### 問題 #43

A technical architect is provided with the logic and Opportunity file shown below:

The opportunity status logic is as follows:

For the opportunity stages "Interest", "Confirmed Interest" and "Registered", the status should be "Open".

For the opportunity stage "Closed", the opportunity status should be closed Otherwise, return null for the opportunity status

Given the above file and logic and assuming that the file is mapped in a GENERIC data stream type with the following mapping:

"Day" - Standard "Day" field

"Opportunity Key" > Main Generic Entity Key

"Opportunity Stage" - Main Generic Entity Attribute

"Opportunity Count" - Generic Custom Metric

A pivot table was created to present the count of opportunities in each stage. The pivot table is filtered on Jan 11th. What is the number of opportunities in the Interest stage?

- A. 0
- **B. 1**
- C. 2
- D. 3

答案: **B**

解題說明:

Since the pivot table is filtered on January 11th and the provided Opportunity file does not show any records dated January 11th, there are zero opportunities in the Interest stage for that date. Salesforce Marketing Cloud Intelligence allows users to create pivot tables and filter data based on specific criteria, such as dates. In this case, the filter would exclude all rows that do not match the specified date, resulting in a count of zero for the Interest stage. This would apply to any stage since there are no records for January 11th. Reference can be made to Salesforce Marketing Cloud Intelligence documentation on filtering and pivot tables.

### 問題 #44

The following file was uploaded into Marketing Cloud Intelligence as a Generic Data Stream type:

The mapping is as follows:

Day - Day

web\_site\_key -> Main Generic Entity Key

web\_site\_name -> Main Generic Entity Name

Web\_site\_source -> Main Generic Entity Attribute 01

Page Views - Generic Metric 1

How many rows will be stored in Marketing Cloud Intelligence after the above file is ingested?

- A. 0
- B. 1
- C. 2
- **D. 3**

答案: **D**

解題說明:

With the uploaded file mapped as a Generic Data Stream type, the unique identifier for a row is the combination of 'Day', 'web\_site\_key', 'web\_site\_name', and 'Web\_site\_source'. As 'Day' is mapped to 'Day', 'web\_site\_key' to 'Main Generic Entity Key', 'web\_site\_name' to 'Main Generic Entity Name', and 'Web\_site\_source' to 'Main Generic Entity Attribute 01', each unique combination of these fields will constitute a separate row.

The provided file has 4 unique combinations of 'Day', 'web\_site\_key', 'web\_site\_name', and 'Web\_site\_source', as each line has a unique 'web\_site\_key' and 'web\_site\_name'. Consequently, Marketing Cloud Intelligence will store 4 rows, one for each unique combination.

### 問題 #45

A client provides the following two data streams:

Data Stream 1:

The client would like to use a VLOOKUP formula to calculate the Cost per Campaign Advertiser on January 1st 2020. Which mapping options should the client apply to obtain the expected result?

- A.
- B.
- C.
- D.

答案： D

解題說明：

To calculate Cost per Campaign Advertiser using a VLOOKUP formula, the client needs to look up the 'Cost' from Data Stream 2 based on a matching 'Media Buy Name' in Data Stream 1. Option A shows that 'Media Buy Name' is the lookup value, which is correct. The 'Campaign Advertiser' is then linked to the 'Cost' from Data Stream 2 through the VLOOKUP formula applied to the 'Media Buy Custom Attribute 01' in Data Stream 2. This setup will correctly associate the cost with the campaign advertiser.

#### 問題 #46

A technical architect is provided with the logic and Opportunity file shown below:

The opportunity status logic is as follows:

For the opportunity stages "Interest", "Confirmed Interest" and "Registered", the status should be "Open".

For the opportunity stage "Closed", the opportunity status should be closed. Otherwise, return null for the opportunity status.

Given the above file and logic and assuming that the file is mapped in a GENERIC data stream type with the following mapping "Day" - Standard "Day" field

"Opportunity Key" > Main Generic Entity Key

"Opportunity Stage" - Main Generic Entity Attribute

"Opportunity Count" - Generic Custom Metric

A pivot table was created to present the count of opportunities in each stage. The pivot table is filtered on Jan 11th. What is the number of opportunities in the Confirmed Interest stage?

- A. 0
- B. 1
- C. 2
- D. 3

答案： B

解題說明：

Based on the data provided and the date filter set to January 11th, there are no records for 'Confirmed Interest' on that specific date in the Opportunity file. Thus, the number of opportunities in the 'Confirmed Interest' stage for January 11th would be zero (0). In Salesforce Marketing Cloud Intelligence, when creating pivot tables, the data is aggregated based on the selected filters. If no records meet the filter criteria, the result for that category would be zero. The answer is supported by best practices in data analysis and reporting within Salesforce Marketing Cloud Intelligence, where date filters are applied to segment and analyze data.

#### 問題 #47

Client has provided sample files of their data from the following data sources:

Google Campaign Manager

Below are the requirements from the client and additional information:

\* The sources are linked to each other by shared Media Buy names.

\* In addition-to the mutual Media Buys, the sources contain campaign and site values. However, the client would like to see the campaign/site values coming from Google CM and not from Google DV360.

\* The source of truth for cost is Google DV360.

As a first step, a Parent-Child relationship was created between the two files, and the following mapping was performed, within both data streams:

Please note:

\* All other measurements were mapped as well to the appropriate fields.

\* No other mapping manipulations or formulas were implemented.

How many records will the merged table hold?

- A. 0
- B. 1
- **C. 2**
- D. Depends on the Data Updates Permissions

答案： C

解題說明：

Since the data sources are linked by shared Media Buy names and all other measurements are mapped to appropriate fields without additional manipulations, each unique Media Buy Name from Google DV360 will pair with its corresponding Media Buy Name in Google Campaign Manager. The number of records in the merged table will equal the number of unique Media Buy Names in Google DV360, provided there is a matching name in Google Campaign Manager. The sample shows 4 unique Media Buy Names in Google DV360, thus resulting in 4 records.
