New AZ-120 Test Test, AZ-120 Exam Dump

New developments in the tech sector always bring new job opportunities. These new jobs have to be filled with the AZ-120 certification holders. So to fill the space, you need to pass the AZ-120 Exam. Earning the AZ-120 certification helps you clear the obstacles you face while working in the Microsoft field.

Earning the Microsoft AZ-120 certification can provide IT professionals with a significant boost in their career. Planning and Administering Microsoft Azure for SAP Workloads certification can help candidates demonstrate their expertise in managing SAP workloads on Azure, which is a highly sought-after skill in the industry. It can also open up various job opportunities, such as SAP Cloud Solution Architect, SAP Cloud Operations Engineer, and SAP Cloud Administrator, among others. Overall, the Microsoft AZ-120 Exam is an excellent opportunity for IT professionals to demonstrate their skills and advance their careers in the field of SAP and Azure administration.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q209-Q214):

NEW QUESTION # 209

You have an Azure subscription that contains an SAP HANA on Azure (Large Instances) deployment. The deployment is forecasted to require an additional 256 GB of storage. What is the minimum amount of additional storage you can allocate?

- A. 1 TB
- B. 2 TB
- C. 256 GB
- D. 512 GB

Answer: C

NEW QUESTION # 210

You have an SAP production landscape on Azure that contains the virtual machines shown in the following table.

You configure HANA system replication as shown in the following table.

You configure two load balancers as shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/sap-hana-high-availability>

NEW QUESTION # 211

You have an on-premises SAP landscape that contains a 20-TB IBM DB2 database. The database contains large tables that are optimized for read operations via secondary indexes.

You plan to migrate the database platform to SQL Server on Azure virtual machines.

You need to recommend a database migration approach that minimizes the time of the export stage.

What should you recommend?

- A. deleting secondary indexes
- B. log shipping
- C. table splitting
- D. SAP Database Migration Option (DMO) in parallel transfer mode

Answer: A

Explanation:

Secondary indexes for very large tables can be removed from the STR file and built ONLINE with scripts after the main portion of

the import has finished and post processing tasks such as configuring STMS are occurring.

NEW QUESTION # 212

You plan to implement a deployment of SAP NetWeaver on Azure. The deployment will be hosted on virtual machines that run a custom Windows Server 2022 Datacenter image.

You need to configure the virtual machines to support Secure Boot.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 213

You have an on-premises deployment of SAP Business Suite on HANA that includes a CPU-intensive application tier and a 20-TB database tier.

You plan to migrate to SAP HANA on Azure.

You need to recommend a compute option to host the application and database tiers. The solution must minimize cost.

What should you recommend for each tier? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Text Description automatically generated

Box 1: Ev3 series M Azure virtual machines

The Ev3 series pricing is starting from \$58.40 /per month.

The E-series Azure VMs are optimized for heavy in-memory applications such as SAP HANA. These VMs are configured with high memory-to-core ratios, which makes them well-suited for memory-intensive enterprise applications, large relational database servers, in-memory analytics workloads etc.

The Ev3-series VMs range from 2 to 64 vCPUs and 16-432 GiB of RAM, respectively.

Example workloads include SAP HANA (e.g., E64s v3, E20ds v4, E32ds v4, E48ds v4, E64ds v4), SAP S/4 HANA application layer, SAP NetWeaver application layer, and more broadly memory-intensive enterprise applications, large relational database servers, data warehousing workloads, business intelligence applications, in-memory analytics workloads, and additional business-critical applications, including systems that process financial transactions of various nature...

Note: The M-series family of Azure virtual machines are memory optimized and are ideal for heavy in-memory workloads such as SAP HANA. The M-Series offer up to 4 TB of RAM on a single VM. In addition, these VMs offer a virtual CPU count of up to 128 vCPUs on a single VM to enable high performance parallel processing.

Example workloads include SAP HANA, SAP S/4 HANA, SQL Hekaton and other large in-memory business critical workloads requiring massive parallel compute power.

Box 2: Hana on Azure (Large Instances)

The storage used in HANA Large Instances has a file size limitation. The size limitation is 16 TB per file.
