

2026 Salesforce Analytics-Admn-201 Latest Online Test

2026 Latest PrepAwayTest Analytics-Admn-201 PDF Dumps and Analytics-Admn-201 Exam Engine Free Share:
<https://drive.google.com/open?id=1GJbBSsSfAL-GzSORaAWv2ZZs0Pmq5EI>

Analytics-Admn-201 test questions have a mock examination system with a timing function, which provides you with the same examination environment as the real exam. Although some of the hard copy materials contain mock examination papers, they do not have the automatic timekeeping system. Therefore, it is difficult for them to bring the students into a real test state. With Analytics-Admn-201 Exam Guide, you can perform the same computer operations as the real exam, completely taking you into the state of the actual exam, which will help you to predict the problems that may occur during the exam, and let you familiarize yourself with the exam operation in advance and avoid rushing during exams.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 2	<ul style="list-style-type: none"> Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 3	<ul style="list-style-type: none"> Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 4	<ul style="list-style-type: none"> Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Topic 5	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.

100% Pass Quiz Analytics-Admn-201 - Salesforce Certified Tableau Server Administrator –High Pass-Rate Online Test

As the old saying goes people change with the times. People must constantly update their stocks of knowledge and improve their practical ability. Passing the test Analytics-Admn-201 certification can help you achieve that and buying our Analytics-Admn-201 test practice materials can help you pass the Analytics-Admn-201 test smoothly. Our Analytics-Admn-201 study question is superior to other same kinds of study materials in many aspects. Our Analytics-Admn-201 test bank covers the entire syllabus of the test and all the possible questions which may appear in the test. You will pass the Analytics-Admn-201 exam for sure.

Salesforce Certified Tableau Server Administrator Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which three types of authentications can you use to implement single-sign-on (SSO) authentication to Tableau Server? (Choose three.)

- A. Security Assertion Markup Language (SAML)
- B. Kerberos with Active Directory
- C. Local Authentication
- D. OpenID Connect

Answer: A,B,D

Explanation:

Single Sign-On (SSO) allows users to authenticate once (e.g., via a corporate identity provider) and access Tableau Server without re-entering credentials. Tableau Server supports several SSO methods:

* OpenID Connect (OIDC): An OAuth 2.0-based protocol for SSO, configured via Tableau's SAML settings with an OIDC-compatible IdP (e.g., Google, Okta).

* Kerberos with Active Directory: A ticket-based SSO protocol, widely used in Windows environments with AD integration.

* SAML: A flexible SSO standard using XML assertions, supporting various IdPs (e.g., ADFS, PingFederate).

Let's evaluate:

* Option A (OpenID Connect): Correct. OIDC is an SSO method, implemented as a SAML variant in Tableau Server, enabling seamless login.

* Option C (Kerberos with Active Directory): Correct. Kerberos provides SSO in AD environments, delegating authentication to the domain controller.

* Option D (Security Assertion Markup Language - SAML): Correct. SAML is a core SSO method in Tableau, widely adopted for enterprise integrations.

* Option B (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, requiring manual credential entry-no SSO support.

Why This Matters: SSO enhances user experience and security by leveraging existing identity systems, reducing password fatigue.

Reference: Tableau Server Documentation - "Authentication" (https://help.tableau.com/current/server/en-us/auth_overview.htm).

NEW QUESTION # 34

You have an existing group subscription. You add a user to the group. What statement correctly describes the result?

- A. The subscription updates automatically to include the new user
- B. The administrator receives a notice to approve or deny adding the user to the subscription
- C. The creator of the subscription receives notice of the change and must manually edit the subscription to reflect the new group membership
- D. The subscription will continue to include only the members of the group at the time the subscription was made

Answer: A

Explanation:

Subscriptions in Tableau Server deliver workbook views to users via email on a schedule. Group subscriptions apply to all group members-let's unpack this:

* Group Subscription Mechanics:

* Created via Workbooks > Actions > Subscribe > Select Group.

* Delivers content to all users in the group at the time the subscription runs (e.g., daily PDF).

* Dynamic: Membership updates (additions/removals) are reflected automatically on the next run.

* Option C (The subscription updates automatically to include the new user): Correct.

* Details: When you add a user to the group (e.g., via Users > Groups > Add Users), Tableau Server's subscription process queries the group's current membership at runtime. The new user receives the subscription on the next scheduled delivery-no manual action needed.

* Example: Group "Sales" has a 9 AM subscription. Add a user at 8 AM-they get the email tomorrow at 9 AM.

* Option A (Admin receives notice to approve/deny): Incorrect.

* Why: No approval workflow exists for group membership changes in subscriptions-it's automatic.

* Option B (Creator must manually edit): Incorrect.

* Why: Subscriptions are tied to the group, not a static user list-manual edits aren't required for membership changes.

* Option D (Only members at creation time): Incorrect.

* Why: This would be true for individual subscriptions (static list), but group subscriptions are dynamic.

Why This Matters: Dynamic group subscriptions streamline content delivery as teams evolve, reducing admin overhead.

Reference: Tableau Server Documentation - "Manage Subscriptions" (<https://help.tableau.com/current/server/en-us/subscribe.htm>).

NEW QUESTION # 35

You need to verify the status of the Coordination Service ensemble in a high-availability (HA) Tableau Server cluster. What should you do?

- A. Run the command `tsm maintenance ziplogs`
- B. Examine the Tableau Server Status page
- C. Run the command `tsm status -v`
- D. Examine the Tableau Services Manager (TSM) web client Status page

Answer: C

Explanation:

In an HA Tableau Server cluster, the Coordination Service (ZooKeeper ensemble) maintains cluster state- let's find the best way to check it:

* Coordination Service:

* Runs on multiple nodes (3 or 5 in HA) to ensure quorum and failover.

