

Oracle 1z0-1046-25 Exam Questions - Easy Way To Prepare [2026]

BONUS!!! Download part of DumpExam 1z0-1046-25 dumps for free: https://drive.google.com/open?id=1fbTYTEoIH9s11_3nUSboZoGUkoxhgt7a

DumpExam is fully aware of the fact that preparing successfully for the Oracle 1z0-1046-25 exam in one go is a necessity because of the expensive registration fee. For applicants like you, success in the Oracle Global Human Resources Cloud 2025 Implementation Professional exam on the first attempt is crucial to saving money and time. Our Free Oracle 1z0-1046-25 Exam Questions will help you decide fast to buy the premium ones.

Sometimes many people find they always have one begin that if I have money.....If so I advise you apply for an IT certification steadfastly. Oracle 1z0-1046-25 valid exam questions and answers give an excellent beginning for your dream. If you pass exams and get a certification, you can obtain a high-salary job and realize your goal. 1z0-1046-25 Valid Exam Questions and answers help you pass exam certainly. We have a series of products for IT certification exams.

>> Practice 1z0-1046-25 Exam Pdf <<

100% Pass 2026 Oracle High Hit-Rate 1z0-1046-25: Practice Oracle Global Human Resources Cloud 2025 Implementation Professional Exam Pdf

Supply the candidates with better product, quicker response. If you need Oracle 1z0-1046-25 practice test, DumpExam is good choice. And you don't regret purchasing DumpExam Oracle 1z0-1046-25 test. Through the process of IT certification exam, there is a very simple technique for helping you to pass Oracle 1z0-1046-25 Certification. DumpExam Oracle 1z0-1046-25 exam dumps are great. We guarantee that you must pass 1z0-1046-25 exam. If you fail, we will REFUND you purchase price. 100% through

Oracle Global Human Resources Cloud 2025 Implementation Professional Sample Questions (Q27-Q32):

NEW QUESTION # 27

Challenge 4

Manage Business Unit

Scenario

An additional business unit is required for the newly acquired company to reflect the business rules and policies that must be enforced within the organization.

Task

Create a Business Unit for the technician group, where:

The Code is X Tech Business Unit

The Default set is COMMON

Answer:

Explanation:

See the solution in Explanation below.

Explanation:

This task requires creating a business unit in Oracle Global Human Resources Cloud for the technician group of a newly acquired company. The business unit must have a Code of X Tech Business Unit and a Default Set of COMMON. Below is a verified, step-by-step solution based on Oracle's official documentation, ensuring accuracy and compliance with the system's functionality as of the latest releases Step-by-Step Solution Step 1: Log in to Oracle Fusion Applications

* Action: Log in to Oracle Fusion Applications using a user account with privileges such as Application Implementation Consultant or HCM Application Administrator. These roles grant access to the Setup and Maintenance work area.

* Explanation: The Setup and Maintenance work area is the central hub for configuration tasks, including managing business units. The user must have permissions to access the Workforce Structures functional area and the Manage Business Unit task. Roles like Application Implementation Consultant include the necessary privileges (e.g., Manage Business Unit duty role).

* Verification: Oracle documentation confirms that setup tasks require specific security roles, and the Manage Business Unit task is restricted to authorized users.

Oracle Global Human Resources Cloud: Implementing Global Human Resources, Section: Security for Setup Tasks.

Step 2: Navigate to Setup and Maintenance

Action:

From the Oracle Fusion Applications home page, click the Navigator icon (hamburger menu) in the top-left corner.

Under the Tools section, select Setup and Maintenance.

Explanation: The Setup and Maintenance work area provides access to all implementation and configuration tasks, organized by functional areas. This is the entry point for accessing the Manage Business Unit task.

Verification: Oracle's user interface consistently places Setup and Maintenance under the Navigator's Tools section, as confirmed in both Redwood and responsive interfaces.

Reference: Oracle Global Human Resources Cloud: Implementing Global Human Resources, Section: Setup and Maintenance Overview.

Step 3: Select the Workforce Structures Functional Area and Locate the Task Action:

In the Setup and Maintenance work area, click the Functional Area dropdown and select Workforce Structures.

In the task list, locate Manage Business Unit by scrolling or using the search bar (type "Manage Business Unit").

Click the Go to Task icon (typically a play button or arrow) next to Manage Business Unit to open the task.

Explanation: The Workforce Structures functional area includes tasks related to organizations, including business units. The Manage Business Unit task is designed to create and manage business units, which enforce business rules and policies. Using the search bar ensures quick access if the task list is extensive.

Verification: Oracle documentation lists Manage Business Unit under Workforce Structures, accessible via the Setup and Maintenance UI in both Redwood and responsive interfaces.

