NEW QUESTION # 69

Which statement about CreateAttribute() is true?

- A. It can only create schema attributes
- B. It always overwrites existing attributes
- C. It requires a type defined in Sdf.ValueTypeNames
- D. It automatically sets fallback values

Answer: C

Explanation:

Custom attributes must specify a type from Sdf.ValueTypeNames.

NEW QUESTION # 70

Which camera attribute controls zoom level?

- A. aperture
- B. orientation
- C. focalLength
- D. visibility

Answer: C

Explanation:

focalLength controls zoom.

NEW QUESTION # 71

What happens if a layer stack becomes too procedurally deep over time?

- A. It increases the cost of resolving and opening layers
- B. Nothing changes
- C. It reduces file size
- D. It improves performance

Answer: A

Explanation:

Deep or procedural layer stacks create overhead during composition, making load and resolve times slower.

NEW QUESTION # 72

What is the correct prim type in UsdShade for sharing reusable portions of shading networks, allowing for parameterization?

- A. SubNetwork
- B. Custom Schema
- C. NodeGraph

Answer: C

Explanation:

The correct UsdShade prim type is NodeGraph. NVIDIA's Learn OpenUSD material introduces UsdShade as the schema family used for creating and binding materials, where materials store render-facing shading definitions. The OpenUSD UsdShade specification defines UsdShadeNodeGraph as the mechanism for packaging shading networks into reusable units. A node graph can contain shader nodes and nested node graphs, expose public inputs as an interface, provide outputs, and be referenced into larger networks as a reusable building block.

Option C is correct because NodeGraph is explicitly designed for reusable and parameterized shading- network structure. It allows a pipeline to encapsulate repeated shading logic while exposing only selected parameters to consuming materials or larger graphs. Option A is incorrect because SubNetwork is not the correct UsdShade prim type in OpenUSD. Option B is incorrect because a custom schema could theoretically define new data models, but it is not the standard UsdShade construct for reusable shader-network packaging.

This aligns with Visualization # UsdShade, Materials, Shading Networks, NodeGraph Interfaces, Parameterization, and Reusable Material Components .

NEW QUESTION # 73

What is the primary goal of the Transform phase?

- A. Validate with usdchecker
- B. Parse source formats
- C. Adapt structure/behavior to target workflows
- D. Convert binary USD to ASCII
