To be out of the ordinary and seek an ideal life, we must master an extra skill to get high scores and win the match in the workplace. Our AB-900 exam question can help make your dream come true. What's more, you can have a visit of our website that provides you more detailed information about the AB-900 Guide Torrent. Just have a try our AB-900 exam questions, then you will know that you will be able to pass the AB-900 exam.

Microsoft 365 Copilot & Agent Administration Fundamentals Sample Questions (Q11-Q16):

NEW QUESTION # 11

Your company is piloting the use of Microsoft 365 Copilot and has purchased 100 Microsoft 365 Copilot licenses. You need to view detailed reports about Copilot usage in Microsoft Teams, such as meeting hours summarized by Copilot and meeting actions taken by using Copilot.

What should you use?

- A. the Microsoft 365 Copilot usage report in the Microsoft 365 admin center
- B. the Microsoft 365 Apps usage report in the Microsoft 365 admin center
- **C. the Microsoft 365 Copilot dashboard in Microsoft Viva Insights**
- D. the Microsoft 365 Copilot readiness report in the Microsoft 365 admin center

Answer: C

Explanation:

Organizations with hundreds of Microsoft 365 Copilot licenses can use the Microsoft Copilot Dashboard in Microsoft Viva Insights to track adoption and impact. This dashboard provides detailed, aggregated metrics on Copilot usage in Microsoft Teams, including total active users, meeting hours summarized, and actions taken (such as prompts) across meetings, chat, and email.

NEW QUESTION # 12

Your organization has a Microsoft 365 subscription that contains a user named User1. User1 plans to leave your company in two weeks. You need to capture the activity of User1 to identify whether the user is exfiltrating data. Which Microsoft Purview solution should you use?

- **A. Insider Risk Management**
- B. Communication Compliance
- C. Data Security Posture Management
- D. Data Lifecycle Management

Answer: A

Explanation:

The correct answer is C. Insider Risk Management . Microsoft documents that Microsoft Purview Insider Risk Management helps organizations detect, investigate, and act on potentially risky internal activities, including data theft and data leakage . Microsoft specifically provides policy templates for departing users

, describing scenarios where users who are leaving an organization might download files, print files, or copy data to personal cloud storage or messaging services near their resignation or end date. That matches this question exactly, where User1 is leaving in two weeks and you need to determine whether the user is exfiltrating data.

The other options do not fit. Communication Compliance is for reviewing risky communications, Data Security Posture Management focuses on broader data exposure posture, and Data Lifecycle Management is for retention and deletion. None of those is the Microsoft Purview solution specifically built to monitor suspicious user activity and data exfiltration risk for departing employees. Microsoft positions Insider Risk Management as the correct tool for this scenario.

NEW QUESTION # 13

Select the answer that correctly completes the sentence.

Answer:

Explanation:

□ Explanation:

□ The correct answer is adding a public DNS record . Microsoft documents that when you add a custom domain to Microsoft 365, you must first prove ownership of that domain before Microsoft 365 can use it for services such as Exchange Online, SharePoint, and user sign-ins. The standard verification method described by Microsoft is to add a DNS record at your domain registrar or DNS hosting provider. Microsoft commonly uses a TXT record for verification, although in some cases an MX record can also be used depending on the setup flow. This is why "adding a public DNS record" is the right completion for the sentence.

The other choices are not the standard Microsoft 365 domain verification process. Microsoft's admin guidance does not use confirming your business address , uploading a certificate , or uploading a webpage as the normal method for proving ownership of a domain in Microsoft 365. Domain verification is specifically tied to DNS because DNS is the authoritative public system used to prove control over the domain name.

NEW QUESTION # 14

Your organization has a Microsoft 365 subscription that contains a Microsoft SharePoint site named Site1.

The permissions for Site1 are configured as shown in the exhibit.

You create a new user named User1 in the subscription.

Use the drop-down menus to select the answer choice that completes the statement based on the information presented in the graphic.

User1 is a site member of Site1.

Answer:

Explanation:

Explanation:

a site member of

The correct answer is a site member of . In the exhibit, the Site members group for Site1 contains Everyone except external users with Edit permissions. Microsoft documents that "Everyone except external users" automatically includes all internal users and excludes external guests . Since User1 is a newly created user in the organization, User1 is an internal user and is therefore included in that built-in principal.

Because that built-in principal is placed in the Site members group, User1 inherits member-level access to the site. User1 is not a site owner, because the Site owners group contains only the Global Administrator entry shown in the exhibit. User1 is also not merely a visitor, because the Site visitors group is listed as None

. Finally, User1 is not prevented from accessing the site, because the membership granted through Everyone except external users gives internal users access to the site according to the permissions assigned to that group.

NEW QUESTION # 15

Which statement accurately describes authorization in Microsoft 365?

- A. a process to verify whether an identity is allowed to access a resource
- B. a process to verify whether an identity is who or what they claim to be
- C. a process to require additional authentication methods before an identity can access resources
- D. a process to validate an identity from an external system

Answer: A

Explanation:

The correct answer is C because Microsoft explains that authorization is the process of determining whether an authenticated identity is allowed to access a resource . Microsoft Learn distinguishes authorization from authentication by stating that authentication proves who you are, while authorization decides what you can access or do after identity has been established. In Microsoft 365 and the Microsoft identity platform, authorization commonly involves permissions, scopes, roles, and consent that control access to data and services such as Microsoft Graph, Exchange, SharePoint, or Teams.

Option A is incorrect because it refers more to external identity validation or federation concepts, not authorization itself. Option B describes authentication , not authorization, since it is about verifying identity claims. Option D describes a control such as multifactor authentication or Conditional Access requirements, which can happen before access is granted, but that still is not the definition of authorization. Authorization begins after identity verification and focuses on whether the identity has the right permissions for the requested resource.

NEW QUESTION # 16

.....

All of our considerate designs have a strong practicability. We are still researching on adding more useful buttons on our AB-900 test answers. The aim of our design is to improve your learning and all of the functions of our products are completely real. Then the learning plan of the AB-900 Exam Torrent can be arranged reasonably. You need to pay great attention to the questions that you make lots of mistakes. If you are interested in our products, click to purchase and all of the functions. Try to believe us and give our AB-900 exam guides a chance to certify.