Reference: Oracle Global Human Resources Cloud: Using Global Human Resources, Section: Manage Business Unit.

Step 4: Initiate Creation of a New Business Unit

Action:

On the Manage Business Unit page, click the Create button (typically a plus sign (+) or labeled "Create" in the Redwood interface). This opens the Create Business Unit page for entering the business unit details.

Explanation: The Manage Business Unit page displays a searchable list of existing business units. The Create action starts the process of adding a new business unit, opening a form where the code, name, and default set can be specified.

Verification: Oracle's UI for managing business units includes a Create button, as confirmed in documentation and Redwood interface updates (24C and later).

Reference: Oracle Global Human Resources Cloud: Implementing Global Human Resources, Section: Creating Business Units.

Step 5: Enter the Business Unit Details

Action: On the Create Business Unit page, enter the following details as provided in the scenario:

Name: Enter X Tech Business Unit.

Code: Enter X Tech Business Unit.

Default Set: Search for and select COMMON.

Click the Search icon (magnifying glass) in the Default Set field.

Enter COMMON in the search criteria and click Search.

Select COMMON and click OK.

Status: Ensure Active is selected (default setting).

Effective Start Date: Enter 04/15/2025 (current date, unless a specific date is required for the technician group).

Description (optional): Enter a description, e.g., "Business unit for X Cloud Vision technician group".

Country: Select United States (based on the company's location in Michigan, as per prior tasks).

Explanation:

Name and Code: In Oracle HCM Cloud, the Name and Code for a business unit are often the same for clarity, and the scenario specifies X Tech Business Unit for the code, which is used as the name as well. The code is a unique identifier in the system.

Default Set: The COMMON set is a predefined reference data set used to share jobs, departments, locations, and grades across multiple business units. Selecting COMMON ensures the technician group's workforce structures are accessible broadly unless restricted later.

Status: Active ensures the business unit is immediately usable for transactions and policies.

Effective Start Date: Oracle uses effective dating for business units to track validity. The current date (04/15/2025) is appropriate unless otherwise specified.

Description: While optional, a description aids in identifying the business unit's purpose, especially for the technician group.

Country: United States aligns with the company's Michigan location, ensuring compliance with regional settings.

Verification: Oracle documentation specifies mandatory fields (Name, Code, Default Set, Country) and optional fields (Description) for business unit creation. The COMMON set is a standard option, and the details align with US-based configurations.

Reference: Oracle Global Human Resources Cloud: Using Global Human Resources, Section: Business Unit Fields.

Step 6: Configure Additional Settings (if prompted)

Action:

Reporting Establishment: If prompted, leave blank or select an existing establishment tied to the legal entity (e.g., X Cloud Vision from Question 143), but this is not required by the scenario.

Manager: If a manager field appears, leave blank, as no manager is specified.

Payroll Statutory Unit: If prompted, leave blank, as the PSU is handled by the legal entity (X Cloud Vision) per Question 143.

Explanation:

Reporting Establishment: Business units may link to establishments for reporting, but the scenario does not require this.

Manager: Assigning a manager is optional and not specified here.

Payroll Statutory Unit: The PSU is already set at the legal entity level, so no additional PSU configuration is needed for the business unit.

Verification: Oracle documentation confirms that fields like Reporting Establishment are optional, and PSU settings are typically managed at the legal entity level.

Reference: Oracle Global Human Resources Cloud: Implementing Global Human Resources, Section: Business Unit Configurations.

Step 7: Save the Business Unit

Action:

After entering all details, click Save and Close (or Save if further edits are needed).

If prompted, confirm the creation of the business unit.

Explanation: Saving creates the business unit in the system, making it available for enforcing business rules and policies for the technician group. The Save and Close button finalizes the task, while Save allows additional configurations if needed. Oracle validates mandatory fields before saving.

Verification: Oracle's UI includes Save and Save and Close options for business unit creation, as confirmed in documentation for both responsive and Redwood interfaces.

Reference: Oracle Global Human Resources Cloud: Implementing Global Human Resources, Section: Saving Business Units.

Step 8: Verify the Business Unit Creation

Action:

Return to the Manage Business Unit page.

In the search criteria, enter X Tech Business Unit and click Search.

Confirm that the new business unit appears with the details:

Name: X Tech Business Unit

Code: X Tech Business Unit

Default Set: COMMON

Status: Active

Effective Start Date: 04/15/2025

Country: United States

Description (if entered): Business unit for X Cloud Vision technician group Explanation: Verification ensures the business unit was created correctly and is ready to enforce rules for the technician group. Searching by name or code confirms the record's accuracy and checks for errors in data entry.

