Valid Plat-Dev-210 Test Materials - Latest Plat-Dev-210 Test Simulator

All these three Salesforce Plat-Dev-210 exam questions formats contain the real, valid, and error-free Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam practice test questions that are ideal study material for quick Salesforce Plat-Dev-210 Exam Preparation. Just choose the right Prep4SureReview Salesforce Certified Omnistudio Developer Questions formats and download quickly and start Salesforce Certified Omnistudio Developer (Plat-Dev-210) exam preparation without wasting further time.

Salesforce Certified Omnistudio Developer Sample Questions (Q13-Q18):

NEW QUESTION # 13
A developer examines data received from an external data source. The data is nested two levels down in the JSON structure. Which OmniStudio tool could the developer use to simplify this data?

- A. A guided workflow
- B. An HTTP Action Element
- C. A DataRaptor Transform

- D. An integration Procedure

Answer: C

Explanation:
A DataRaptor Transform can simplify nested data by transforming it into a flat structure. The developer can use JSON paths to map the input data to the output data and define the output structure.

NEW QUESTION # 14

A developer creates an Integration Procedure with a Set values and a DataRaptor Extract Action that requires Accountld as a key. When the developer previews the Integration Procedure, the developer enters the Accountld correctly and executes the preview. The developer sees the dataextracted by the DataRaptor in the Debug Log, but the response is empty.
What is the likely cause of this issue?

- A. A Response Action was not added to the Integration Procedure.
- B. The DataRaptor Action did not have the Add Response To Response JSON property set to true.
- C. The Accountld used for the preview is invalid.
- D. The Response cannot be previewed directly.

Answer: B

Explanation:
The Add Response To Response JSON property on the DataRaptor Action indicates that the output of the DataRaptor should be added to the response JSON of the Integration Procedure. If this property is not set to true, the response will be empty even if the DataRaptor extracts data successfully.

NEW QUESTION # 15

- A. ☐
- B. ☐

Answer: B

Explanation:
The correct answer is Option B, which shows a FlexCard with a header, a body, and a footer. The header contains the title and the icon of the FlexCard. The body contains a Data table element that displays the records from the parent FlexCard. The footer contains a navigation Action that invokes an OmniScript.
Option A is incorrect because it shows a FlexCard with only a header and a body, and no footer.

NEW QUESTION # 16

A developer needs to create a list of cases for an account in a single Datable in a FlexCard. Like the one shown below.
How can the developer configure the FlexCard to display the case records in this way?

- A. Enable the Repeat Records feature on the FlexCard Setup tab
- B. Disable the Repeat Record feature on the FlexCard setup tab
- C. Select the Repeatable Mode property on the data table elements
- D. Enable the record Looping feature on the data table elements

Answer: C

Explanation:
The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

NEW QUESTION # 17

Refer to the exhibit.

A developer creates an OmniScript display FirstName, LastName, and BirthDate of a contact using a Type Ahead Block. The DataRaptor used in the Type Ahead has been tested and fetches the correct data.

When previewing Omniscript, the developer enters a name in the Type Ahead and makes a selection of a contact from the list. However, the text fields FirstName. LastName, and BirthDate are not getting populated with the data.

What is the reason that the fields fail to display the fetched data?

- A. FirstName, LastName, and Birthdate are not placed inside the Type ahead Block.
- B. The Typeghead ley is not in the correct format
- C. Use Data JSON is not selected in the properties of the Type Ahead Block.
- D. Lookup Mode is not selected in the properties of the Type A Head Block.

Answer: A

Explanation:

The FirstName, LastName, and BirthDate fields should be placed inside the Type Ahead Block, so that they can receive the data from the selected record in the Type Ahead list. The Type Ahead Block has a Data JSON Path property that specifies the path to the data node that contains the record fields. For example, if the Data JSON Path is set to Contact, then the FirstName field should have a Value property set to {{Contact.
FirstName}}.

NEW QUESTION # 18

......

If you want to be a leader in some industry, you have to continuously expand your knowledge resource. Our Prep4SureReview always updates the exam dumps and the content of our exam software in order to ensure the Plat-Dev-210 exam software that you have are the latest and comprehensive version. No matter which process you are preparing for Plat-Dev-210 Exam, our exam software will be your best helper. As the collection and analysis of our Plat-Dev-210 exam materials are finished by our experienced and capable IT elite.
