As we all know, respect and power is gained through knowledge or skill. The society will never welcome lazy people. Do not satisfy what you have owned. Challenge some fresh and meaningful things, and when you complete SCP-NPM exam, you will find you have reached a broader place where you have never reach. There must be one that suits you best. Your life will become more meaningful because of your new change, and our SCP-NPM question torrents will be your first step.

The SCP-NPM Exam is a vendor-neutral certification that validates the knowledge and skills of IT professionals in network performance monitoring. SCP-NPM exam tests candidates' abilities to configure and manage SolarWinds NPM, including how to monitor network devices, set up alerts and notifications, and generate reports. SolarWinds Network Performance Monitor (NPM) Exam certification provides IT professionals with a competitive advantage in the job market and demonstrates their expertise in network performance monitoring.

SCP-NPM Latest Exam Vce, SCP-NPM Practice Exams

If you are looking for the latest exam materials for the test SCP-NPM and want to take part in the exam within next three months, it is time for you to get a good SCP-NPM guide torrent file. TestPassKing releases a good exam guide torrent recent days so that it will be available & useful for your exam. If you study hard with our SCP-NPM Guide Torrent file you will be able to pass exam certainly. Dozens of money spending on SCP-NPM guide torrent will help you save a lot of time and energy. Maybe you can avoid failure and pay extra exam cost.

SolarWinds SCP-NPM Certification is intended for network administrators, network engineers, and IT professionals who are responsible for network performance monitoring. SolarWinds Network Performance Monitor (NPM) Exam certification is an indication that the certified individual has the knowledge and skills to manage and troubleshoot networks using SolarWinds NPM. SolarWinds Network Performance Monitor (NPM) Exam certification also validates that the certified individual can effectively use NPM to monitor network performance, identify issues, and take corrective actions.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which metrics can NPM monitor on an Ethernet switch? (Choose all that apply.)

- A. Duplex mismatches
- B. CPU utilization

- C. Buffer misses
- D. Configuration changes

Answer: A,C,D

NEW QUESTION # 11

How can you quickly generate a report in NPM to show the top 50 interfaces by percent utilization?

- A. Copy a similar default report and edit it for different time-frames
- B. Copy a similar default report and edit it for the top 50 interfaces
- C. Create a web-based report and filter the data to restrict to the top 50 interfaces
- D. Create an advanced SQL query report

Answer: B

Explanation:

NPM provides several default reports that can be used as templates for creating custom reports. One of them is the Top 100 Interfaces by Percent Utilization report, which shows the average and peak utilization of the most used interfaces in the network. To create a report that shows only the top 50 interfaces, you can copy this report and edit it to change the number of rows displayed. You can also modify other parameters such as the time period, the grouping, the sorting, and the filtering criteria. To copy and edit a default report, follow these steps1:

Click Reports > All Reports > Manage Reports.

Find the Top 100 Interfaces by Percent Utilization report and click Duplicate & Edit.

On the Layout Builder panel, click Edit Table.

On the Edit Resource panel, change the Maximum Number of Rows to 50.

Optionally, change other settings such as the Time Period, the Group By, the Sort By, and the Filter Results.

Click Submit.

Optionally, change the Report Name, the Report Description, and the Report Category.

Click Next and then Save.

You can now run or schedule the report to show the top 50 interfaces by percent utilization. Reference: 1: Create a custom report for NPM showing availability of devices in the last 30 days

NEW QUESTION # 12

When you configure a report, you can limit access to specific users.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

When you configure a report in the SolarWinds Platform Web Console, you can limit access to specific users by assigning a report limitation category to the report and to the user account. A report limitation category is a custom label that defines which reports a user can see. For example, you can create a "finance" category and assign it to the reports and users related to the finance department. Users with the "finance" category can only access the reports with the same category, and not the reports with other categories, such as "marketing" or

"IT". You can also prevent users from accessing any reports by applying the "No Reports" limitation to their account, or allow administrators to see all reports by applying the "No Limitation" category to their account. References: Restrict who can access reports in the SolarWinds Platform, Define what users can access and do in the SolarWinds Platform

NEW QUESTION # 13

You start a new job where NPM is already in use. As soon as you are added to the alert list, you begin receiving "high traffic utilization" alerts from a handful of interfaces.

When you check the alert, the traffic spike has ended. Your new colleagues advise you to ignore these alerts because the spikes rarely last for more than a couple of minutes and are only a concern if they last longer.

How should NPM be modified so you receive fewer false alerts?

- A. Configure the alert so that it resets only when traffic utilization remains high for a sustained period

- B. Configure the alert so that it triggers only when traffic utilization remains high for a sustained period
- C. Increase the statistics polling frequency on the problematic interfaces
- D. Increase the status polling frequency on the problematic interfaces

Answer: B

Explanation:

The best way to reduce false alerts for high traffic utilization is to configure the alert trigger condition to be more specific and accurate. By setting the alert to trigger only when traffic utilization remains high for a sustained period, you can avoid getting alerted for short-lived spikes that are not a cause for concern. You can use the Time of Day and Trigger Condition options in the alert configuration wizard to define the duration and threshold of the high traffic utilization condition. For example, you can set the alert to trigger only when traffic utilization is greater than 80% for more than 10 minutes during business hours. Reference:

NEW QUESTION # 14

How can you add entities from NPM to monitor for all registered devices in your company domain?

- A. Add each of your Domain Controllers as nodes to NPM and scan Active Directory Organization Units (OUs) for the registered devices
- B. Add each registered device individually, and then select the entities you want to monitor
- C. Use the NPM Active Directory Discovery tool to find all registered devices on the domain
- D. Select to query Domain Controllers in a Network Discovery and then select the Organizational Units (OUs) with the registered devices you want to scan

Answer: D

Explanation:

Network Discovery is a feature of SolarWinds NPM that allows you to automatically discover and add network devices to the Orion Platform for monitoring. You can use Network Discovery to query Domain Controllers in your company domain and then select the Organizational Units (OUs) with the registered devices you want to scan. This way, you can add entities from NPM to monitor for all registered devices in your company domain in a single discovery. The other options are not as efficient or accurate as Network Discovery, as they either require manual addition of each device, or rely on the Domain Controllers to provide the list of registered devices, which may not be up-to-date or complete. References:

Discover your network devices and add them to the Orion Platform

Discover devices on your network using Active Directory
