VCE Google-Workspace-Administrator Dumps, Preparation Google-Workspace-Administrator Store

ExamBoosts is not only a website but as a professional study tool for candidates. Last but not least, we have advanced operation system of Google-Workspace-Administrator training materials which not only can ensure our customers the fastest delivery speed but also can protect the personal information of our customers automatically. In addition, our professional after sale stuffs will provide considerate online after sale service on the Google-Workspace-Administrator Exam Questions 24/7 for all of our customers. And our pass rate of Google-Workspace-Administrator studying guide is as high as 99% to 100%. You will get your certification with our Google-Workspace-Administrator practice prep.

To pass the exam, candidates must demonstrate their ability to configure and manage Google Workspace services, set up security and compliance policies, troubleshoot issues, and manage mobile devices. They must also possess a thorough understanding of Google Workspace architecture, integration options, and migration strategies. Google-Workspace-Administrator Exam consists of multiple-choice and scenario-based questions and can be taken online or at a testing center.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q99-Q104):

NEW QUESTION # 99

Your organization has implemented Single Sign-On (SSO) for the multiple cloud-based services it utilizes. During authentication, one service indicates that access to the SSO provider cannot be accessed due to invalid information.

What should you do?

- A. Verify the NameID Element in the SAML Response matches the Assertion Consumer Service (ACS) URL.
- **B. Verify the Audience Element in the SAML Response matches the Assertion Consumer Service (ACS) URL.**
- C. Verify the Subject attribute in the SAML Response matches the Assertion Consumer Service (ACS) URL.
- D. Verify the Recipient attribute in the SAML Response matches the Assertion Consumer Service (ACS) URL.

Answer: B

Explanation:

Reference: <https://auth0.com/docs/protocols/saml/saml-configuration/troubleshoot/auth0-as-sp>

<https://support.google.com/a/answer/2463723?hl=en>

NEW QUESTION # 100

Your organization is about to conduct its biannual risk assessment. You need to help identify security risks by quickly reviewing all security settings for Gmail, Drive, and Calendar. What should you do?

- **A. In the Google Admin console, review the security health page.**
- B. In the alert center, review all of the alerts.
- C. In each individual organizational unit (OU), review the security settings.
- D. In the reporting section of the Admin console, review the Gmail, Drive, and Calendar reports.

Answer: A

Explanation:

The security health page in the Google Admin console provides an overview of security settings and highlights potential risks across various services, including Gmail, Drive, and Calendar. This page offers a consolidated view of the security posture of your organization, making it the most efficient option for quickly identifying security risks in preparation for a risk assessment.

NEW QUESTION # 101

Your company frequently hires from five to ten interns for short contract engagements and makes use of the same generically named Google Workspace accounts (e.g., user1@your-company.com, user2@your-company.com, user3@your-company.com). The manager of this program wants all email to these accounts routed to the manager's mailbox account also.

What should you do?

- A. Setup address forwarding in each account's GMail setting menu.
- **B. Set up recipient address mapping in GMail Advanced Settings.**
- C. Give the manager delegated access to the mailboxes.
- D. Configure an Inbound Gateway route.

Answer: B

Explanation:

<https://support.google.com/a/answer/6297084#address>

NEW QUESTION # 102

Your organization has a data loss prevention (DLP) rule to detect and warn users about external sharing of sensitive files in Google Drive. You also want to prevent external users from downloading files with viewer permissions to their local machines. What should you do?

- A. Do nothing. View-only Drive files automatically prevent the user from downloading the files.

- B. Create a new DLP rule and set the scope to the organizational unit or group that you want to restrict
- C. Modify the existing DLP rule to Disable download, print, and copy for commenters and viewers
- D. Create a new DLP rule by using the existing content detector conditions but change the action for the new rule to Disable download, print, and copy for commenters and viewers

Answer: D

Explanation:

- * Access Admin Console: Log in to the Google Admin console using your administrator account.
- * Navigate to DLP Rules: Go to Apps > Google Workspace > Drive and Docs > Data loss prevention.
- * Create a New Rule: Click on Create a rule and choose to start with a template or create a custom rule.
- * Set Content Detector Conditions: Use the existing content detector conditions that identify sensitive files.
- * Configure Actions: Set the action to Disable download, print, and copy for commenters and viewers.

This ensures that external users with viewer permissions cannot download the files.

- * Apply Rule to Relevant OUs/Groups: Set the scope of the rule to the specific organizational units or groups where you want this restriction to apply.