* Status indicates if it's running and synced-critical for cluster health.

* Option C (Run `tsm status -v`): Correct.

* Details: `tsm status --verbose` lists all processes across nodes, including Coordination Service (e.g., "Coordination Service: RUNNING").

* Why Best: Provides detailed, node-specific status in the CLI-e.g., "Node 1: RUNNING, Node 2: RUNNING."

* Use: Run on the initial node; `-v` ensures full output.

* Option A (TSM web client Status page): Incorrect.

* Why: The TSM UI (Server > Status) shows process counts (e.g., "Coordination Service: 3 instances"), but not detailed per-node status-less granular than CLI.

* Option B (`tsm maintenance ziplogs`): Incorrect.

* Why: Generates log archives for troubleshooting, not a real-time status check.

* Option D (Tableau Server Status page): Incorrect.

* Why: The Server Status page (Server > Status in the web UI) monitors application processes (e.

g., VizQL), not TSM's Coordination Service.

Why This Matters: Coordination Service health ensures HA stability-tsm status -v is the admin's go-to for precision.

Reference: Tableau Server Documentation - "Check Server Status" (https://help.tableau.com/current/server/en-us/tsm_status.htm).

NEW QUESTION # 36

If a user already exists as part of a group in Tableau Server, and Active Directory synchronization then applies a minimum site role to the group, what will happen to the existing user's site role?

- A. It will never change as a result of synchronization
- B. It will always change to the minimum site role
- **C. It will change to the minimum site role only if the minimum site role reduces access**
- D. It will change to the minimum site role only if the minimum site role provides more access

Answer: C

Explanation:

When Tableau Server uses Active Directory (AD) for authentication, group synchronization imports AD groups and assigns a minimum site role (e.g., Viewer, Explorer) to users in that group. This ensures users meet a baseline access level. The behavior for existing users during sync is:

* If the user's current site role provides more access than the minimum (e.g., Explorer vs. Viewer), their role remains unchanged.

* If the user's current role provides less access than the minimum (e.g., Unlicensed vs. Viewer), their role is upgraded to the minimum.

This preserves higher privileges while enforcing a floor. "Reduces access" means the minimum role is lower than the current role (e.g., Viewer vs. Explorer), in which case the existing role stays.

* Option A (It will change to the minimum site role only if the minimum site role reduces access):

Correct. The user's role changes only if the minimum increases access (e.g., Unlicensed to Viewer); otherwise, it stays higher.

* Option B (It will change only if the minimum provides more access): Incorrect wording. This is the inverse of the actual behavior-change occurs when needed to meet the minimum, not to exceed it.

* Option C (It will always change): Incorrect. Existing higher roles are preserved.

* Option D (It will never change): Incorrect. It changes if the current role is below the minimum.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 37

What two types of users can sign in to Tableau Server and edit the permissions for a workbook in a project, when permissions are NOT set to Locked to the project? (Choose two.)

- A. Users that have the project and workbook Viewer role
- **B. Users set to Project Leader for the workbook's project**
- **C. The workbook's owner**
- D. Users that have the workbook Interactor role

Answer: B,C

Explanation:

Editing permissions on a workbook in Tableau Server depends on the user's role and the project's permission settings. Since permissions are not locked (i.e., "Managed by Owner"), let's dissect who can edit them:

* Permission Model:

* Not Locked: Owners of content (workbooks, data sources) can set permissions, and Project Leaders can override at the project level.

* Site Roles: Define maximum capabilities (e.g., Viewer, Explorer, Creator).

* Capabilities: "Set Permissions" is explicit-only certain users get it.

* Option C (The workbook's owner): Correct.

* Details: The owner (typically the publisher) has full control over their workbook when permissions are Managed by Owner:

* How: In the UI, go to Content > Workbooks > Actions > Permissions-owners can edit rules (e.g., grant Editor to a group).

* Site Role: Minimum of Explorer (can publish) or Creator to publish, ensuring "Set Permissions" capability.

* Why: Ownership inherently includes permission management unless locked.

* Option D (Users set to Project Leader for the workbook's project): Correct.

* Details: Project Leaders are assigned via Content > Projects > Actions > Permissions > Set Project Leader:

- * Power: Can edit permissions for all content in the project, even if not the owner.
- * Site Role: Requires Site Administrator or Server Administrator (Creator/Explorer variants suffice).
- * Why: Overrides ownership in Managed by Owner mode-ensures project-level governance.
- * Option A (Users with project and workbook Viewer role): Incorrect.
- * Why: Viewer role (site-level) limits users to viewing-lacks "Set Permissions" capability, regardless of project/workbook rules.
- * Option B (Users with workbook Interactor role): Incorrect.
- * Why: "Interactor" isn't a standard role-likely a misnomer for Explorer or Viewer with interaction permissions (e.g., Filter). No permission-editing rights exist here.

Why This Matters: Knowing who can edit permissions prevents access control gaps-crucial for collaborative or regulated environments.

Reference: Tableau Server Documentation - "Permissions" (<https://help.tableau.com/current/server/en-us/permissions.htm>), "Project Leader Permissions" (https://help.tableau.com/current/server/en-us/permissions_project_leader.htm).

NEW QUESTION # 38

.....

The test software used in our products is a perfect match for Windows' Analytics-Admn-201 learning material, which enables you to enjoy the best learning style on your computer. Our Analytics-Admn-201 certification guide also use the latest science and technology to meet the new requirements of authoritative research material network learning. Unlike the traditional way of learning, the great benefit of our Analytics-Admn-201 learning material is that users can flexibly adjust their learning plans. We hope that our new design of Analytics-Admn-201 test questions will make the user's learning more interesting and colorful.
