Interactive Professional-Data-Engineer Practice Exam | Professional-Data-Engineer Valid Braindumps Sheet

We are aware that taking the Google Professional-Data-Engineer certification exam may be quite expensive. To save you money, we provide you with up to 1 year of free Professional-Data-Engineer exam questions updates. Moreover, you can check out the features of our GuideTorrent's Professional-Data-Engineer practice exam material by downloading a free demo. We provide you with a Free Professional-Data-Engineer Exam Questions demo to assist you in making a decision that is well-informed. We are sure that by preparing with updated our Google Professional-Data-Engineer exam questions you can get success and save both time and money.

Google Certified Professional Data Engineer Exam Sample Questions (Q263-Q268):

NEW QUESTION # 263

Dataprocs contain many configuration files. To update these files, you will need to use the --properties option. The format for the option is: file_prefix:property=_____.

- A. value
- B. null
- C. details
- D. id

Answer: A

Explanation:

To make updating files and properties easy, the `--properties` command uses a special format to specify the configuration file and the property and value within the file that should be updated. The formatting is as follows: `file_prefix:property=value`.

Reference: <https://cloud.google.com/dataproc/docs/concepts/cluster-properties#formatting>

NEW QUESTION # 264

A TensorFlow machine learning model on Compute Engine virtual machines (n2-standard-32) takes two days to complete training. The model has custom TensorFlow operations that must run partially on a CPU. You want to reduce the training time in a cost-effective manner. What should you do?

- A. Train the model using a VM with a GPU hardware accelerator
- B. Change the VM type to e2 standard-32
- C. Train the model using a VM with a TPU hardware accelerator
- D. Change the VM type to n2-highmem-32

Answer: A

NEW QUESTION # 265

You are migrating an application that tracks library books and information about each book, such as author or year published, from an on-premises data warehouse to BigQuery. In your current relational database, the author information is kept in a separate table and joined to the book information on a common key. Based on Google's recommended practice for schema design, how would you structure the data to ensure optimal speed of queries about the author of each book that has been borrowed?

- A. Keep the schema the same, maintain the different tables for the book and each of the attributes, and query as you are doing today
- B. Create a table that is wide and includes a column for each attribute, including the author's first name, last name, date of birth, etc
- C. Keep the schema the same, create a view that joins all of the tables, and always query the view
- D. Create a table that includes information about the books and authors, but nest the author fields inside the author column

Answer: D

NEW QUESTION # 266

You need to compose visualization for operations teams with the following requirements:

Telemetry must include data from all 50,000 installations for the most recent 6 weeks (sampling once every minute). The report must not be more than 3 hours delayed from live data.

The actionable report should only show suboptimal links.

Most suboptimal links should be sorted to the top.

Suboptimal links can be grouped and filtered by regional geography.

User response time to load the report must be <5 seconds.

You create a data source to store the last 6 weeks of data, and create visualizations that allow viewers to see multiple date ranges, distinct geographic regions, and unique installation types. You always show the latest data without any changes to your visualizations. You want to avoid creating and updating new visualizations each month. What should you do?

- A. Look through the current data and compose a small set of generalized charts and tables bound to criteria filters that allow value selection.
- B. Look through the current data and compose a series of charts and tables, one for each possible combination of criteria.
- C. Export the data to a spreadsheet, compose a series of charts and tables, one for each possible combination of criteria, and spread them across multiple tabs.
- D. Load the data into relational database tables, write a Google App Engine application that queries all rows, summarizes the data across each criteria, and then renders results using the Google Charts and visualization API.

Answer: A

NEW QUESTION # 267

Your company's customer and order databases are often under heavy load. This makes performing analytics against them difficult

without harming operations. The databases are in a MySQL cluster, with nightly backups taken using mysqldump. You want to perform analytics with minimal impact on operations. What should you do?

- A. Use an ETL tool to load the data from MySQL into Google BigQuery.
- B. Add a node to the MySQL cluster and build an OLAP cube there.
- C. Connect an on-premises Apache Hadoop cluster to MySQL and perform ETL.
- D. Mount the backups to Google Cloud SQL, and then process the data using Google Cloud Dataproc.

Answer: C

NEW QUESTION # 268

.....

Printing these Professional-Data-Engineer valid questions and reading them in a handy paper format is another feature offered by GuideTorrent Google Professional-Data-Engineer PDF for test applicants who prefer more conventional reading experience. These incredible features of Google Professional-Data-Engineer PDF Questions help applicants practice for the Professional-Data-Engineer exam wherever and whenever they want, according to their timetables.
