EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

Question:

What is a read miss in cache operations?

- A. Deleting data from the cache
- B. Fetching data that is not in cache
- C. Writing data to the cache

- D. Fetching requested data that is already in cache

Answer: B

Explanation:

A read miss occurs when the data requested by the host is not available in the cache. As a result, the storage system must fetch the data from the slower disk storage (back-end), leading to higher latency.

- * Cache hit: Data is already in cache # faster response.
- * Cache miss (read miss): Data not in cache # fetched from the disk.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Cache Operations and Intelligent Storage Systems.

NEW QUESTION # 23

Question:

A company is implementing a new information security policy. They want to ensure that the policy aligns with its risk appetite, internal policies, and external regulations. Which framework can help the company achieve this goal?

- A. COBIT
- B. ITIL
- C. GRC
- D. GDPR

Answer: C

Explanation:

GRC stands for Governance, Risk, and Compliance. It's a comprehensive framework that helps organizations align their IT operations with business objectives, manage risks effectively, and ensure compliance with internal and external regulations.

- * GDPR: A specific regulation focusing on data protection and privacy in the EU.
- * COBIT: A framework for IT governance and management, but not as comprehensive in risk and compliance aspects.
- * ITIL: Focuses on IT service management, not directly on governance or compliance.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Security and Management Frameworks.

NEW QUESTION # 24

Question:

An IT department needs to execute automated tasks to perform a business operation. They require workflows for arranging, coordinating, and managing these tasks. Which layer of the Modern Data Center Architecture provides this functionality?

- A. Physical infrastructure
- B. Virtual infrastructure
- C. Orchestration
- D. Services

Answer: C

Explanation:

The orchestration layer in a modern data center architecture is responsible for automating and coordinating complex tasks and workflows. It enables the integration and management of various services and resources to perform business operations efficiently.

- * Physical infrastructure: Comprises the hardware components.
- * Virtual infrastructure: Includes virtualized resources like VMs.
- * Services: Deliver specific functionalities to end-users.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Modern Data Center Architecture.

NEW QUESTION # 25

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Reducing data volume to manageable sizes

- B. Combining data from various sources and formats cost-effectively
- C. Storing transaction-based data over the years
- D. Generating real-time data

Answer: B

Explanation:

Big Data's 'variety' refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

* Generating real-time data is about velocity, not variety.

* Storing data over years is about volume.

* Reducing volume is more about data management, not variety.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Big Data Characteristics.

NEW QUESTION # 26

Question:

A company is concerned about the risk of data loss due to accidental deletion and hardware failures. What is the primary reason for implementing a data backup solution?

- A. To reduce the usage of archive storage
- B. To reduce storage costs
- C. To maintain business continuity
- D. To improve application performance

Answer: C

Explanation:

The primary purpose of a data backup solution is to maintain business continuity by ensuring data can be restored in case of accidental deletion, hardware failure, or data corruption.

* Not to reduce storage costs: Archiving and tiering handle that.

* Not to improve application performance: Backup processes typically don't enhance live performance.

* Not to reduce archive usage: Backup and archive have different use cases.
