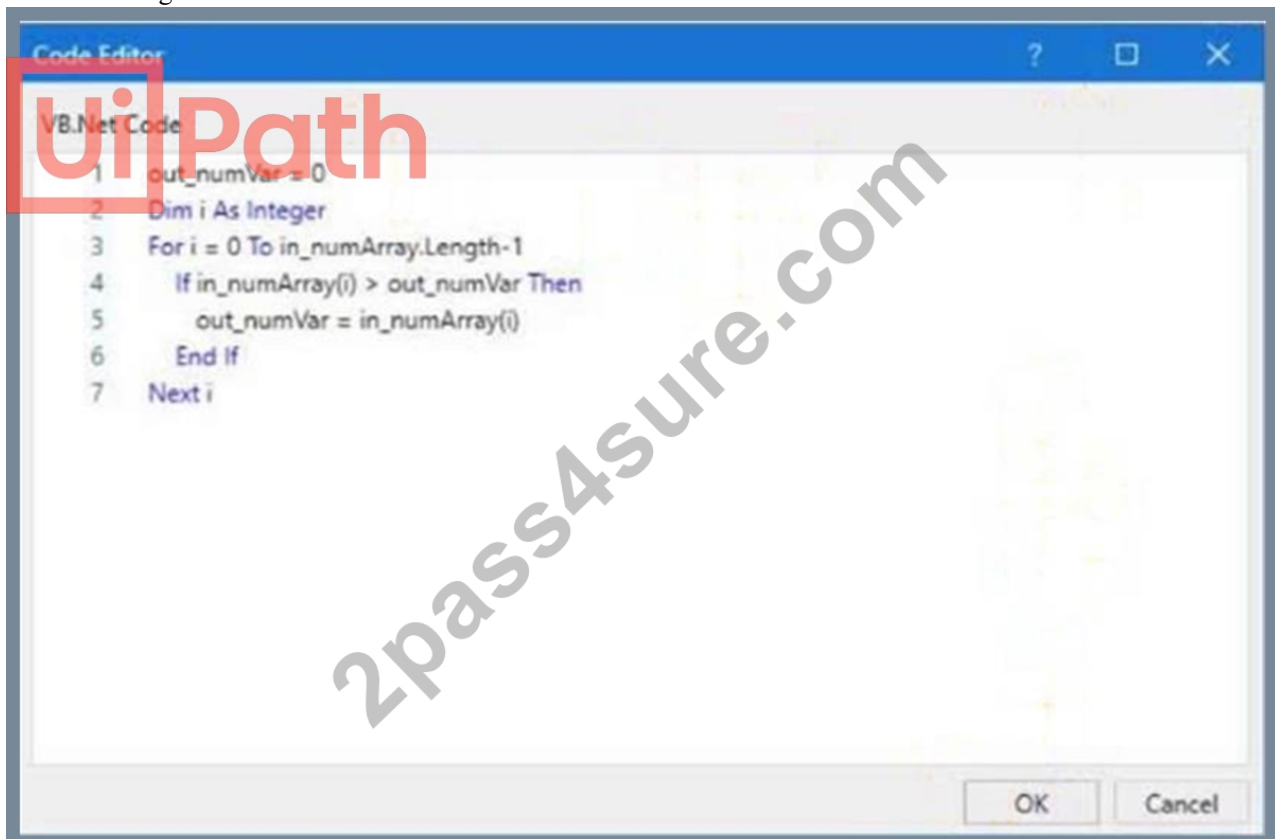

Answer: B

NEW QUESTION # 44

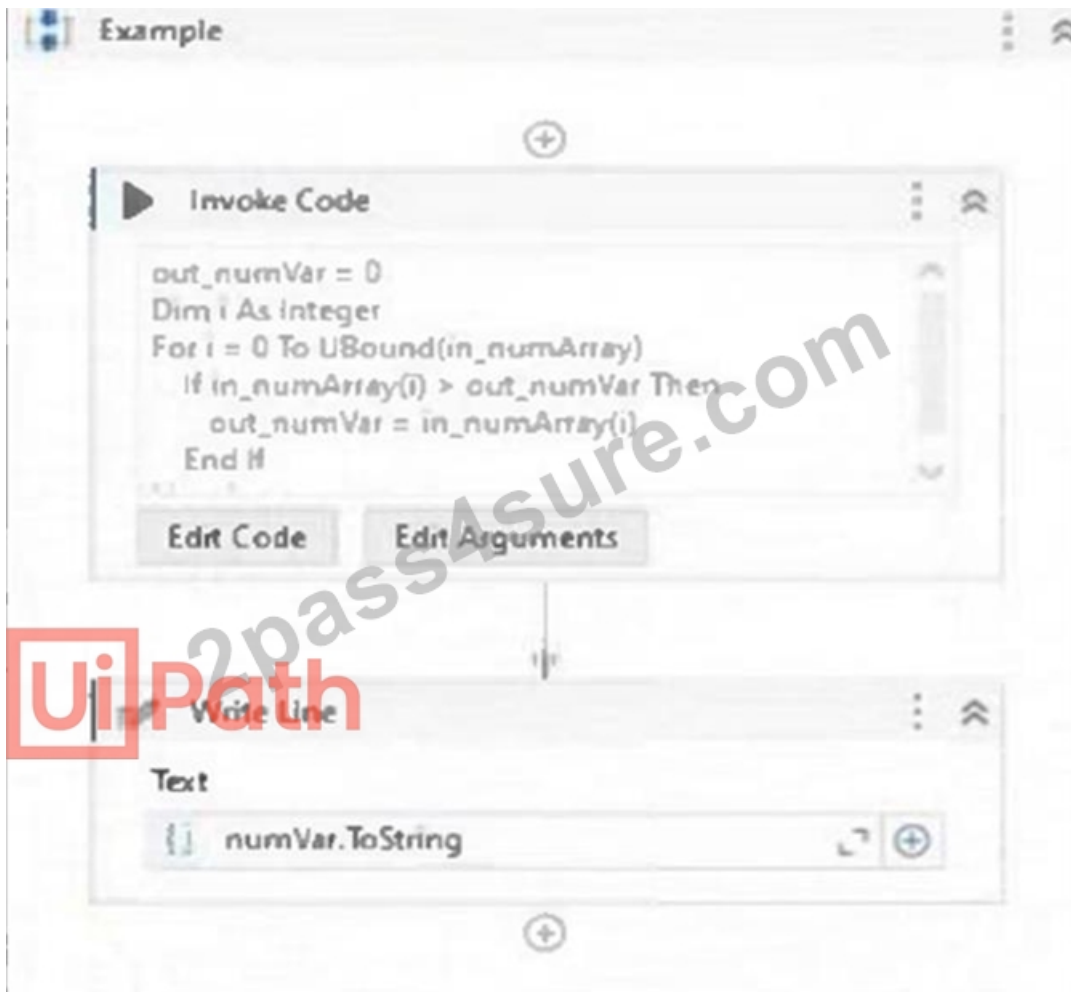

Given the following list of arguments:

and the following code:

What is the value that will be displayed in the Output Panel at the end of the sequence below:

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The value that will be displayed in the Output Panel at the end of the sequence is 9. This is because the code in the Invoke Code activity is looping through the array `in_numArray` and setting the variable `out_numVar` to the highest value in the array. The array `in_numArray` has the values {1, 2, 7, 9, 4} as shown in the list of arguments. The variable `out_numVar` is initialized to 0. The For loop iterates from 0 to the upper bound of the array, which is 4. In each iteration, the If condition checks if the current element of the array is greater than the current value of `out_numVar`. If it is, then `out_numVar` is assigned to the current element of the array. Otherwise, `out_numVar` remains unchanged. Therefore, after the first iteration, `out_numVar` becomes 1. After the second iteration, `out_numVar` becomes 2. After the third iteration, `out_numVar` becomes 7. After the fourth iteration, `out_numVar` becomes 9. After the fifth iteration, `out_numVar` remains 9, since 4 is not greater than 9. The Write Line activity outputs the value of `out_numVar` to the console, which is 9.

9. References: Invoke Code

NEW QUESTION # 45

A developer examines a workflow in which filenames are stored within a collection. The collection is initialized with a single filename. When adding a new filename to the collection, which collection variable type will cause an error?

- A. `System.Collections.Generic.Dictionary`
- B. `System.Array`
- C. `System.Collections.Generic.List`
- D. `System.Data.DataTable`

Answer: B

Explanation:

