

# New FlashArray-Implementation-Specialist Exam Name & FlashArray-Implementation-Specialist Valid Exam Cram

## PURE CERTIFIED FLASHARRAY IMPLEMENTATION SPECIALIST EXAM SCRIPT 2026

● During an upgrade, you installed the new controller which has newer version than the version running on array. What do you do?

- A. Upgrade/downgrade version on new controller to match running version
- B. Upgrade array to new version
- C. Abort upgrade and call support. Answer: A. Upgrade/downgrade version on new controller to match running version

● Customer wants a newer version than what shipped. What do you do?

- A. Install with current version, have Pure Support upgrade version to desired
- B. Download the PPKG and SHA1 to USB and install
- C. Call Pure Support. Answer: B. Download PPKG and SHA1 to USB and install

● IWB has IP with mask 255.255.255.233 and default gateway 10.48.24.1. How should you fix?

- A. Set mask to /23
- B. Set mask to 255.255.255.0

P.S. Free 2026 Pure Storage FlashArray-Implementation-Specialist dumps are available on Google Drive shared by ValidDumps: [https://drive.google.com/open?id=1NnvrU2dp1cjAo00kx-CWC0l8l\\_4Z3Dnj](https://drive.google.com/open?id=1NnvrU2dp1cjAo00kx-CWC0l8l_4Z3Dnj)

Nowadays the competition in the society is fiercer and if you don't have a specialty you can't occupy an advantageous position in the competition and may be weeded out. Passing the Pure Storage Certified FlashArray Implementation Specialist test certification can help you be competent in some area and gain the competition advantages in the labor market. If you buy our FlashArray-Implementation-Specialist Study Materials you will pass the test smoothly. With a high pass rate as 98% to 100%, you will know that our FlashArray-Implementation-Specialist practice engine can provide you with the best pass percentage.

## Pure Storage FlashArray-Implementation-Specialist Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Pre-Installation</li> <li>• Upgrade: This section of the exam measures the skills of Enterprise Infrastructure Technicians and covers all preparation activities before deploying or upgrading a Pure Storage FlashArray. It includes understanding environmental requirements, verifying prerequisites, checking compatibility, and validating system readiness through appropriate tools and documentation.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• Post-Installation</li> <li>• Upgrade: This section of the exam measures the skills of FlashArray Implementation Specialists and evaluates how professionals confirm system functionality after installation or an upgrade. It involves validating connectivity, running health checks, confirming configurations, and ensuring that the deployment meets operational expectations.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Upgrades: This section of the exam measures the skills of FlashArray Implementation Specialists and focuses on tasks involved in managing firmware and software upgrades. Candidates must demonstrate knowledge of upgrade planning, verification steps, and rollback procedures, ensuring that systems are updated with minimal disruption to service.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Installation: This section of the exam measures the skills of Enterprise Infrastructure Technicians and focuses on executing a successful installation of FlashArray systems. It tests the ability to perform physical setup, cabling, configuration of network settings, and the application of initial system configurations necessary for full deployment.</li> </ul>

## FlashArray-Implementation-Specialist Valid Exam Cram, FlashArray-Implementation-Specialist New Practice Questions

Considering all customers' sincere requirements, FlashArray-Implementation-Specialist test question persist in the principle of "Quality First and Clients Supreme" all along and promise to our candidates with plenty of high-quality products. Numerous advantages of FlashArray-Implementation-Specialist training materials are well-recognized, such as 99% pass rate in the exam, free trial before purchasing. From the customers' point of view, our FlashArray-Implementation-Specialist Test Question put all candidates' demands as the top priority. We treasure every customer' reliance and feedback to the optimal FlashArray-Implementation-Specialist practice test.

## Pure Storage Certified FlashArray Implementation Specialist Sample Questions (Q181-Q186):

### NEW QUESTION # 181

Which Pure1 app functionality requires that a user is on their internal company network?

- A. View array telemetry
- B. Open Remote Assist
- C. Manage support cases

**Answer: B**

Explanation:

The Pure1 mobile app provides convenient access to array monitoring and management features from anywhere. Most features, such as viewing performance telemetry (Option A) or managing support tickets (Option B), are cloud-native and accessible over the public internet via the secure Pure1 connection.

However, Opening Remote Assist (RA) -the feature that creates a secure tunnel for Pure Storage Support to access the array remotely- is a privileged security action. To prevent unauthorized external actors from enabling this access, the Pure1 app often enforces a "proximity" or network validation check. The user must be connected to the internal company network (e.g., via Wi-Fi or VPN) that has visibility to the array's management interface to authorize the Remote Assist session. This requirement ensures that only an authorized administrator physically or logically present within the customer's secure environment can grant external access to the storage system.

### NEW QUESTION # 182

Before proceeding with a controller upgrade, phonehome logs must be sent. What command will verify that the logs have been sent?

- A. purearray phonehome --status
- B. purearray phonehome --list
- C. purearray phonehome --check

**Answer: B**

Explanation:

To verify the history and transmission status of Phonehome log bundles, the correct command is purearray phonehome --list . Before starting a controller upgrade (NDU), it is mandatory to ensure that the array can successfully transmit diagnostic data to Pure Storage. This allows Support to review the "pre-flight" checks and ensures that if an issue occurs during the upgrade, logs will be available for triage.

