2V0-16.25考試心得 - 最新2V0-16.25題庫

KaoGuTi VMware的2V0-16.25考試培訓資料是個性價很高的培訓資料，與眾多培訓資料相比，KaoGuTi VMware的2V0-16.25考試培訓資料是最好的，如果你需要IT認證培訓資料，不選擇KaoGuTi VMware的2V0-16.25考試培訓資料，你將後悔一輩子，選擇了KaoGuTi VMware的2V0-16.25考試培訓資料，你將終身受益。

VMware 2V0-16.25 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
主題 2	<ul style="list-style-type: none">• VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.

主題 3	<ul style="list-style-type: none"> • Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.
主題 4	<ul style="list-style-type: none"> • Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
主題 5	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.

問題 #36

What are two roles of VMware Tools within a virtual machine (VM)? (Choose two.)

- A. Stores the virtual machine configuration files.
- B. Provides Guest OS heartbeat service.
- C. Provides journaling of file system metadata changes for fast recovery.
- D. Provides device drivers for the VM.
- E. Manages the virtual machine hardware configuration.

答案: B,D

解題說明:

VMware Tools is a suite of services and drivers installed in a VM. It provides:

* Guest OS heartbeat service (B): Used by vCenter to monitor VM health.

* Device drivers (C): Optimized drivers for network, storage, graphics, and mouse/keyboard integration.

Other options:

* A. Journaling of file system metadata# Provided by the guest OS filesystem, not VMware Tools.

* D. Stores VM configuration files# Handled by vCenter/ESXi, not VMware Tools.

* E. Manages VM hardware configuration# Done via vSphere Client, not VMware Tools.

問題 #37

What is the primary purpose of using VMware vSphere Foundation (VVF) Lifecycle Manager for ESX hosts?

- A. To monitor the performance of ESX hosts
- B. To configure network settings for ESX hosts
- C. To create and manage virtual machines
- D. To update and maintain the ESX host lifecycle

答案: D

解題說明:

The primary purpose of vSphere Lifecycle Manager (vLCM) is to:

- * Update, patch, and upgrade ESXi hosts, firmware, and drivers.
- * Manage host consistency across clusters with image-based lifecycle management.

Other options are unrelated:

- * A. Configure network settings# Done through vCenter or host client, not vLCM.
- * B. Monitor performance# Done in vCenter/VCF Operations, not vLCM.
- * C. Create/manage VMs# Managed through vCenter, not vLCM.

問題 #38

In VMware Cloud Foundation (VCF) Operations, which node type is responsible for providing fault tolerance for administrative functions within the VCF Operations cluster?

- A. Replica Node
- B. Primary Node
- C. Data Node
- D. Witness Node

答案: A

解題說明:

In VCF Operations (vRealize Operations) cluster architecture:

- * The Primary Node handles administration and management.
- * The Replica Node provides fault tolerance for the Primary Node, ensuring that administrative functions remain available in case of failure.
- * Data Nodes handle data collection and analytics.
- * Witness Node# Not a role in VCF Operations; relevant to vSAN clusters.

Thus, the node type providing fault tolerance for administrative functions is the Replica Node.

問題 #39

An administrator is tasked with creating dashboards to track system performance metrics for both the IT department and executive leadership. The requirements for this task are:

- * The IT team needs detailed, technical metrics across all of the infrastructure components in the environment.
- * The executives need high-level summaries that highlight Key Performance Indicators (KPIs) across the environment in a single dashboard.
- * The executives need to access the dashboard via a shared URL.
- * The dashboards must be capable of being shared, and always display the latest data collected when the link is used.

What two steps should the administrator perform to meet these requirements? (Choose two.)

- A. Use Out-of-the-Box dashboards in VCF Automation to highlight Key Performance Indicators.
- B. Use Out-of-the-Box dashboards in VCF Operations to display detailed technical metrics.
- C. Create a Custom dashboard in VCF Operations for Logs to display the Key Performance Indicators.
- D. Create a Custom dashboard in VCF Operations to highlight Key Performance Indicators.

答案: B,D

解題說明:

To satisfy both IT and executive requirements:

- * IT team# Needs detailed technical metrics, which are available through Out-of-the-Box dashboards in VCF Operations. (A)
- * Executives# Need a custom KPI-focused dashboard, with summaries and high-level visibility. This can be shared via a URL link that always shows the latest data. (B) Why others are incorrect:
- * C. Custom dashboard in VCF Operations for Logs# Logs are not KPI-focused performance metrics.
- * D. Out-of-the-Box dashboards in VCF Automation# VCF Automation is not designed for KPI reporting.

問題 #40

An administrator is tasked with adding a 96-core VMware ESX host to a VMware vSphere Foundation (VVF) 9.0 vCenter cluster. The vCenter has been previously licensed for 1024 cores and the existing hosts equal 960 cores. The administrator adds the host to the vCenter cluster and places the cluster back into production.

What issue will occur if the administrator performs no additional actions to this vCenter?

- A. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, the host will be limited to 64 cores until 32 cores or greater is added to the license.
- B. The new ESX host has been limited to 64 cores until more capacity is added to the license to license the host. Once 32 cores or greater is added to the license, the full 96 cores of the new host will be useable.
- C. The new ESX host will operate in evaluation mode until more capacity is added to the license to license the host. If the host is not licensed when the evaluation period expires, it is disconnected from the vCenter instance.
- D. No issue will occur. The new host was added to the vCenter cluster successfully and will operate for the valid period of the applied license.

答案： C

解題說明：

The vSphere Foundation 9.0 licensing model uses per-core licensing.

* Current license covers 1024 cores.

* Existing hosts = 960 cores, leaving 64 cores licensed.

* Adding a 96-core host # 32 cores exceed the license.

Result:

* The new host runs in evaluation mode.

* If not licensed after the evaluation period, the host is disconnected from vCenter.

Other options:

* A. Limited to 64 cores # Not how VMware licensing enforcement works.

* B. Limited to 64 cores until license upgrade # Incorrect; VMware does not partially disable cores.

* D. No issue # Incorrect; licensing compliance will cause issues.
