1 / 3

C_S4CPB practice materials stand the test of time and harsh market, convey their sense of proficiency with passing rate up to 98 to 100 percent. Easily being got across by exam whichever level you are, our C_S4CPB practice materials have won worldwide praise and acceptance as a result. They are 100 percent guaranteed C_S4CPB practice materials. The content of C_S4CPB practice materials are based on real exam by whittling down superfluous knowledge without delinquent mistakes rather than dropping out of reality. Being subjected to harsh tests of market, they are highly the manifestation of responsibility carrying out the tenets of customer oriented

C_S4CPB study material is suitable for all people. Whether you are a student or an office worker, whether you are a veteran or a rookie who has just entered the industry, C_S4CPB test answers will be your best choice. For office workers, C_S4CPB test dumps provide you with more flexible study time. You can download learning materials to your mobile phone and study at anytime, anywhere. And as an industry rookie, those unreadable words and expressions in professional books often make you feel mad, but C_S4CPB Study Materials will help you to solve this problem perfectly. All the language used in C_S4CPB study materials is very simple and easy to understand. With C_S4CPB test answers, you don't have to worry about that you don't understand the content of professional books. You also don't need to spend expensive tuition to go to tutoring class. C_S4CPB test dumps can help you solve all the problems in your study.

2026 C_S4CPB: SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) –Professional Vce Download

Actual4Dumps SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) (C_S4CPB) exam questions are the best because these are so realistic! It feels just like taking a real C_S4CPB exam, but without the stress! Our C_S4CPB Practice Test software is the answer if you want to score higher on your real SAP C_S4CPB certification exam and achieve your academic goals.

SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) Sample Questions (Q19-Q24):

NEW QUESTION # 19

SIMULATION

Create a Custom Launchpad Space and Page
Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the business role to your user and save. Then refresh the browser and navigate home to verify the new Launchpad Space and tiles are visible.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the newly created custom all-employee business role to your own business user, save the assignment, refresh the browser, and then verify that the new Launchpad Space and its tiles are visible on the homepage.

This is the final verification step for the all-employee role and launchpad setup.

Business Scenario Explanation

In the previous tasks, you created and configured:

a new custom business role for all employees,

the required business catalogs,

a custom launchpad space,

a custom launchpad page,

and the employee self-service tiles:

Manage My Timesheet

Concur Travel Expense

However, even if all of that is configured correctly, you still will not see the new page and tiles on your homepage until the custom role is assigned to your own business user.

This task connects the configuration to your user and verifies the final end-user result.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact business role ID.

Save the user after adding the role.

Refresh the browser after saving.

Then navigate back to Home and confirm the space/page/tiles are visible.

Required Business Role

Assign the custom all-employee role created earlier:

Business Role ID: Z_EMPLOYEES_ALL_#####

Business Role Description: All Employee Role #####

Example

If your suffix is 000013, the role is:

Z_EMPLOYEES_ALL_000013

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to assign business roles to users.

The launchpad space and tiles will only become visible after the custom role is assigned to your own user.

Step 2: Search for your own business user

In Maintain Business Users:

Enter your own user name or business user ID in the search field.

Click Go.

Explanation:

You must assign the role to your own user because you are the one who will verify the launchpad result on the homepage.

Step 3: Open your user record

From the search results:

Click your user entry.

Open the user details page.

Explanation:

This opens the maintenance page where assigned business roles can be reviewed and changed.

Step 4: Switch to Edit mode

On the business user page:

Click Edit

Explanation:

Without edit mode, the role assignment list is display-only.

Step 5: Open the "Assigned Business Roles" tab

Inside the user record:

Click:

Assigned Business Roles

Explanation:

This tab contains the list of all business roles currently assigned to your user and is the correct place to add the all-employee role.

Step 6: Click Add

In the Assigned Business Roles section:

Click Add

This opens the popup:

Add Business Roles

Explanation:

This popup allows you to search for and assign the custom all-employee role.

Step 7: Search for the custom all-employee role

In the Add Business Roles popup:

In the business role search field, enter:

Z_EMPLOYEES_ALL_#####

Click Go

Select the role:

Z_EMPLOYEES_ALL_#####

All Employee Role #####

Example

If your suffix is 000013, search for:

Z_EMPLOYEES_ALL_000013

Explanation:

This is the custom role created in the earlier launchpad/employee-role tasks.

It contains the launchpad space, catalogs, and page content that must now become visible to your user.

Step 8: Add the role

After selecting the role:

Click OK or Apply

Explanation:

This adds the role to your user in draft mode.