\* Usage: Running purearray phonehome --list displays a table of recent log bundles generated by the system.

\* Verification: The Engineer must look at the Status column for the most recent entries. A status of

"uploaded" confirms that the array has successfully connected to the Pure Storage cloud and transferred the data. If the status is "queued" or "failed," the upgrade should not proceed until network connectivity (firewall/proxy) is resolved. Options A and C are incorrect CLI syntax for this specific verification task.

### NEW QUESTION # 183

An Implementation Engineer is performing a capacity consolidation on an X50R3.

Which command is needed for the engineer to determine whether the customer's FlashArray supports SAS Flash Modules?

- A. puredrive list --total --type controller
- B. purehw list --type controller --all
- C. purehw list --type drive --all

**Answer: C**

Explanation:

To determine whether a specific FlashArray configuration, such as the FlashArray//X50R3, supports or is currently equipped to handle SAS Flash Modules, the command purehw list --type drive --all is the correct diagnostic tool. While the FlashArray//X series is architected as a 100% NVMe platform using DirectFlash Modules (DFMs) in the base chassis, it retains the capability to support legacy SAS Flash Modules (SSDs) through the attachment of external SAS expansion shelves.

The purehw list --type drive --all command provides a comprehensive enumeration of the physical drive hardware components recognized by the system. Unlike the puredrive list command, which focuses on the logical status, capacity, and admission state of the drives, the purehw command with the --type drive flag exposes the hardware-level details, including the interface protocol (SAS vs. NVMe) and the physical location of the drive bays.

By running this command, an Implementation Engineer can verify if the array is communicating with any SAS-based drive hardware. If SAS modules or SAS-compatible drive bays in an external shelf are listed, support is confirmed. Conversely, option A is syntactically incorrect for this purpose, and option B (purehw list --type controller) focuses on the compute node specifications rather than the storage media interfaces. Therefore, listing the drive hardware components is the definitive method to validate the presence and support of SAS Flash media within the specific array configuration during a capacity consolidation.

### NEW QUESTION # 184

Which Purity command can be used to validate I/O is balanced across initiators?

- A. purehost list --balance
- B. purehost monitor --balance
- C. purehost iobalance check

**Answer: B**

Explanation:

Validating multipath I/O balance is a critical post-configuration step. The FlashArray CLI provides a specific monitoring tool for this purpose under the purehost command suite.

purehost monitor --balance is the correct command.

monitor: This keyword initiates a real-time display of performance metrics (IOPS, bandwidth, latency).

--balance: This flag breaks down the metrics per initiator (per HBA/path) for the specified host(s).

The output allows the engineer to see if I/O is flowing evenly across all paths. If one path shows 0 IOPS while others are active, it indicates a zoning, cabling, or multipathing configuration issue that must be resolved to ensure high availability.

### NEW QUESTION # 185

During a hardware NDU from FlashArray//XR2 or XR3 to an XR4 model, which default service on-board ports are NO longer present in the XR4 controller design?

- A. iSCSI
- B. Replication
- C. Management

**Answer: A**

Explanation:

In the architectural evolution from FlashArray//XR2 and //XR3 to the FlashArray//XR4, Pure Storage made significant changes to the controller's rear panel and I/O design to accommodate higher performance and PCIe Gen 4 capabilities. One of the most critical changes for an Implementation Engineer to plan for during a hardware Non-Disruptive Upgrade (NDU) is the removal of the onboard, default iSCSI ports that were present on previous generations.

On //XR2 and //XR3 controllers, there were onboard Ethernet ports often used for iSCSI host connectivity without requiring a discrete PCIe adapter. However, the //XR4 controller design removes these dedicated onboard iSCSI ports to streamline the motherboard design and shift host I/O strictly to PCIe add-in cards. The

//XR4 retains onboard ports specifically for Management (Mgmt) and Replication connectivity, ensuring that administrative access and array-to-array replication can still be maintained without additional hardware.

Consequently, if a customer was relying solely on the onboard ports for iSCSI traffic on their legacy //XR2 or //XR3, the Bill of Materials (BOM) for the upgrade to //XR4 must include discrete Ethernet/iSCSI PCIe cards to migrate those connections. Failure to identify this architectural difference during the pre-upgrade inventory can result in a loss of host connectivity or an inability to cable the new controllers correctly, as the expected physical ports simply will not exist on the new chassis.

---

### NEW QUESTION # 186

.....

Pure Storage FlashArray-Implementation-Specialist certification exam is very important to every IT people. Getting the certification, you will not be eliminated in our career. What's more, you will get promoted and get more money. ValidDumps Pure Storage FlashArray-Implementation-Specialist dumps are the source of your success. Choosing it, you must arrive at the successful other shore. The reason is simply that ValidDumps Pure Storage FlashArray-Implementation-Specialist Answers Real Questions. FlashArray-Implementation-Specialist questions are all the latest and the price is the best. ValidDumps Pure Storage FlashArray-Implementation-Specialist certification training suits every IT certification candidates.
