New Identity-and-Access-Management-Architect Reliable Real Test Free PDF | Reliable Reliable Identity-and-Access-Management-Architect Exam Tips: Salesforce Certified Identity and Access Management Architect

We have made classification to those faced with various difficulties, aiming at which we adopt corresponding methods to deal with. According to the statistics shown in the feedback chart, the general pass rate for latest Identity-and-Access-Management-Architect test prep is 98%, which is far beyond that of others in this field. In recent years, our Identity-and-Access-Management-Architect Exam Guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the Identity-and-Access-Management-Architect exam.

Salesforce Certified Identity and Access Management Architect certification exam covers a wide range of topics, including user authentication, authorization, identity management, access control, and data security. Candidates who pass this certification exam demonstrate their ability to design and implement secure solutions that meet the requirements of their organization.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q160-Q165):

NEW QUESTION # 160

Universal Containers (UC) uses an internal company portal for their employees to collaborate. UC decides to use Salesforce ideas and provide the ability for employees to post ideas from the company portal. They use SAML-BASED SSO to get into the company portal and would like to leverage it to access Salesforce. Most of the users don't exist in Salesforce and they would like the user records created in Salesforce communities the first time they try to access Salesforce. What recommendation should an architect make to meet this requirement?

- A. Use on-the-fly provisioning
- B. Use Salesforce APIs to create users on the fly
- **C. Use just-in-time provisioning**
- D. Use Identity Connect to sync users

Answer: C

NEW QUESTION # 161

Northern Trail Outfitters (NTO) uses the Customer 360 Platform implemented on Salesforce Experience Cloud. The development team in charge has learned of a contactless user feature, which can reduce the overhead of managing customers and partners by creating users without contact information.

What is the potential impact to the architecture if NTO decides to implement this feature?

- A. Passwordless authentication cannot be supported because the mobile phone receiving one-time password (OTP) needs to match the number on the contact record.
- B. Custom registration handler is needed to correctly assign External Identity or Community license for the newly registered contactless user.
- C. Contactless user feature is available only with the External Identity license, which can restrict the Experience Cloud functionality available to the user.
- **D. If contactless user is upgraded to Community license, the contact record is automatically created and linked to the user record, but not associated with an Account.**

Answer: D

Explanation:

Explanation

According to the Salesforce documentation³, contactless user feature allows creating users without contact information, such as email address or phone number. This reduces the overhead of managing customers and partners who don't need or want to provide their contact information. However, if a contactless user is upgraded to a Community license, a contact record is automatically created and linked to the user record, but not associated with an account. This can impact the architecture of NTO's Customer 360 Platform, as they may need to associate contacts with accounts for reporting or other purposes.

NEW QUESTION # 162

Universal Containers is creating a mobile application that will be secured by Salesforce Identity using the OAuth 2.0 user-agent flow (this flow uses the OAuth 2.0 implicit grant type).

Which three OAuth concepts apply to this flow?

Choose 3 answers

- **A. Refresh Token**
- **B. Scopes**
- C. Verification Code
- D. Authorization Code
- **E. Client ID**

Answer: A,B,E

NEW QUESTION # 163

Universal Containers (UC) uses Global Shipping (GS) as one of their shipping vendors. Regional leads of GS need access to UC's Salesforce instance for reporting damage of goods using Cases. The regional leads also need access to dashboards to keep track of regional shipping KPIs. UC internally uses a third-party cloud analytics tool for capacity planning and UC decided to provide access to this tool to a subset of GS employees.

In addition to regional leads, the GS capacity planning team would benefit from access to this tool. To access the analytics tool, UC IT has set up Salesforce as the Identity provider for Internal users and would like to follow the same approach for the GS users as well. What are the most appropriate license types for GS Regional Leads and the GS Capacity Planners? Choose 2 Answers

- A. Customer Community Plus license for GS Regional Leads and External Identity for GS Capacity Planners.
- B. Customer Community Plus license for GS Regional Leads and Customer Community license for GS Capacity Planners.
- C. Identity License for GS Regional Leads and External Identity license for GS capacity Planners.
- D. Customer Community license for GS Regional Leads and Identity license for GS Capacity Planners.

Answer: A,D

Explanation:

The most appropriate license types for GS regional leads and the GS capacity planners are:

* Customer Community Plus license for GS regional leads. This license type allows external users, such as customers or partners, to access standard Salesforce objects, such as cases and dashboards, and custom objects in a community. This license type also supports role hierarchy, sharing rules, and reports. This license type is suitable for GS regional leads who need to report damage of goods using cases and access dashboards to track regional shipping KPIs.

* External Identity license for GS capacity planners. This license type allows external users to access a limited set of standard Salesforce objects, such as contacts and documents, and custom objects in a community. This license type also supports identity features, such as single sign-on (SSO) and social sign-on. This license type is suitable for GS capacity planners who need to access the third-party cloud analytics tool using Salesforce as the identity provider.

The other options are not appropriate license types for this scenario. Customer Community license for GS capacity planners would not allow them to access the third-party cloud analytics tool using SSO, as this license type does not support identity features.

Identity license for GS regional leads would not allow them to access cases and dashboards in the community, as this license type does not support standard Salesforce objects. NEW QUESTION # 164

A web service is developed that allows secure access to customer order status on the Salesforce Platform. The service connects to Salesforce through a connected app with the web server flow. The following are the required actions for the authorization flow:

1. User Authenticates and Authorizes Access
2. Request an Access Token
3. Salesforce Grants an Access Token
4. Request an Authorization Code
5. Salesforce Grants Authorization Code

What is the correct sequence for the authorization flow?

- A. 2, 1, 3, 4, 5
- B. 1, 4, 5, 2, 3
- C. 4,5,2, 3, 1
- D. 4, 1, 5, 2, 3

Answer: D

Explanation:

Explanation

The web server flow is an OAuth 2.0 authorization code grant type, which follows this sequence of steps:

The client app requests an authorization code from Salesforce by redirecting the user to the authorization endpoint.

The user authenticates and authorizes access to the client app.

Salesforce grants an authorization code and redirects the user back to the client app.

The client app requests an access token from Salesforce by sending the authorization code to the token endpoint.

Salesforce grants an access token and a refresh token to the client app.
