Salesforce Certified OmniStudio Developer Sample Questions (Q25-Q30):

NEW QUESTION # 25
A developer needs to configure a DataRaptor to retrieve data from a singleobject. Thestructure of the output data does not need to be changed.
Following best practices, which type of DataRaptor should the developer use?

- A. DataRaptor Extract
- B. DataRaptor Transform
- C. DataRaptor Turbo Extract
- D. DataRaptor Load

Answer: C

Explanation:
Explanation
A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without changing the structure of the output data. It is suitable for this scenario because the developer does not need to transform or load the data

NEW QUESTION # 26
An OmniScript displays data from an API using Integration Procedure, but someof thedata is missing.
Which two configuration errors could cause this? Choose 2 answers

- A. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.
- B. The Integration Procedure Preview Input Parametersdo notmatch the JSON sent fromthe OmniScript.
- C. The JSOW sent fromthe Integration Procedure Action does not match any of the Original Input for the Integration Procedure
- D. The missing data is trimmed in the Integration Procedure Action Response JSON Path.

Answer: A,C

Explanation:
Explanation
The element name for the missing data must match the JSON node key in the Integration Procedure Response, otherwise the data will not be mapped correctly. The JSON sent fromthe Integration Procedure Action must match one of the Original Input for the Integration Procedure, otherwise the Integration Procedure will not execute properly. The Integration Procedure Preview Input Parameters and the Response JSON Path have no effect on displaying data in OmniScript.

NEW QUESTION # 27
Refer to the following row-versioned calculation matrix.
The developer needs to delete the row that contains the Code CA-SF.
If the developer deletes that row in Version 3, what is the result?

- A. The row is deleted in Version 3 and Version 1.
- B. The row is delete only in Version 3.
- C. The row is deleted in all versions
- D. The row is deleted In Versions 2 and 3 but will remain in Version 1.

Answer: B

NEW QUESTION # 28
An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the dat a. What error could cause this behavior?
Choose 2 answers

- A. The fields that are not updated are read only in Salesforce.

- B. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.
- C. The input JSON paths In the DataRaptor Load do not match the JSON from the OmniScript.
- D. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor

Answer: A,C

NEW QUESTION # 29
A developer creates a DataRaptor Extract to retrieve data to pass toan externalservice. The external service expects the field value to beaninteger. However, the DataRaptor is sending it as a string.
Which action can the developer take to fix this?

- A. In the DataRaptor Extract tab, set the Input Data Type field to Integer.
- B. In the DataRaptor Formula tab, define a formula using the function TOINTEGER and usethe formulaas output.
- C. In the DataRaptor Output tab, enter the default value as 0 on the field.
- D. In the DataRaptor Output tab, select the Output Data Type of that field toInteger.

Answer: B

Explanation:
Explanation
The DataRaptor Formula tab allows the developer to define formulas using functions and operators to manipulate data. The TOINTEGER function converts a string value to an integer value. The developer can use this function to output the field value as an integer and use the formula as output