The collection variable type that will cause an error when adding a new filename to the collection is System.Array. This is because System.Array is a fixed-size collection that cannot be resized or modified once it is initialized. Therefore, if the collection is initialized with a single filename, it cannot accommodate any more filenames. To add a new filename to the collection, the developer should use a dynamic collection type, such as System.Collections.Generic.List or System.Data.DataTable, that can grow or shrink as needed. Alternatively, the developer can use System.Collections.Generic.Dictionary if the filenames need to be associated with some keys or values. References: [Array Class], [Collection Classes]

NEW QUESTION # 46

In UiPath Studio, when a developer executes a workflow in Debug mode and the process stops at a breakpoint, which panel enables the developer to assign values to variables prior to resuming the process?

- A. Immediate Panel and Watch Panel.
- B. Watch Panel and Breakpoint Panel.
- C. Locals Panel and Watch Panel.
- D. Locals Panel and Immediate Panel

Answer: D

Explanation:

In UiPath Studio, during debugging when a workflow hits a breakpoint, the developer can assign values to variables using both the Locals Panel and the Immediate Panel. This feature allows for dynamic testing and troubleshooting.

NEW QUESTION # 47

Consider testing a workflow that computes the sum of two numbers having the data driven test data from the Excel file below:

Number1	Number2	Sum
1	2	3
2	2	4
3	4	9

Expanding the functionality of the workflow to compute the sum of three numbers, the data needs to be updated as well to accommodate the new scenario:

Number1	Number2	Number3	Sum
1	2	2	5
2	2	3	7
5	4	1	10

What are steps to do that?

- A. Click Right on the Test Case and select Remove Test Data.
- B. Click Right on the Test Case and select Refresh Test Data
- C. Click Right on the Test Case and select Update Test Data
- D. Click Right on the Test Case and select Add Test Data.

Answer: B

NEW QUESTION # 48

.....

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional UiPath-ADPv1 Certification to pave the way for a better future. The UiPath-ADPv1 question dumps produced by our company, is helpful for our customers to pass their exams and get the UiPath-ADPv1 certification within several

days. Our UiPath-ADPv1 exam questions are your best choice.
