## Salesforce Certified Platform User Experience Designer Sample Questions (Q50-Q55):

### NEW QUESTION # 50

A UX Designer at Cloud Kicks has the requirements and some user scenarios but wants to test how a new feature will be received by the user.

What should the designer create and show to the user to test the content and structure of the new feature?

- A. Dairy Study
- B. Heuristic Review
- C. Task Analysis
- D. Wireframe Prototype

**Answer: D**

Explanation:

A wireframe prototype is a low-fidelity representation of the content and structure of a new feature, without any visual design or branding elements. It is used to test the usability and functionality of the feature with the user, and to gather feedback and iterate on the design. A wireframe prototype can be created using tools like Sketch, Figma, or Adobe XD, and can be interactive or static. Reference:

[Salesforce Certified User Experience Designer Exam Guide], Section 2.2: Design and test prototypes

[UX Designer Certification Prep: Prototyping], Unit 2: Wireframes and Prototypes

### NEW QUESTION # 51

A UX Designer wants to communicate the value of diversity, inclusion, and equality in design.

Which three business outcomes represent these values?

Choose 3 answers

- **A. Economic growth**
- B. Critical investing
- **C. Less employee turnover**
- **D. Greater market share**
- E. Fewer workplace debates

**Answer: A,C,D**

Explanation:

Diversity, inclusion, and equality in design are values that can lead to positive business outcomes, such as less employee turnover, greater market share, and economic growth. These values can help create a more inclusive and innovative workplace, where employees feel valued, respected, and engaged, and where customers feel understood, represented, and satisfied. Some of the benefits of these values are:

Less employee turnover: Diversity, inclusion, and equality in design can reduce employee turnover by fostering a culture of belonging, trust, and collaboration, where employees can thrive and grow. According to a Salesforce report<sup>1</sup>, employees who feel a sense of belonging at work are 5.3 times more likely to feel empowered to perform their best work, and employees who feel their voice is heard at work are 4.6 times more likely to feel empowered to perform their best work. Moreover, employees who feel valued and included are more likely to stay loyal to their employer, reducing the costs and risks of hiring and training new staff.

Greater market share: Diversity, inclusion, and equality in design can increase market share by expanding the customer base, enhancing the customer experience, and improving the brand reputation. According to a McKinsey report<sup>2</sup>, companies in the top quartile for ethnic and cultural diversity on executive teams were 36% more likely to experience above-average profitability than companies in the fourth quartile. Moreover, companies that design products and services that meet the needs and preferences of diverse customers can gain a competitive edge and increase customer loyalty and retention.

Economic growth: Diversity, inclusion, and equality in design can contribute to economic growth by boosting productivity, innovation, and social impact. According to a World Bank report<sup>3</sup>, increasing women's labor force participation and earnings could add \$172 trillion to global wealth. Moreover, companies that leverage the diverse perspectives and experiences of their employees can generate more creative and effective solutions, and companies that support social causes and environmental sustainability can create positive change and attract more customers and investors.

### NEW QUESTION # 52

Cloud Kicks (CK) wants to build a custom component for a complex opportunity process. CK's UX Designer is creating a three-step flow with modals and needs to select the main buttons for the "Continue", "Cancel", and "Back" actions.

Which set should be chosen to adhere to the Salesforce Design System guidelines for button usage?

- A. Brand button for "Continue", "Cancel", and "Back"
- B. Brand button for "Cancel" and "Continue"; Neutral button for "Back"
- **C. A Neutral button for "Cancel" and "Back"; Brand button for "Continue"**

**Answer: C**

Explanation:

According to the Salesforce Design System guidelines for button usage, the brand button should be used for the primary action on a page or modal, such as "Save" or "Continue". The neutral button should be used for secondary or tertiary actions, such as "Cancel" or "Back". The brand button should have more visual weight and contrast than the neutral button, to indicate its importance and guide the user's attention. Therefore, the best option for the Cloud Kicks custom component is to use a brand button for "Continue" and neutral buttons for "Cancel" and "Back". ### NEW QUESTION # 53

A UX Designer is considering the design of a record creation screen for the custom object Appointment.

Appointment records have to record types: Virtual and In-Person, Virtual appointments may have different virtual meeting software options, each with fields specific to it.

Which two considerations should be made when creating this record using Dynamic Forms?

Choose 2 answers

- A. The form will not be available on mobile devices.
- **B. The use of tabs when creating the record is not allowed.**
- **C. Fields can be organized into sections.**
- D. All software option sections of the form will always be visible.

**Answer: B,C**

Explanation:

Dynamic Forms is a feature that allows users to customize the form fields and sections displayed to users on a page layout. Dynamic Forms can be used to create user-centric, intuitive, and dynamic record creation screens for custom objects, such as

Appointment. When creating a record using Dynamic Forms, the UX designer should consider the following two aspects<sup>12</sup>:

The use of tabs when creating the record is not allowed. Dynamic Forms does not support the use of tabs within the form, as tabs are not compatible with the record creation process. Tabs are only available for viewing or editing existing records, not for creating new ones. Therefore, the UX designer cannot use tabs to separate the fields for different record types or software options on the record creation screen.

Fields can be organized into sections. Dynamic Forms allows the UX designer to group fields into sections, and place them anywhere on the page layout. Sections can have labels, collapsible headers, and visibility rules. The UX designer can use sections to create a logical and clear structure for the form, and to show or hide fields based on user input, data, or profile. For example, the UX designer can create a section for each software option, and use visibility rules to display only the relevant section based on the user's selection.

The following two aspects are not true when creating a record using Dynamic Forms, and should be disregarded:

The form will not be available on mobile devices. Dynamic Forms is compatible with mobile devices, and the UX designer can preview and test the form on different device sizes and orientations. The form will automatically adjust to the screen size and layout of the mobile device, and provide a responsive and consistent user experience<sup>3</sup>.

All software option sections of the form will always be visible. Dynamic Forms allows the UX designer to use visibility rules to control the visibility of fields and sections on the form. Visibility rules can be based on user input, data, or profile. The UX designer can use visibility rules to show or hide software option sections based on the user's selection of the record type or the software option. This can reduce the clutter and complexity of the form, and provide a personalized and flexible user experience<sup>4</sup>.
