Taking full advantage of our Development-Lifecycle-and-Deployment-Architect Preparation exam and getting to know more about them means higher possibility of it. And if you have a try on our Development-Lifecycle-and-Deployment-Architect exam questions, you will love them.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q142-Q147):

NEW QUESTION # 142
Universal Containers recently added a new sales division to theEnsure that Record Type Ids match both Productiowhen migrating to Production, the Developer reports that Unit Tests are failing. What should an Architect do to ensure tests execute predictably?

- A. Ensure unit tests generate their own test data
- B. Ensure unit tests execute with seeAllData=true
- C. Ensure that Record Type Ids match both Production and Sandbox orgs
- D. Ensure executed Apex test run as valid users

Answer: A

NEW QUESTION # 143

Universal Containers (UC) innovative apps division is releasing an application which can be installed in their trading partners Salesforce environment. The partners can then build on top of the application with process builders and triggers so the container booking process can be integrated with the trading partners own processes. What is the recommended mechanism for releasing the application?

- A. Managed Package.
- B. Unmanaged Package.
- C. Change Sets.
- D. Zip file deployable by Force.Com Migration Tool.

Answer: A

Explanation:
Explanation
Managed package is the recommended mechanism for releasing an application that can be installed in other Salesforce environments. Managed packages allow for versioning, licensing, and upgradeability of the application. They also protect the intellectual property of the developer by hiding the source code of the Apex classes and Visualforce pages.

NEW QUESTION # 144

What are two advantages of automated test data loads over manual data loads Choose 2 answers

- A. FRED Automated loads are reliable in their results.
- B. Automated loads will increase costs.
- C. Automated loads cannot be scripted by CICD tools.
- D. Automated loads can be done with no human oversight.

Answer: B,D

NEW QUESTION # 145

5. Universal Containers (UC) is planning to move to Salesforce Sales Cloud and retire its homegrown on-premise system. As part of the project, UC will need to migrate 5 million Accounts, 10 million Contacts, and 5 million Leads to Salesforce.
Which three areas should be tested as part of data migration?
Choose 3 answers

- A. Data transformation against source system
- B. Contact association with correct Account
- C. Page layout assignments
- D. Account and Lead ownership
- E. Lead assignment

Answer: A,B,D

NEW QUESTION # 146

Universal Containers (UC) has four different business units (BUS) with different processes that share global customers. They have implemented a multi-org strategy with one org consolidating customer 360-degree view, and four orgs for the different BUS. Each of the BU orgs read and write customer information from/to the customer 360-degree view org in real time. UC is now launching a new BU that will use Salesforce. It does not share customers with the other BUS and needs flexibility in their Business processes. What should an architect recommend as org strategy for this new BU

- A. Use the same Salesforce org of another BU that shares geographical localization with the new BU.
- B. Deploy the new BU in customer 360-degree view org, and read and write customer information from it without need of custom integration.
- C. Use a new Salesforce org for the new BU, and customize integration so that it reads and writes customer information from

the customer data org
- D. Use a new stand-alone Salesforce org for the new BU, not integrated with the others.

Answer: D

Explanation:
The best option for the new BU is to use a new stand-alone Salesforce org, not integrated with the others. This will allow the new BU to have flexibility in their business processes, without affecting or being affected by the other BUs. Since the new BU does not share customers with the other BUs, there is no need to integrate with the customer 360-degree view org, which would add complexity and cost. Deploying the new BU in the customer 360-degree view org is not a good idea, as it would create confusion and duplication of data, as well as limit the customization options for the new BU. Using the same Salesforce org of another BU that shares geographical localization with the new BU is also not a good idea, as it would create conflicts and dependencies between the two BUs, as well as reduce the performance and security of the org. Using a new Salesforce org for the new BU, and customizing integration so that it reads and writes customer information from the customer data org is unnecessary and inefficient, as the new BU does not need to access or update the customer data of the other BUs.

NEW QUESTION # 147
......

Holding a Development-Lifecycle-and-Deployment-Architect certification in a certain field definitely shows that one have a good command of the Development-Lifecycle-and-Deployment-Architect knowledge and professional skills in the related field. However, it is universally accepted that the majority of the candidates for the Salesforce Certified Development Lifecycle and Deployment Architect exam are those who do not have enough spare time and are not able to study in the most efficient way.
