These 3 formats of Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 exam preparation are easy to use. This is a printable Acquia Drupal-Site-Builder PDF dumps file. The Acquia Drupal-Site-Builder Pdf Dumps enables you to study without any device, as it is a portable and easily shareable format, thus you can study Acquia Drupal-Site-Builder dumps on your preferred smart device such as your smartphone or in hard copy format.

## Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q25-Q30):

### NEW QUESTION # 25

The site you are managing has a "Comments approval" process. You have moderators with appropriate permissions to review and approve comments. The moderators want to see all the unapproved comments sorted by the node on which they are posted, but they can't do this on the Comments approval page.

What is the simplest way to solve this problem?

- A. Have the content editor review comments by visiting the node instead of using the Comments page.
- B. Create an Export view, so the content editor can review comments in a spreadsheet.
- C. Create a View of unapproved comments and set the sort order to "Entity ID."
- **D. Edit the Comments View, and update the table settings to make the Entity ID field sortable.**

**Answer: D**

Explanation:

In Drupal 10 and Drupal 11, the administrative Comments listing is provided by the core comment View. In core's default `views.view.comment` configuration, the comments administration display uses the table style, includes the `entity_id` field labeled "Posted in", and that column is present in the table configuration.

However, core sets that column's table option to `sortable: false`, while other columns such as Subject, Author, and Updated are sortable. That is why moderators cannot sort the approval page by the content item the comment belongs to, even though the field is already there.

Because the existing approval page already uses a View, the simplest solution is to edit that View and enable sorting for the Entity ID / Posted in column in the table settings. Creating a brand-new View would work, but it is not the simplest option because it duplicates an existing administrative display. The other options do not address the actual issue with the current moderation screen. Drupal's content administration documentation also confirms that comments are managed from the Comments administration page, making improvement of that interface the most appropriate site-building solution.

### NEW QUESTION # 26

You have a website which is using a custom theme made specifically for that website. The client complains that content creators see an admin theme called "Claro" while creating or editing content. They want to see the content edit page in their own custom theme, but keep the other admin section in the Claro theme.

How can you achieve this?

- A. Give the Content Creator role permission to "View Admin Theme"
- B. On the Appearance page set admin theme as default theme
- **C. On Appearance page, unselect the checkbox "See the administration theme when editing or creating content"**
- D. Revoke the permission of viewing the custom theme for content creator role.

**Answer: C**

Explanation:

Drupal core provides a specific setting for whether node add/edit forms should use the administration theme.

On the Appearance page, this is the checkbox labeled "Use the administration theme when editing or creating content". When that setting is enabled, content creation and editing routes are treated as admin-theme routes; when it is disabled, those forms use the site's default front-end theme instead, while the rest of the administration area can still use the admin theme such as Claro. This behavior is implemented in core through the `node.settings` configuration value `use_admin_theme` and the node route subscriber that marks node operation routes as admin routes only when that setting is turned on.

That makes option A correct. Option B would not solve the requirement, because setting the admin theme as the default theme would affect the whole site's front-end presentation. Options C and D are incorrect because Drupal does not use a role permission like "View Admin Theme" to control this behavior for node edit pages.

The documented control for this requirement is the Appearance-page checkbox tied to `node.settings.use_admin_theme`.

### NEW QUESTION # 27

While building a new site, you are working with the default frontend theme. You have placed custom blocks in available regions.

After some time, you decide to install a new contributed theme, and set it as the default for the site.

After switching to the new theme, you notice that many of your blocks have disappeared!

What is the likely reason for this?

- A. The blocks have not yet been registered with the new theme.
- **B. The new theme's regions have different names from the regions in the old theme. Those blocks have been disabled.**
- C. The blocks were built in such a way that they are not compatible with the new theme. They need to be re-created.
- D. The new theme only allows system blocks, not custom blocks.

