

2026 SAP High-quality Test C-BW4H-2505 Testking

2026 Latest BraindumpsPrep C-BW4H-2505 PDF Dumps and C-BW4H-2505 Exam Engine Free Share:
<https://drive.google.com/open?id=1Yuv-neuzv9fdBw7RjxOgKsXOJ5iaDRbv>

The SAP C-BW4H-2505 desktop practice exam software is customizable and suits the learning needs of candidates. A free demo of the SAP Certified Associate - Data Engineer - SAP BW/4HANA (C-BW4H-2505) desktop software is available for sampling purposes. You can change SAP C-BW4H-2505 Practice Exam's conditions such as duration and the number of questions. This simulator creates a SAP Certified Associate - Data Engineer - SAP BW/4HANA (C-BW4H-2505) real exam environment that helps you to get familiar with the original test.

SAP C-BW4H-2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• SAP BW• 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW• 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.
Topic 2	<ul style="list-style-type: none">• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.

Topic 3	<ul style="list-style-type: none"> Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
Topic 4	<ul style="list-style-type: none"> SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW 4HANA. It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.
Topic 5	<ul style="list-style-type: none"> SAP BW 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW 4HANA. It focuses on designing scalable, high-performing data models.
Topic 6	<ul style="list-style-type: none"> Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.
Topic 7	<ul style="list-style-type: none"> Data Acquisition into SAP BW 4HANA: This section tests how Data Engineers manage data integration into SAP BW 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
Topic 8	<ul style="list-style-type: none"> Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.

C-BW4H-2505 Instant Download | Valid Test C-BW4H-2505 Vce Free

The one badge of C-BW4H-2505 certificate will increase your earnings and push you forward to achieve your career objectives. Are you ready to accept this challenge? Looking for the simple and easiest way to pass the C-BW4H-2505 certification exam? If your answer is yes then you do not need to get worried. Just visit the SAP C-BW4H-2505 Pdf Dumps and explore the top features of C-BW4H-2505 test questions. If you feel that SAP Certified Associate - Data Engineer - SAP BW/4HANA C-BW4H-2505 exam questions can be helpful in exam preparation then download SAP Certified Associate - Data Engineer - SAP BW/4HANA C-BW4H-2505 updated questions and start preparation right now.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q30-Q35):

NEW QUESTION # 30

In SAP Web IDE for SAP HANA you have imported a project including an HDB module with calculation views. What do you need to do in the project settings before you can successfully build the HDB module?

- A. Generate the HDI container.
- B. Define a package.
- C. Change the schema name
- D. Assign a space.

Answer: A

Explanation:

In SAP Web IDE for SAP HANA, when working with an HDB module that includes calculation views, certain configurations must be completed in the project settings to ensure a successful build. Below is an explanation of the correct answer and why the other options are incorrect.

B). Generate the HDI containerTheHDI (HANA Deployment Infrastructure)container is a critical component for deploying and managing database artifacts (e.g., tables, views, procedures) in SAP HANA. It acts as an isolated environment where the database objects are deployed and executed. Before building an HDB module, you must generate the HDI container to ensure that the necessary runtime environment is available for deploying the calculation views and other database artifacts.

* Steps to Generate the HDI Container:

* In SAP Web IDE for SAP HANA, navigate to the project settings.

* Under the "SAP HANA Database Module" section, configure the HDI container by specifying the required details (e.g., container name, schema).

* Save the settings and deploy the container.

* The SAP HANA Developer Guide explicitly states that generating the HDI container is a prerequisite for building and deploying HDB modules. This process ensures that the artifacts are correctly deployed to the SAP HANA database.

Incorrect OptionsA. Define a packageDefining a package is not a requirement for building an HDB module.

Packages are typically used in SAP BW/4HANA or ABAP environments to organize development objects, but they are not relevant in the context of SAP Web IDE for SAP HANA or HDB modules.

Reference: The SAP Web IDE for SAP HANA documentation does not mention packages as part of the project settings for HDB modules.

C). Assign a spaceAssigning a space is related to Cloud Foundry environments, where spaces are used to organize applications and services within an organization. While spaces are important for deploying applications in SAP Business Technology Platform (BTP), they are not directly related to building HDB modules in SAP Web IDE for SAP HANA.

Reference: The SAP BTP documentation discusses spaces in the context of application deployment, but this concept is not applicable to HDB module builds.