Verification: Oracle documentation emphasizes verifying setup tasks by searching created records, and the Manage Business Unit page supports detailed searches.

Reference: Oracle Global Human Resources Cloud: Using Global Human Resources, Section: Searching Business Units.

Step 9: Prepare for Business Rules and Policies (Optional)

Action:

Note that the X Tech Business Unit can now be used in tasks like Manage HCM Role Provisioning Rules, Manage Approval Policies, or Manage Data Access to define specific rules and policies for the technician group.

For example, assign the business unit to specific departments or jobs in the Manage Departments or Manage Jobs tasks to align with the technician group's scope.

Explanation: The scenario mentions enforcing business rules and policies, which occurs after business unit creation in separate tasks. The X Tech Business Unit is now available for these configurations, ensuring the technician group operates under tailored settings (e.g., approval workflows, data access). This step is optional, as the task focuses on creation, but it highlights the business unit's purpose.

Verification: Oracle documentation confirms that business units are used to scope rules and policies, and the created unit will appear in relevant setup tasks.

Reference: Oracle Global Human Resources Cloud: Implementing Global Human Resources, Section: Using Business Units.

Detailed Explanation

Purpose of Business Units: Business units organize business functions (e.g., HR, payroll, approvals) and enforce rules and policies. The X Tech Business Unit ensures the technician group operates under specific settings, supporting the acquired company's integration.

Default Set (COMMON): The COMMON set allows the business unit to share jobs, departments, locations, and grades across the enterprise, reducing setup complexity unless isolation is needed (e.g., via XTECH from Question 144). This aligns with broad accessibility for the technician group.

Code and Name: The Code (X Tech Business Unit) is a unique system identifier, and the Name matches for consistency, as is common in Oracle HCM configurations.

Country Context: United States ties the business unit to the company's Michigan operations, ensuring compliance with regional settings.

Redwood Interface: In the Redwood interface (24C and later), the Manage Business Unit page may feature enhanced UI elements (e.g., streamlined forms, inline validation), but the fields and steps remain consistent with the responsive interface.

Effective Dating: The effective start date ensures the business unit is active, supporting future changes if the technician group's scope evolves.

Key Considerations

Accuracy: The Code and Name (X Tech Business Unit) and Default Set (COMMON) must be entered exactly as specified to ensure system recognition and alignment with the scenario.

Uniqueness: The Code must be unique. If X Tech Business Unit exists, an error occurs, requiring a unique code.

Default Set Availability: The COMMON set is a standard Oracle set. If not found, it indicates a configuration issue, as COMMON is always available.

Security: Only users with the Manage Business Unit privilege can perform this task. Role mismatches require administrative intervention.

Policy Setup: The business unit is ready for rule enforcement, but additional tasks (e.g., approval policies) are needed to fully implement the scenario's intent.

Potential Challenges and Solutions

Access Denied: If the user lacks the Manage Business Unit privilege, an error occurs. Solution: Assign the Application Implementation Consultant role via Security Console.

Duplicate Code: If X Tech Business Unit already exists, the system prevents saving. Solution: Search for the code first; if it exists, coordinate with the implementation team to resolve conflicts or use a different code.

Redwood UI Variations: The Redwood interface may use different button labels (e.g., Add instead of Create) or layouts. Solution: Follow field prompts and ensure Code and Default Set are completed.

COMMON Set Not Found: If COMMON is missing, it may indicate a corrupted setup. Solution: Verify set availability in Manage Reference Data Sets or contact Oracle Support.

Country Selection: If United States is not selected, regional settings may misalign. Solution: Confirm United States to match the Michigan context.

NEW QUESTION # 28

The Human Resource Representative of the organization is trying to set up the Jobs and Positions for the enterprise. What are the three options that the Human Resource Representative should be aware of regarding Jobs and Positions? (Choose three.)

- A. Jobs are shared by Sets and Positions are assigned to Business Units
- B. When using positions, the grades that are specified for the job become the default grades for the position
- C. Positions may be added to a specific department and location
- D. Jobs and Positions are shared by Sets

Answer: A,B,C

Explanation:

Per the "Managing Workforce Structures" guide:

Option A: True. Grades defined for a Job default to the Position when created.

Option B: False. Jobs are Set-enabled, but Positions are tied to business units, not shared by Sets.

Option C: True. Jobs are shared across Sets; Positions are specific to Business Units.

Reference: Oracle Global Human Resources Cloud - Managing Workforce Structures, "Jobs and Positions Configuration" section.

NEW QUESTION # 29

You are implementing Core HR for a customer. Work timings, standard working hours, organization manager, and cost center information must be captured while setting up the work structure. Identify the organization type against which you can maintain this information.

