

# Plat-Dev-210 New Dumps Sheet, Valid Plat-Dev-210 Test Answers

BONUS!!! Download part of ValidExam Plat-Dev-210 dumps for free: <https://drive.google.com/open?id=1wth8ygRMmfG2yL6x8XNqdYIU1MscJIH>

ValidExam is the website that has been known to learn IT technology. ValidExam gets high praise from our customers in real test questions and answers. It is the real website that can help you to pass Salesforce Plat-Dev-210 certificate. Why is ValidExam very popular? Because ValidExam has a group of IT elite which is committed to provide you with the best test questions and test answers. Therefore, ValidExam will provide you with more and better certification training materials to satisfy your need.

## Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Expression Sets &amp; Decision Matrices:</b> This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.</li> </ul>

## Valid Salesforce Plat-Dev-210 Test Answers & Plat-Dev-210 Reliable Test Review

In this way, you can clear all your doubts and understand each topic well. Salesforce Dumps PDF are customizable and simulate the real Salesforce Certified Omnistudio Developer (Plat-Dev-210) test scenario. The desktop-based Plat-Dev-210 Practice Exam software works on Windows. The web-based Plat-Dev-210 practice exam is compatible with all operating systems and browsers.

### Salesforce Certified Omnistudio Developer Sample Questions (Q74-Q79):

#### NEW QUESTION # 74

In an Integration Procedure, a developer needs to perform a multi-step calculation on every element of an array. Based on best practices, what two methods are recommended?

Choose 2 answers

- A. Use a Set Values Element inside a Loop Block.
- B. Use a List Action to merge the array elements together.
- C. Use a Matrix Action to call a Calculation Matrix.
- D. Use a Calculation Action to call a Calculation Procedure.

**Answer: C,D**

Explanation:

According to the Integration Procedure Actions page, a Calculation Action can be used to "call a Calculation Procedure that performs calculations on input data" and a Matrix Action can be used to "call a Calculation Matrix that performs calculations on input data".

#### NEW QUESTION # 75

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy Community portal. The developer on the project decides to use an MiniScript.

How should the developer configure the OmniScript to provide this functionality?

- A. Use an Edit Block element configured with Remote Actions.
- B. Use an Input Block element and a DataRaptor Post Action element.
- C. Use a Text Block element and a Remote Action element.
- D. Use an Edit Block element configured with SOQL statements.

**Answer: A**

Explanation:

An Edit Block element configured with Remote Actions allows the developer to create a dynamic table that can display, add, edit, or delete records from a Salesforce object. The Remote Actions can be configured to perform CRUD operations on the object using SOQL or Apex.

#### NEW QUESTION # 76

A developer needs to create a list of cases for an account in a single Datable in a FlexCard. Like the one shown below.

Origin	Type	Subject	Status	In Child Card	Last Modified	Theme
Web	Mechanical	Generator won't start	New		2020-07-27 10:22:42 0002	Lightning
Phone	Electrical	Component missing	Escalated		2020-07-27 10:21:41 0002	Lightning
Phone	Electrical	Starting generator after electrical failure	Escalated		2020-07-27 12:28:20 0002	Lightning
Web	Other	Easy installation process	Closed		2020-03-27 15:28:20 0002	Lightning
Web	Mechanical	Shutting down of generator	Closed		2020-03-27 15:28:20 0002	Lightning
Phone	Electrical	Cannot start generator after electrical failure	Closed		2020-03-27 15:28:20 0002	Lightning

How can the developer configure the FlexCard to display the case records in this way?

- A. Enable the record Looping feature on the data table elements
- B. Disable the Repeat Record feature on the FlexCard setup tab
- C. Select the Repeatable Mode property on the data table elements
- D. Enable the Repeat Records feature on the FlexCard Setup tab

**Answer: C**

Explanation:

The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

**NEW QUESTION # 77**

A developer needs to build a DataRaptor Transform to send current weather to both an OmniScript Card Layout. Which of these samples would be valid for the Expected Output JSON?

```

{
  "Current": {
    "TempF": 53.1,
    "CityState": "Baltimore, MD",
    "TempC": 12.3
  }
}

```

- A.

```

{
  "Current": {
    "TempF": 53.1,
    "CityState": "Baltimore, MD",
    "TempC": 12.6
  }
}

```

- B.

```

{
  "Current:Temp": 53.1,
  "Current:CityState": "Baltimore, MD",
  "Current:TempC": 12.6
}

```

- C.

```

<root>
  <Current>
    <TempF>88.1</TempF>
    <CityState>Baltimore, MD</CityState>
    <TempC>31.7</TempC>
  </Current>
</root>

```

- D.

**Answer: B**

Explanation:

According to the Transform External Data Unit, the Expected Output JSON should match the Output Path of the DataRaptor Transform. In option D, the Output Path is Current:CityState, which matches the Expected Output JSON. The other options have different Output Paths that do not match the Expected Output JSON.

Therefore, the correct answer is D.

**NEW QUESTION # 78**

An Integration Procedure uses an HTTP action to make a REST API call. The response from the REST API must be converted into a specific XML structure before sending it as an input to another external web service.

How should the developer configure the Integration Procedure to meet this requirement?

- A. Use a Remote Action that calls the XMLStreamReader class.
- **B. Use a Remote Action that calls the XMLStreamWriter class.**
- C. Use a Data Mapper Transform to convert JSON to XML.
- D. Use a Data Mapper Extract and check the XML checkbox on the Output JSON Path.

**Answer: B**

Explanation:

OmniStudio does not natively support direct JSON-to-XML transformation using DataRaptors. When a transformation to specific XML formats is needed for integration with external web services, it is recommended to use Remote Actions that invoke custom Apex classes.

\* A. Use a Remote Action that calls the XMLStreamWriter class - Correct. The XMLStreamWriter Apex class provides precise control over XML structure and is the Salesforce-recommended way to programmatically generate XML from data within a Remote Action step in an Integration Procedure.

Incorrect Options:

\* B. The XML checkbox in DataRaptor does not convert JSON to XML; it defines output data format for display or API serialization.

\* C. XMLStreamReader is used for parsing XML, not for generating it.

\* D. DataRaptor Transforms only manipulate JSON structure; they do not support converting JSON into XML format.

:

Salesforce Developer Guide # Apex XMLStreamWriter Class

OmniStudio Integration Procedures # Using Remote Actions with Custom Apex

**NEW QUESTION # 79**

.....

The Salesforce Certified Omnistudio Developer (Plat-Dev-210) practice tests have customizable time and Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam questions feature so that the students can set the time and Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam questions according to their needs. The Salesforce Certified Omnistudio Developer (Plat-Dev-210) practice test questions are getting updated on the daily basis and there are also up to 1 year of free updates. Earning the Salesforce Certified Omnistudio Developer (Plat-Dev-210) certification exam is the way to grow in the modern era with high-paying jobs.