D). Change the schema nameChanging the schema name is not a mandatory step before building an HDB module. The schema name is typically defined during the configuration of the HDI container or inherited from the default settings. Unless there is a specific requirement to use a custom schema, changing the schema name is unnecessary.

Reference: The SAP HANA Developer Guide confirms that schema management is handled automatically by the HDI container unless explicitly customized.

ConclusionThe correct action required before successfully building an HDB module in SAP Web IDE for SAP HANA is:Generate the HDI container.

This step ensures that the necessary runtime environment is available for deploying and executing the calculation views and other database artifacts. By following this process, developers can seamlessly integrate their HDB modules with the SAP HANA database and leverage its advanced capabilities for data modeling and analytics.

NEW QUESTION # 31

What are the possible ways to fill a pre-calculated value set (bucket)? Note: There are 3 correct answers to this question.

- A. By accessing an SAP HANA HDI Calculation View of data category Dimension
- B. By using a BW query (update value set by query)
- C. By entering the values manually
- D. By referencing a table
- E. By using a transformation data transfer process (DTP)

Answer: B,C,D

NEW QUESTION # 32

You created a generic DataSource in SAP ERP, but did not release the DataSource for Operational Data Provisioning (ODP). What is the effect in SAP BW/4HANA?

- A. The ODP DataSource has to be created using the ODP_SAP source system type.
- B. The ODP DataSource has to be created using the ODP_HANA source system type.
- C. The ODP DataSource cannot be replicated using the ODP_SAP source system type.
- D. The ODP DataSource can be generated using the DataFlow generation feature.

Answer: C

NEW QUESTION # 33

You create an SAP HANA HDI Calculation View. What are some of the reasons to choose the data category Cube with Star Join instead of data category Dimension? Note: There are 3 correct answers to this question.

- A. You can create restricted columns.
- B. You can provide default time characteristics.
- C. You can persist transactional data.
- D. You can combine master data transactional data.
- E. You can aggregate measures as a sum.

Answer: C,D,E

NEW QUESTION # 34

Which entity can be used as a source of an Analytic Model?

- A. Business entities of semantic type Dimension
- B. Remote tables of semantic type Text
- C. Views of semantic type Fact
- D. Tables of semantic type Hierarchy

Answer: C

Explanation:

An Analytic Model in SAP Data Fabric or SAP BW/4HANA is designed to analyze data by combining facts (measures) and dimensions (attributes). To create an Analytic Model, you need a source entity that represents the fact data. Below is a detailed explanation of why the correct answer is B:

* Incorrect: Business entities of semantic type Dimension represent descriptive attributes (e.g., customer name, product category) rather than measurable data. While dimensions are essential for enriching fact data, they cannot serve as the primary source of an Analytic Model.

Option A: Business entities of semantic type Dimension

* Correct: Views of semantic type Fact contain measurable data (e.g., sales revenue, quantity sold) and are the primary source for an Analytic Model. These views provide the numerical data required for analysis and reporting.

Option B: Views of semantic type Fact

* Incorrect: Tables of semantic type Hierarchy define hierarchical relationships (e.g., organizational structures or product hierarchies). While hierarchies are useful for organizing and navigating data, they do not contain measurable data and cannot serve as the source of an Analytic Model.

Option C: Tables of semantic type Hierarchy

* Incorrect: Remote tables of semantic type Text store textual descriptions (e.g., product names, region names). These tables are used to enhance dimensions but do not contain measurable data and are not suitable as the source of an Analytic Model.

Option D: Remote tables of semantic type Text

* SAP Data Fabric Documentation: Explains the role of semantic types in defining the purpose of entities (e.g., Fact, Dimension, Hierarchy, Text).

* SAP BW/4HANA Modeling Guide: Describes how Analytic Models are built using fact data as the primary source and dimensions for contextual enrichment.

* SAP Analytics Cloud Integration: Highlights the importance of fact views in enabling advanced analytics and reporting.

References to SAP Data Engineer - Data Fabric Concepts By understanding the semantic types and their roles, you can effectively design Analytic Models that meet business requirements for data analysis and reporting.

NEW QUESTION # 35

.....

On a regular basis, we update the PDF version to improve the C-BW4H-2505 Questions and accurately reflect any changes that have been made to the test content. We know that SAP Certified Associate - Data Engineer - SAP BW/4HANA (C-BW4H-2505) certification exam costs can be high, with registration fees often running between \$100 and \$1000. We provide a free demo version of our product to ensure you are completely satisfied with our SAP Certification Exams preparation material. The purpose of this free demo is to help you make a well-informed decision.