- A. Division
- B. Reporting Establishment
- C. Department
- D. Business Unit
- E. Legal Entity
- F. Enterprise

Answer: C

Explanation:

Full Detailed in Depth Explanation:

In Oracle HCM Cloud, the work structure consists of various organization types (e.g., Enterprise, Legal Entity, Business Unit, Department, Division) that serve different purposes. The requirement here is to identify the organization type where work timings, standard working hours, organization manager, and cost center information can be maintained.

Option A ("Department") is correct. Departments in Oracle HCM Cloud are operational units within the work structure where detailed workforce management information, such as work timings (e.g., shift schedules), standard working hours, organization manager (e.g., department manager), and cost center details, can be defined. The "Manage Departments" task allows administrators to configure these attributes, making Department the appropriate organization type for this data. This is supported by the "Implementing Global Human Resources" guide, which details how departments support operational HR data.

Option B ("Business Unit") is higher-level and used for segregating HR and financial data, but it does not typically hold detailed work timings or manager assignments.

Option C ("Enterprise") defines the overarching structure and does not manage operational details like work hours or cost centers.

Option D ("Legal Entity") represents legal employers and focuses on compliance and payroll, not detailed work schedules.

Option E ("Division") is a higher-level grouping for reporting and does not capture these specific attributes.

Option F ("Reporting Establishment") is used for regulatory reporting and not for operational HR data like work timings.

References:

"Oracle Global Human Resources Cloud: Implementing Global Human Resources" - Chapter on Workforce Structures, section on Departments.

"Oracle Human Resources Cloud: Using Workforce Structures" - Department configuration details.

NEW QUESTION # 30

When an HR specialist searches for Awards and Honors, such as "PhD," the Person Gallery page displays only the direct reports of the HR specialist who comply with the honor. When the HR specialist searches for areas of expertise, such as "Oracle Global Human Resources Cloud," it displays all the employees of the organization who have Oracle Global Human Resources Cloud as their areas of expertise. Identify the reason for this behavior.

- A. HR has access to Oracle Global Human Resources Cloud department.
- B. HR does not have access to other departments where employees are "PhD."
- C. HR does not have access to the "Experience and Qualification" card.
- D. PhD is a sensitive keyword and is used elsewhere in the person's information.
- E. Areas of expertise is public information.

Answer: E

Explanation:

In Oracle HCM Cloud's Person Gallery, search results depend on data visibility and security: Awards and Honors (e.g., "PhD") are restricted by the HR specialist's area of responsibility (AOR), typically limited to direct reports unless broader access is granted. Areas of Expertise (e.g., "Oracle Global Human Resources Cloud") are designated as public information by default, visible to all users with Person Gallery access, regardless of AOR, unless explicitly restricted via security profiles.

Option A is incorrect—the "Experience and Qualification" card is accessible but scoped to AOR. Option B misattributes the issue to departments—visibility is AOR-based. Option D (sensitive keyword) lacks evidence. Option E (department access) is irrelevant.

Option C correctly identifies areas of expertise as public, explaining the broader search results per Oracle's security model.

References: Oracle Docs - "Using Global Human Resources" (docs.oracle.com, published 2023-10-03), Person Gallery section.

NEW QUESTION # 31

Your customer wants to know how many employees are leaving the organization on their own. Identify the correct sequence of steps that you need to perform to meet this requirement.

- A. Create a new action > Associate it with an existing action type > Create a new action reason and use it during termination.
- B. Create a new action type > Create a new action > Create a new action reason and use it during termination.
- C. Create a new action reason and associate it with the available action type. Use it during termination.
- D. Create a new action > Create a new reason and use it during termination.
- E. Create a new action type > Create a new action reason and use it during termination.

Answer: C

Explanation:

Full Detailed in Depth Explanation:

To track voluntary terminations in Oracle HCM Cloud, you need to configure Actions and Action Reasons to categorize terminations accurately, then use reporting to analyze the data.

Option C ("Create a new action reason and associate it with the available action type. Use it during termination") is correct. The simplest and most accurate sequence is:

Use an existing Action Type (e.g., Termination).

Create a new Action Reason (e.g., "Voluntary Resignation") in "Manage Action Reasons." Associate it with the Termination Action Type.

Apply this reason during termination processes. This leverages existing setups efficiently, as explained in the "Implementing Global Human Resources" guide.

Option A omits associating the reason with an Action Type.

Option B overcomplicates by creating a new Action Type, which isn't necessary.

Option D skips creating an Action, which is required for proper tracking.

Option E reverses the logical order and assumes an unnecessary new Action.
