## CLT퍼펙트 인증덤프자료 & CLT시험패스 인증덤프문제

MSSC CLT 시험을 보시는 분이 점점 많아지고 있는데 하루빨리 다른 분들보다 MSSC CLT시험을 패스하여 자격증을 취득하는 편이 좋지 않을까요? 자격증이 보편화되면 자격증의 가치도 그만큼 떨어지니깐요. MSSC CLT덤프는 이미 많은분들의 시험패스로 검증된 믿을만한 최고의 시험자료입니다.

### 최신 Certified Logistics Technician CLT 무료샘플문제 (Q25-Q30):

질문 # 25

Order picking processing ends

- A. upon receipt at the warehouse
- B. when the customer receives the order
- C. when directed by the supervisor
- D. when the seller receives an order

**정답: B**

**설명:**

The CLT defines the end of the order processing cycle as the point when the customer physically receives the order and confirms its condition and accuracy. This closure validates the entire order management system—from entry and picking to packing and shipping. Only at this point is the logistics transaction complete and eligible for final invoicing or proof-of-delivery confirmation. Steps before that (such as internal authorization or shipment departure) represent intermediate stages. By setting this definitive endpoint, CLT reinforces a customer-centric perspective, emphasizing that logistics effectiveness is measured by successful, on-time, accurate delivery to the customer—not merely by internal completion metrics.

**질문 # 26**

Which of the following is NOT the purpose of JIT?

- A. produce only the exact number of units needed at a specific time
- B. respond quickly to changes in demand
- C. minimize inventory
- D. easily place inventory into stock

**정답: D**

**설명:**

JIT is designed to synchronize production with demand, reduce WIP and finished-goods inventory, and eliminate non-value-added activities. Its aims include quick response, minimal buffers, and producing to actual need. "Easily place inventory into stock" implies building inventory and storing it—a practice JIT explicitly seeks to avoid.

**질문 # 27**

Secure areas under U.S. Customs and Border Protection (CBP) supervision that are generally considered outside CBP territory upon activation are

- A. Foreign Trade Zones (FTZ)
- B. Free and Secure Trade (FAST)
- C. Container Security Initiative (CSI)
- D. North American Free Trade Agreement (NAFTA)

**정답: A**

**설명:**

Foreign Trade Zones (FTZs) are secured, designated areas within the United States that are treated, for customs purposes, as outside U.S. territory. According to CLT 4.0, goods entering an FTZ can be stored, assembled, or processed without immediate payment of customs duties. Duties are assessed only when goods leave the zone for domestic consumption, reducing cash-flow and tariff burdens. FTZs support international logistics efficiency by encouraging domestic manufacturing and re-exporting activities. CLT emphasizes FTZ operations as part of global trade compliance and customs procedures, distinguishing them from programs like FAST (a trusted shipper initiative) or CSI (a port security initiative).

**질문 # 28**

Documentation is an important part of shipping operations. Which of the following documents lists items in a vehicle's cargo and includes customer addresses, invoice numbers, and package weights to ensure the right packages end up on the correct trailer?

- A. Shipping Manifest
- B. Dispatch List
- C. Carrier Freight Bill
- D. Shipping Order

정답: A

설명:

A shipping manifest details each shipment loaded on a vehicle, including customer addresses, invoice numbers, and package weights. In CLT, this document is critical for verifying that all outbound freight is loaded accurately and routed to the correct destinations. Dispatch and tracking personnel use manifests to cross-check load integrity, prevent misroutes, and document carrier accountability. It's distinct from a bill of lading (which serves as a legal contract) and from a freight bill (a payment document). The manifest streamlines shipment tracking by aligning warehouse, transportation, and customer data, supporting both compliance and efficiency in logistics operations.

질문 # 29

Aggregate Inventory Management involves managing the inventory

- A. at the level of the entire inventory of a warehouse or distribution center
- B. according to quarterly sales
- C. at the individual item level
- D. according to the capacity of the available storage space

정답: A

설명:

Aggregate Inventory Management refers to controlling inventory at the macro level across a facility or network, rather than by individual item. CLT "Inventory Control" defines it as establishing overall inventory objectives, determining total value or volume levels, and balancing customer service with carrying cost. This high-level management informs decisions about replenishment frequency, safety stock, and investment limits. In contrast, individual item control-often handled through systems like ABC analysis or cycle counting-focuses on micro management. Aggregate management supports strategic planning, budgeting, and forecasting for the entire operation. CLT emphasizes that effective aggregate control maintains inventory optimization, reduces overstock, and ensures alignment between supply, demand, and organizational goals.