Step 9: Save the business user

Back on the business user page:

Click Save

Explanation:

This is a mandatory step.

Without saving, the role assignment is not finalized, and the new launchpad content will not appear for your user.

Step 10: Confirm the role assignment

After saving, verify that your assigned roles list includes:

Z_EMPLOYEES_ALL_#####

All Employee Role #####

Explanation:

This confirms that the role is now officially assigned to your user.

Step 11: Refresh the browser

After saving:

Refresh the browser completely

Explanation:

SAP launchpad content is often cached in the current session.

A browser refresh ensures the newly assigned role content is loaded.

Step 12: Navigate back to Home

After refreshing:

Return to Home

Explanation:

The role's launchpad space and page must be verified from the end-user homepage, not only from configuration apps.

Step 13: Open the page / launchpad tab

On the homepage, look for the custom page/tab that contains the employee content.

In your run, the visible page was:

General

Explanation:

The launchpad page created earlier was titled General, so that is the page you should open to verify the result.

Step 14: Verify the section title

On the page, confirm that you can see the section:

Self-Services

Explanation:

This was the section title created in the earlier page-content maintenance task.

Step 15: Verify the tiles

Under the Self-Services section, confirm that both tiles are visible:

Concur Travel Expense

Manage My Timesheet

Explanation:

These are the two required employee self-service tiles added to the page in the previous task.

Seeing both of them confirms that:

the catalogs were assigned correctly,

the launchpad page was maintained correctly,

the business role was assigned correctly,

and the browser refresh loaded the new content successfully.

Expected Result

After completing this task successfully:

your own user has the custom business role assigned,

the role is saved successfully,

after browser refresh the launchpad updates,

the homepage shows the new launchpad page,

the Self-Services section is visible,

and the tiles Concur Travel Expense and Manage My Timesheet are visible.

NEW QUESTION # 20

SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication User with the information listed below and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new Communication User for the integration scenario Bank Integration with File Interface (1EG).

This communication user will later be used in the integration setup, especially when defining the communication system and communication arrangement.

Business Scenario Explanation

In this scenario, you are setting up the integration for:

Bank Integration with File Interface (1EG)

In SAP S/4HANA Cloud, technical communication between systems is usually handled through:

a Communication User

a Communication System

a Communication Arrangement

This task is the first step in that chain.

The communication user acts as the technical user that the system uses for integration-related authentication.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

Do not change spaces, underscores, or capitalization.

The password should not be typed manually if the task says:

Have the system propose a password

Required Values

Use the following values exactly as shown in the task image.

Example

If your suffix is 000013, then the values become:

User Name = 1EG_COMM_USER_000013

Description = 1EG Communication User

Step 1: Open the app "Communication Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Users

or

Maintain Communication Users

Open the app.

Explanation:

This app is used to create and maintain technical communication users for integration scenarios.

This is the correct starting point because the task explicitly says to create a Communication User.

Step 2: Start creating a new communication user

Inside the Communication Users app:

Click:

New

Explanation:

This starts the creation of a new communication user record.

Step 3: Enter the User Name

In the new communication user screen, enter:

User Name = 1EG_COMM_USER_#####

Example

If your suffix is 000013, enter:

1EG_COMM_USER_000013

Explanation:

This is the technical identifier for the communication user.

It must match the task exactly.

Step 4: Enter the Description

In the Description field, enter exactly:

1EG Communication User

Explanation:

This is the functional description of the technical integration user.

It should be entered exactly as written in the task to avoid validation issues.

Step 5: Let the system propose the password

In the password section:

Do not manually type a password.

Click:

Propose Password

Explanation:

The task explicitly says:

Password = Have the system propose a password

So the correct action is to use the SAP-generated password instead of entering your own value manually.

Step 6: Review the generated password

After clicking Propose Password:

The system generates a password automatically.

If the system displays the password, note it down if needed for later integration steps.

Explanation:

In some cases, the proposed password may later be needed during communication setup or documentation.

Even if not needed later in the simulation, this confirms the correct procedure was followed.

Step 7: Save the Communication User

Click:

Save

Explanation:

This finalizes the creation of the communication user.

Without saving, the technical user will not exist and the later integration steps will fail.

Step 8: Verify the Communication User

After saving, confirm that the communication user exists in the list and displays the correct values:

User Name = 1EG_COMM_USER_#####

Description = 1EG Communication User

Explanation:

This confirms the task is complete and the user is ready to be used in the next integration setup tasks.

