Oracle Data Platform 2025 Foundations Associate Sample Questions (Q31-Q36):

NEW QUESTION # 31

What is the FINAL release supporting the non-CDB architecture?

- A. Oracle Database 21c
- B. Oracle Database 23c
- C. Oracle Database 18c
- **D. Oracle Database 19c**

Answer: D

Explanation:

The final release supporting the "non-CDB (non-Container Database)" architecture is "Oracle Database 19c" (B). Oracle deprecated the non-CDB architecture starting with 20c (never fully released) and mandated the multitenant architecture (CDB with PDBs) from 21c onward. 19c, as a long-term support release, was the last to support non-CDB databases, with Oracle recommending migration to multitenant in subsequent versions like 23c. Oracle's documentation confirms 19c as the end of non-CDB support.

NEW QUESTION # 32

What are two typical reasons why customers CANNOT move their database into the public cloud?

- A. Total Cost of Ownership in public cloud is higher than on-premises
- **B. Regulations that prevent moving data into the public cloud**
- C. Public cloud does not provide storage for more than 10TB
- **D. Putting data in the cloud would break data residency rules**

Answer: B,D

Explanation:

Customers may not move databases to the public cloud due to "Putting data in the cloud would break data residency rules" (A), where laws mandate data remain in specific regions, and "Regulations that prevent moving data into the public cloud" (B), such as industry-specific compliance requirements (e.g., GDPR, HIPAA). "Total Cost of Ownership in public cloud is higher" (C) is a consideration but not a universal barrier, and "Public cloud does not provide storage for more than 10TB" (D) is false, as OCI offers vast storage options. Oracle's cloud adoption guides cite residency and regulatory constraints as common blockers.

NEW QUESTION # 33

What three typical data types/models are covered by Oracle's Converged Database?

- **A. Graph**
- B. Events
- **C. Relational**
- D. Terraform
- **E. Spatial**

Answer: A,C,E

Explanation:

Oracle's "Converged Database" supports multiple data types/models, including "Spatial" (B) for geospatial data, "Graph" (D) for relationship analytics, and "Relational" (E) for traditional structured data. "Events" (A) is not a distinct data model but a use case, and "Terraform" (C) is an infrastructure tool, not a data type. Oracle's documentation lists Spatial, Graph, and Relational among others (e.g., JSON, XML) as core converged capabilities.

NEW QUESTION # 34

Which statements are included in default configuration for automatic database backups?

- A. Backups occur weekly
- B. Archive redo log files are backed up every 30 minutes
- C. Retention period is set at 14 days
- D. Backups are executed on primary site

Answer: A

Explanation:

The default configuration for automatic database backups in OCI (e.g., Autonomous Database) includes "Backups occur weekly" (A), with daily incremental and weekly full backups. "Archive redo log files are backed up every 30 minutes" (B) is not default (it's real-time logging), "Retention period is set at 14 days" (C) is incorrect (default is 60 days), and "Backups are executed on primary site" (D) is vague but not a standard config statement. Oracle's backup documentation specifies weekly full backups as default.

NEW QUESTION # 35

Oracle Lakehouse provides extensive data processing capabilities, to accommodate the migration of existing architectures or the creation of new, agile ones. Which service does NOT provide data processing on Oracle Cloud Infrastructure (OCI) Lakehouse?

- A. Big Data Service
- B. OCI Data Flow
- C. Autonomous Database
- D. NoSQL Service

Answer: D