- * Save and Implement: Save the rule and ensure it is activated. This will enforce the new restrictions for sensitive files shared externally.

NEW QUESTION # 103

A department at your company wants access to the latest AI-powered features in Google Workspace. You know that Gemini offers advanced capabilities and you need to provide the department with immediate access to Gemini's features while retaining control over its deployment to ensure that corporate data is not available for human review. What should you do?

- A. Enable Alpha features for the organization and assign Gemini licenses to all users.
- B. Enable Gemini for the department's organizational unit and assign Gemini licenses to users in the department.
- C. Enable Gemini for non-licensed users in that department so they have immediate access to the free service.
- D. Monitor Gemini adoption through the administrator console and wait for wider user adoption before assigning licenses.

Answer: B

Explanation:

To provide a specific department with immediate access to Gemini's features in Google Workspace while maintaining control and ensuring corporate data privacy, you need to enable Gemini for that department's organizational unit and assign the necessary licenses to the users within that OU. This approach allows for targeted deployment and ensures that the features are used within the governed Google Workspace environment.

Here's why option A is correct and why the others are not the appropriate solutions:

A). Enable Gemini for the department's organizational unit and assign Gemini licenses to users in the department.

Google Workspace allows administrators to manage services and features at the organizational unit (OU) level. By enabling Gemini specifically for the OU of the department that needs it, you grant access only to those users. Assigning Gemini licenses ensures that they have the required entitlements to use the advanced AI features. Importantly, when Gemini is enabled and used within a Google Workspace account with the appropriate controls, the data generated is governed by Google Workspace's data privacy and security commitments, ensuring corporate data is not available for human review in a way that compromises privacy.

Administrators have controls over how Gemini for Workspace interacts with organizational data.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation on "Turn Gemini for Google Workspace on or off for users" (or similar titles) explains how to control access to Gemini features at the organizational unit or group level. It also details the licensing requirements for Gemini for Workspace and how to assign these licenses to specific users.

Furthermore, documentation on "Data privacy and security in Gemini for Google Workspace" outlines how user data is handled and protected when using these features within a Google Workspace environment, emphasizing controls to prevent inappropriate human review of corporate data.

B). Monitor Gemini adoption through the administrator console and wait for wider user adoption before assigning licenses.

This approach delays providing the requested access to the department that needs Gemini immediately.

Monitoring adoption might be useful for broader rollouts, but it doesn't address the immediate need of the specific department.

Associate Google Workspace Administrator topics guides or documents reference: While the Admin console provides insights into usage and adoption of various Google Workspace services, it doesn't serve as the primary mechanism for granting initial access to new features like Gemini for specific teams.

C). Enable Gemini for non-licensed users in that department so they have immediate access to the free service.

There isn't a "free service" of Gemini directly integrated within Google Workspace that bypasses licensing and organizational controls in the way this option suggests. Gemini for Google Workspace is a licensed feature that needs to be enabled and assigned by the administrator. Enabling features for "non-licensed users" in a corporate environment without proper governance is not a standard or secure practice. It would likely mean users are accessing a consumer version of Gemini, which would not be subject to the same data privacy and security controls as the licensed Google Workspace version, potentially exposing corporate data to human review outside of the organization's policies.

Associate Google Workspace Administrator topics guides or documents reference: Google's documentation on Gemini for Workspace clearly outlines the licensing requirements and the integration within the Google Workspace environment, emphasizing administrative control over its deployment and usage.

D). Enable Alpha features for the organization and assign Gemini licenses to all users.

Enabling Alpha features for the entire organization carries significant risks as these features are still under development and may not be stable or fully secure. Assigning Gemini licenses to all users when only one department needs it is an unnecessary cost and expands the deployment before proper evaluation and targeted rollout. It also doesn't specifically address the need to limit access to the requesting department initially.

Associate Google Workspace Administrator topics guides or documents reference: Google's guidelines on release channels (Rapid, Scheduled, Alpha/Beta) strongly advise against enabling pre-release features like Alpha for production environments due to potential instability and lack of full support. Controlled rollouts to specific OUs are recommended for new features.

Therefore, the most appropriate action is to enable Gemini for the specific organizational unit of the requesting department and assign Gemini licenses to the users within that OU. This provides immediate access while maintaining administrative control and ensuring that the usage of AI features within the Google Workspace environment adheres to the organization's data privacy policies.