**Answer: B**

Explanation:

In Drupal 10 and Drupal 11, block placement is defined per theme. The Block Layout documentation explains that when placing a block, you are assigning it to a region in a specific theme, not globally for all themes. So when you switch the site's default theme, the new theme may have a different set of regions or different region names, and block placements from the previous theme may no longer map correctly.

Drupal's theming documentation is even more explicit: if a theme does not define a region that blocks were assigned to, those blocks are treated as assigned to an invalid region and are disabled . The Block module documentation also states that disabled blocks (blocks not assigned to any region in your theme) are never shown . This is exactly why blocks can appear to "disappear" after changing themes.

The other options do not match Drupal's documented behavior. Blocks do not need to be "registered" with a theme in this sense, contributed themes are not limited to system blocks, and custom blocks generally do not need to be recreated just because the theme changed. The issue is the theme-specific region mapping , which makes D the correct answer.

### NEW QUESTION # 28

You are using a contributed module named Lotus. You have read the module's documentation and ensured it is configured correctly. However, certain functionality of the module is not working as intended.

How should you find help?

(Select 2 options)

- A. Search for answers and ask questions in the module's issue queue on drupal.org.
- B. Ask questions in the drupal-support channel on IRC or in the support channel on Drupal Slack group.
- C. Email the module's maintainer and ask for help.
- D. Create a comment of type "support request" on the module's project page.

**Answer: A,B**

Explanation:

Drupal 10 and Drupal 11 documentation strongly recommend using community-supported channels for troubleshooting contributed modules. The primary and most appropriate place to seek help is the module's issue queue on drupal.org , where users can search for existing issues, report bugs, and ask questions. This ensures transparency, allows maintainers and contributors to track problems, and benefits the wider community. Therefore, option A is correct.

Additionally, Drupal has active community communication platforms such as Drupal Slack and IRC channels (like #drupal-support), where developers and site builders collaborate and provide real-time assistance. These are officially recognized community support channels, making option B correct.

Option C is incorrect because Drupal project pages do not use general comments for support; instead, all discussions should happen in the issue queue. Option D is discouraged because directly emailing maintainers bypasses the public support process and is not aligned with Drupal community best practices.

Thus, the correct and recommended ways to find help are using the issue queue and community support channels.

### NEW QUESTION # 29

You run a site that attracts almost all of its users from France, even though you created the site in Australia. A number of users have started complaining that content publication times do not match their local time.

Which two solutions allow users to view content in their local timezone?

- A. Set the default country to France
- B. Check the "Users may set their own time zone" option in the Regional settings menu
- C. Alter the default timezone to that of your target audience
- D. Configure the content types to use France's timezone by default

**Answer: B,C**

Explanation:

Drupal handles date and time display through regional settings and user account timezone preferences , not through content type configuration. The correct solutions are therefore A and C . Enabling "Users may set their own time zone" allows authenticated users to choose their own timezone in their user account settings, so dates such as content publication times are displayed according to each user's local timezone. This is the most accurate solution when users may come from different regions.

Changing the default timezone to that of your primary audience, in this case France, is also correct. Drupal uses the site default timezone for users who have not set a personal timezone, and for anonymous visitors.

This makes displayed times more appropriate for the majority of site visitors.

Option B is incorrect because Drupal does not provide timezone handling at the content type level. Timezone behavior is managed globally and per user, not per content type. Option D is also incorrect because setting the default country affects address-related defaults and locale-related behavior, but it does not control how Drupal displays timestamps. Therefore, the verified answers are A and C .

## NEW QUESTION # 30

.....

This is the reason why the experts suggest taking the Drupal-Site-Builder practice test with all your concentration and effort. The more you can clear your doubts, the more easily you can pass the Drupal-Site-Builder exam. PracticeDump Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) practice test works amazingly to help you understand the Acquia Drupal-Site-Builder Exam Pattern and how you can attempt the real Acquia Exam Questions. It is just like the final Drupal-Site-Builder exam pattern and you can change its settings.
