Salesforce Accredited B2B Commerce Developer Sample Questions (Q221-Q226):

NEW QUESTION # 221

Which three pages should be enabled for the Guest user profile for a storefront to have anonymous checkout?
(3 answers)

- A. OrderView
- B. CheckoutNew
- C. OrderConfirmation

- D. CCPaymentInfo
- E. Checkout

Answer: B,C,D

Explanation:

Three pages that should be enabled for the Guest user profile for a storefront to have anonymous checkout are:

- * CCPaymentInfo: This page allows the guest user to enter their payment information, such as credit card number, expiration date, and security code. The page also displays the order summary and total amount.
- * CheckoutNew: This page allows the guest user to enter their shipping and billing information, such as name, address, phone number, and email. The page also displays the cart items and shipping options.
- * OrderConfirmation: This page displays the confirmation message and order number after the guest user places their order. The page also provides a link to view the order details or print the invoice. Salesforce References: B2B Commerce and D2C Commerce Developer Guide, Anonymous Checkout

NEW QUESTION # 222

In which three ways should useful debugging information in Salesforce B2B Commerce implementation be garnered? (3 answers) A) Enabling the logging token via

- A. Enabling debugging options for the current user and visually inspecting the Salesforce debug logs.
- B. Admin and subsequently inspecting the logs via the browser console.
- C. Placing a System.debug() statement anywhere in the class being debugged.
- D. Logging into the community as a system administrator to identify any potential permissions or Visualforce exceptions.
- E. Logging a case with Salesforce support to enable advanced debugging options.

Answer: A,B,D

Explanation:

Useful debugging information in Salesforce B2B Commerce implementation can be garnered in three ways:

- * Enabling the logging token via Admin and subsequently inspecting the logs via the browser console. This will enable logging messages and errors to the browser console, which can be viewed by opening the Developer Tools in the browser. The logging token can be enabled by setting the value of CO.logToken to true in CCAdmin.
- * Enabling debugging options for the current user and visually inspecting the Salesforce debug logs. This will enable logging messages and errors to the Salesforce debug logs, which can be viewed by opening the Debug Logs page in Salesforce Setup. The debugging options can be enabled by creating a Debug Level and a Trace Flag for the current user in Salesforce Setup.
- * Logging into the community as a system administrator to identify any potential permissions or Visualforce exceptions. This will allow viewing any errors or warnings that may occur on the community pages due to insufficient permissions or Visualforce issues. The system administrator can also access CCAdmin and other tools from within the community. Salesforce References: B2B Commerce and D2C Commerce Developer Guide, Logging, Debug Your Code

NEW QUESTION # 223

Which format is the custom Salesforce field with the API name

"My_Field_Name__c" transformed onto by default in Salesforce B2B Commerce?

- A. myfieldname
- B. myFieldName
- C. MyFieldName
- D. My_Field_Name__c

Answer: B

Explanation:

Explanation

The format that the custom Salesforce field with the API name My_Field_Name__c is transformed onto by default in Salesforce B2B Commerce is myFieldName. This is done to follow the JavaScript naming convention and to avoid conflicts with the standard Salesforce fields and relationships. The transformation rules are as follows:

- * Remove any namespace prefix from the field name, such as ccrz__ or cloudcraze__.
- * Remove any underscores from the field name and capitalize the first letter of each word after an underscore, such as MyFieldName.

* Lowercase the first letter of the field name, such as myFieldName. Salesforce References: B2B Commerce and D2C Commerce Developer Guide, Query Transformation

NEW QUESTION # 224

In which two ways can events fired from Lightning web components be handled?

- A. Listening for all possible events at the document root
- B. Adding callbacks to components
- C. Programmatically adding event listeners
- D. Attaching handlers to DOM elements

Answer: C,D

Explanation:

Explanation

Two ways that events fired from Lightning web components can be handled are programmatically adding event listeners and attaching handlers to DOM elements. Programmatically adding event listeners is a way of handling events by using JavaScript code to register functions that are invoked when an event occurs. The developer can use methods such as `addEventListener` or `@wire` to add event listeners to components or services that fire events. Attaching handlers to DOM elements is a way of handling events by using HTML attributes to bind functions that are invoked when an event occurs. The developer can use attributes such as `onclick` or `onchange` to attach handlers to DOM elements that fire events. Adding callbacks to components is not a valid way of handling events fired from Lightning web components, as it is not related to event handling, but rather to asynchronous programming. Listening for all possible events at the document root is not a valid way either, as it is not efficient or recommended for event handling, as it can cause performance issues or conflicts with other event listeners. Salesforce References: [Lightning Web Components Developer Guide: Handle Events], [Lightning Web Components Developer Guide: Communicate with Events]

NEW QUESTION # 225

A configuration value, `CO.NewOrder`, is set to `TRUE`. What is one way of preventing an existing payment page from being shown on the checkout payment page?

- A. Override the front end template and modify the way the embedded payment page gets loaded from the payment list configuration.
- B. Remove the payment type associated with the payment page from `CO.pmts`, then rebuild and activate a new cache.
- C. Remove the value matching the page name from the `pmt.whitelist` configuration setting, then rebuild and activate a new Configuration cache
- D. Delete the Visualforce page from the code base.

Answer: C

Explanation:

This approach effectively removes the payment page from the list of allowed pages, ensuring it is not displayed during the checkout process.

NEW QUESTION # 226

.....

Passing an Salesforce Accredited B2B Commerce Developer exam on the first attempt can be stressful, but Salesforce B2B-Commerce-Developer exam questions can help manage stress and allow you to perform at your best.