Expected Result

After this task is completed successfully:

the communication user exists,

the user name matches the required naming convention,

the description is correct,

the password was proposed by the system,

the user is saved successfully.

□

NEW QUESTION # 21

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a Launchpad Space and Page with the information below.

□

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

□

NEW QUESTION # 22

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a new migration project with the information listed below.

□

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new migration project for the bank data migration scenario in SAP S/4HANA Cloud Public Edition.

The migration method for this scenario is:

Migrate Data Using Staging Tables

The migration project must be created with the exact values provided in the task.

Business Scenario Explanation

In this scenario, you are responsible for migrating bank master data into SAP S/4HANA Cloud Public Edition.

Because only a few banks need to be loaded, the selected migration approach is:

Migrate Data Using Staging Tables

Before any files can be uploaded or any bank data can be validated and migrated, a migration project must first be created. This project acts as the main container for:

the migration object,

the staging-table upload,

validation,

mapping,
transfer to staging tables,
and the final migration execution.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

The migration project must be created using:

Migrate Data Using Staging Tables

The migration object must be:

Bank

Save or create the project only after confirming the values are correct.

Required Values

Use the following values exactly as shown in the task image.

Parameter

Data

Name

Bank Data #####

Migration object

Bank

Example

If your suffix is 000013, then the values become:

Name = Bank Data 000013

Migration object = Bank

Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit used to create migration projects and load master data and transactional data into the system.

Because the task asks you to create a new migration project, this is the correct starting point.

Step 2: Start creating a new migration project

Inside the migration app:

Click:

Create

When the dropdown appears, select:

Migrate Data Using Staging Tables

Explanation:

This is very important because the business scenario explicitly says that the chosen migration method is Migrate Data Using Staging Tables.

Do not choose:

Migrate Data Directly from SAP System

That would be the wrong migration approach for this task.

Step 3: Enter the migration project name

In the project creation screen, enter:

Name = Bank Data #####

Example

If your suffix is 000013, enter:

Bank Data 000013

Explanation:

This is the name of the migration project and must exactly match the task requirement.

Step 4: Keep the staging-table migration approach

On the project creation screen, confirm the migration approach is:

Migrate Data Using Staging Tables

Explanation:

This ensures the migration project is created with the correct loading approach for later CSV/staging-table processing.

Step 5: Keep the local database connection

When the system asks for database connection, leave the default:

Local SAP S/4HANA Database Schema

Explanation:

In your execution, the local schema was used for the migration project.

This is the expected option for the training scenario.

Step 6: Continue to Migration Objects

Click:

Step 2

or continue to the second step of project creation.

Explanation:

This moves from the general project header information to the migration object selection.

Step 7: Search for the migration object

In the Migration Objects section:

Search for:

Bank

Explanation:

The task explicitly requires the migration object:

Bank

So only that object should be selected.

Step 8: Select the migration object "Bank"

When the object appears:

Select:

Bank

Make sure it appears in the Selected Migration Objects area.

Explanation:

This step links the project specifically to the Bank migration object.

Without selecting the migration object, the migration project would be incomplete.

Step 9: Create the migration project

After confirming:

project name,

migration approach,

database connection,

migration object = Bank,

click:

Create

or the final confirmation button provided by the system

Explanation:

This finalizes the creation of the migration project.

Step 10: Verify the created migration project

After creation, verify that the new project shows:

Project Name = Bank Data #####

Migration Object = Bank

Explanation:

This confirms that the project has been created successfully and is ready for template download, CSV preparation, validation, staging-table transfer, and migration execution.

Expected Result

After this task is completed successfully:

a new migration project exists,

the project name matches the required naming pattern,

the migration approach is staging tables,

the migration object is Bank,

the project is ready for the next migration steps.

NEW QUESTION # 23

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best

method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Check the documentation for the Bank migration object and assign the additional business role required to ensure you can migrate bank data into the system.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to check the Bank migration object documentation and assign the additional business role needed so you can successfully migrate bank data into SAP S/4HANA Cloud Public Edition.

The additional business role required is:

Business Role Template: SAP_BR_MD_SPECIALIST_BNK

Business Role Description: Master Data Specialist - Bank Data

SAP documents that the app Manage Banks - Master Data is assigned to the business role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK) in business catalog Bank - Maintenance (SAP_CA_BC_BNK_PC). That is the role needed for bank master data maintenance and is the missing authorization when the migration cockpit can load data but cannot create banks in the target system.

