

# DP-300 Exam Pass Guide & New DP-300 Dumps Ebook

P.S. Free & New DP-300 dumps are available on Google Drive shared by Prep4cram: <https://drive.google.com/open?id=1JPx28jLss9bTXZC5DcXiGUN1ZOuCntSq>

After successful competition of the DP-300 certification, the certified candidates can put their career on the right track and achieve their professional career objectives in a short time period. However, to pass the DP-300 Exam you have to prepare well. For the quick DP-300 exam preparation the DP-300 Questions are the right choice.

The second form is Administering Relational Databases on Microsoft Azure (DP-300) web-based practice test which can be accessed through online browsing. The DP-300 web-based practice test is supported by browsers like Firefox, Microsoft Edge, Microsoft Chrome, and Safari. You don't need to install any plugins or software to attempt the DP-300 web-based practice test. This online Microsoft DP-300 exam is also compatible with all operating systems.

## New DP-300 Dumps Ebook, DP-300 Valid Test Preparation

You will have the chance to renew your knowledge while getting trustworthy proof of your expertise with the Microsoft DP-300 exam. After passing the Microsoft DP-300 certification exam, you can take advantage of a number of extra benefits. The Microsoft DP-300 Certification test, however, is a valuable and difficult credential. But with the correct concentration, commitment, and DP-300 exam preparation, you could ace this test with ease.

## What is Microsoft DP-300 Exam

DP-300 Administering Relational Databases on the Microsoft Azure certification is the optimal target audience for the exam. You need to confirm whether the exam is an ideal option for your career goals or not. The perfect candidates for the DP-300 exam are Data Source Monitoring Specialists and Data Source Administrators. Certified Prospects work would primarily include on-premises and cloud-based relational database monitoring, based on Microsoft Azure and Microsoft SQL Web Server data solutions. The role of certified candidates for the DP-300 exam would certainly be to fulfill the responsibilities.

Application and monitoring of functional aspects of hybrid and cloud-based native information systems services based on Microsoft SQL Web Server and also on Microsoft Azure data solutions. Use of numerous tools and techniques to assist in daily database administration tasks, such as applying knowledge of using T-SQL for administrative administration purposes. Provides efficiency management, planning, protection, optimization, and monitoring for sophisticated relational data source options. Works collaboratively with Azure Data Engineers to monitor operational aspects of information platform solutions.

## Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q350-Q355):

### NEW QUESTION # 350

You have an Azure virtual machine named Server1 that has Microsoft SQL Server installed. Server1 contains a database named DB1.

You have a logical SQL server named ASVR1 that contains an Azure SQL database named ADB1.

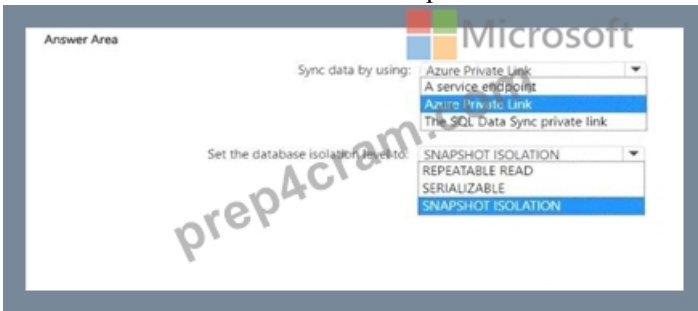

You plan to use SQL Data Sync to migrate DB1 from Server1 to ASVR1.

You need to prepare the environment for the migration. The solution must ensure that the connection from Server1 to ADB1 does

NOT use a public endpoint.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Answer Area

Explanation:

### NEW QUESTION # 351

You have an Azure data factory that has two pipelines named PipelineA and PipelineB.

PipelineA has four activities as shown in the following exhibit.

PipelineB has two activities as shown in the following exhibit.

You create an alert for the data factory that uses Failed pipeline runs metrics for both pipelines and all failure types. The metric has the following settings:

Operator: Greater than

Aggregation type: Total

Threshold value: 2

Aggregation granularity (Period): 5 minutes

Frequency of evaluation: Every 5 minutes

Data Factory monitoring records the failures shown in the following table.