Business Scenario Explanation

In the previous migration steps, you already assigned the role:

Configuration Expert - Data Migration

BR_CONFIG_EXPERT_DATA_MIG

That role gives access to the migration cockpit itself, meaning you can:

create migration projects,

select migration objects,

upload CSV files,

validate data,

transfer data to staging tables,

and execute migration runs.

However, for the Bank migration object, SAP also requires the authorization to create bank master data in the target system. If that authorization is missing, the migration can still reach the execution stage, but then fail with an authorization message such as:

You are not authorized to create bank data for country/region US

That is why the additional role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK) must be assigned.

Important Notes

Always replace ##### with the last 6 digits of your group number in later migration steps.

The role to add here is in addition to the migration cockpit role.

Save the user after assigning the role.

Refresh the session after assignment so the new authorization is loaded.

Required Additional Role

Step 1: Review the migration object documentation

Open the Bank migration object in the migration project and review the documentation or role requirement note.

Explanation:

The task explicitly asks you to check the documentation for the Bank migration object and assign the additional role required for migration. SAP's official documentation for bank maintenance shows that bank master maintenance is tied to the role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK).

Step 2: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to assign business roles to your user.

Step 3: Search for your own user

In Maintain Business Users:

Enter your own user ID in the search field.

Click Go.

Explanation:

You must assign the additional role to your own user because you are the one executing the migration.

Step 4: Open your user record

From the search results:

Click your user entry.

Open the business user detail page.

Explanation:

This opens the maintenance screen where assigned business roles can be changed.

Step 5: Switch to Edit mode

On the user detail page:

Click Edit

Explanation:

Edit mode is required before the assigned business roles list can be updated.

Step 6: Open the "Assigned Business Roles" tab

Inside the business user record:

Click:

Assigned Business Roles

Explanation:

This is where you assign the additional bank master data role.

Step 7: Click Add

In the assigned business roles section:

Click Add

This opens the popup:

Add Business Roles

Explanation:

This popup is used to search for standard SAP business roles.

Step 8: Search for the additional bank role

In the Add Business Roles popup, search for either:

SAP_BR_MD_SPECIALIST_BNK

or

Master Data Specialist - Bank Data

Then select the matching role.

Explanation:

SAP documents that the app Manage Banks - Master Data belongs to the role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK). That is the role needed for bank creation/maintenance authorization.

Step 9: Add the role

After selecting the role:

Click OK or Apply

Explanation:

This adds the role to your user in draft mode.

Step 10: Save the business user

Back on the business user page:

Click Save

Explanation:

This finalizes the new role assignment.

Step 11: Confirm both migration-related roles are assigned

After saving, verify that your user now has both:

BR_CONFIG_EXPERT_DATA_MIG

SAP_BR_MD_SPECIALIST_BNK

Explanation:

These two roles cover different parts of the scenario:

BR_CONFIG_EXPERT_DATA_MIG → migration cockpit access

SAP_BR_MD_SPECIALIST_BNK → bank master data creation/maintenance authorization

Step 12: Refresh your session

After saving:

Refresh the browser completely, or

Sign out and sign in again

Explanation:

SAP role assignments may not become active in the current session immediately. A refresh or new login ensures the authorization is reloaded.

Step 13: Return to the migration project

Go back to:

Migrate Your Data

open your project:

Bank Data #####

open migration object:

Bank

Explanation:

Now that the additional bank role is assigned, the system should allow you to migrate bank master data successfully.

Expected Result

After this task is completed successfully:

your user still has the migration role BR_CONFIG_EXPERT_DATA_MIG,

your user also has the additional bank role SAP_BR_MD_SPECIALIST_BNK,

the authorization error for creating bank data should no longer occur,

the Bank migration can proceed successfully.

Screenshots for This Task

Screenshot 1: Assigned Business Roles list including the migration role Use the screenshot from your run where the business user already shows:

Configuration Expert - Data Migration

This screenshot can be used to explain the starting point before the additional role is assigned.

What this screenshot proves

It shows that the migration role alone was not enough for the bank creation authorization.

Screenshot 2: Migration error message

Use the screenshot from your run that shows the message:

You are not authorized to create bank data for country/region US

This is the key evidence that an additional bank master data role was required.

What this screenshot proves

It proves the migration cockpit role was present, but bank maintenance authorization was still missing.

Official SAP Documentation Basis

SAP's official documentation states that the Manage Banks - Master Data app is assigned to:

Master Data Specialist - Bank Data

SAP_BR_MD_SPECIALIST_BNK

within catalog:

Bank - Maintenance

SAP_CA_BC_BNK_PC

This is the basis for the additional role assignment required in this task.

NEW QUESTION # 24