Pipeline	Activity	Time
PipelineA	Activity1	31-Jan-2020 10:44:00
PipelineA	Activity3	31-Jan-2020 10:47:00
PipelineB	Activity1	31-Jan-2020 10:50:00

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
An alert notification was sent after the failure of Activity1 in PipelineA.	<input type="radio"/>	<input type="radio"/>
An alert notification was sent after the failure of Activity3 in PipelineA.	<input type="radio"/>	<input type="radio"/>
An alert notification was sent after the failure of Activity1 in PipelineB.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
An alert notification was sent after the failure of Activity1 in PipelineA.	<input type="radio"/>	<input checked="" type="radio"/>
An alert notification was sent after the failure of Activity3 in PipelineA.	<input type="radio"/>	<input checked="" type="radio"/>
An alert notification was sent after the failure of Activity1 in PipelineB.	<input type="radio"/>	<input checked="" type="radio"/>

### NEW QUESTION # 352

You have an Azure subscription that is linked to a hybrid Azure Active Directory (Azure AD) tenant. The subscription contains an Azure Synapse Analytics SQL pool named Pool1.

You need to recommend an authentication solution for Pool1. The solution must support multi-factor authentication (MFA) and database-level authentication.

Which authentication solution or solutions should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Graphical user interface, text, application, chat or text message Description automatically generated

**MFA:**

**Database-level authentication:**

Box 1: Azure AD authentication

Azure Active Directory authentication supports Multi-Factor authentication through Active Directory Universal Authentication.

Box 2: Contained database users

Azure Active Directory Uses contained database users to authenticate identities at the database level.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql-data-warehouse/sql-data-warehouse-authentication>

### NEW QUESTION # 353

You need to configure user authentication for the SERVER1 databases. The solution must meet the security and compliance requirements.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer

area and arrange them in the correct order.

**Actions**

- Create a user in the master database
- Modify the Azure SQL server administrator account
- Create contained database users
- Create an Azure AD administrator for the logical server
- Connect to the databases by using an Azure AD account
- Enable the contained database authentication option

**Answer Area**

**Answer:**

Explanation:

**Answer Area**

---

Create an Azure Active Directory administrator.

---

---

Create contained database users in your database mapped to Azure AD identities.

---

---

Connect to your database by using Azure AD identities.

---

- 1 - Create an Azure Active Directory administrator.
- 2 - Create contained database users in your database mapped to Azure AD identities.
- 3 - Connect to your database by using Azure AD identities.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/database/authentication-aad-overview>

#### NEW QUESTION # 354

You are building a database backup solution for a SQL Server database hosted on an Azure virtual machine. In the event of an Azure regional outage, you need to be able to restore the database backups. The solution must minimize costs.

Which type of storage accounts should you use for the backups?

- A. locally-redundant storage (LRS)
- B. read-access geo-redundant storage (RA-GRS)
- C. geo-redundant storage
- D. zone-redundant storage (ZRS)

**Answer: B**

Explanation:

Geo-redundant storage (with GRS or GZRS) replicates your data to another physical location in the secondary region to protect

against regional outages. However, that data is available to be read only if the customer or Microsoft initiates a failover from the primary to secondary region.

When you enable read access to the secondary region, your data is available to be read if the primary region becomes unavailable. For read access to the secondary region, enable read-access geo-redundant storage (RA-GRS) or read-access geo-zone-redundant storage (RA-GZRS).

Incorrect Answers:

A: Locally redundant storage (LRS) copies your data synchronously three times within a single physical location in the primary region. LRS is the least expensive replication option, but is not recommended for applications requiring high availability.

C: Zone-redundant storage (ZRS) copies your data synchronously across three Azure availability zones in the primary region.

D: Geo-redundant storage (with GRS or GZRS) replicates your data to another physical location in the secondary region to protect against regional outages. However, that data is available to be read only if the customer or Microsoft initiates a failover from the primary to secondary region.

## NEW QUESTION # 355

.....

The emerging Microsoft field creates a space for Administering Relational Databases on Microsoft Azure (DP-300) certification exam holders to accelerate their careers. Many unfortunate candidates don't get the Microsoft DP-300 certification because they prepare for its Administering Relational Databases on Microsoft Azure (DP-300) exam questions from a Microsoft DP-300 exam that dumps outdated material. It results in a waste of time and money. You can develop your skills and join the list of experts by earning this Administering Relational Databases on Microsoft Azure (DP-300) certification exam.
