100% Pass 2026 SCP-NPM: SolarWinds Network Performance Monitor (NPM) Exam –Professional Questions

Are you aware of the importance of the SCP-NPM certification? If your answer is not, you may place yourself at the risk of being eliminated by the labor market. Because more and more companies start to pay high attention to the ability of their workers, and the SCP-NPM Certification is the main reflection of your ability. And our SCP-NPM exam questions are the right tool to help you get the certification with the least time and efforts. Just have a try, then you will love them!

SolarWinds SCP-NPM exam is a comprehensive test that covers a wide range of topics related to network performance monitoring. SCP-NPM exam focuses on various aspects of network monitoring, including network availability, network performance, and network security. SCP-NPM Exam consists of multiple-choice questions and is designed to test the candidate's knowledge and understanding of various network monitoring tools and techniques.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q75-Q80):

NEW QUESTION # 75

A custom poller has polled some results from nodes. Which of the following is a possible reason for NOT being able to show the polled results as charts on the Orion Web Console?

- A. You did not set the poller to collect historical statistics
- B. You must use Device Studio to build the poller
- C. The poller is not enabled and assigned to the devices
- **D. Charts are only supported by out-of-the-box pollers**

Answer: D

NEW QUESTION # 76

You use NPM to monitor a set of physical servers. The server team decides to virtualize these servers using VMware. Which part of your virtual infrastructure will NPM no longer be able to monitor?

- **A. VM sprawl monitoring**
- B. Virtualization environment tree
- C. Virtualization host and VM performance metrics
- D. Virtualization host hardware health

Answer: A

Explanation:

https://support.solarwinds.com/SuccessCenter/s/article/VMAN-and-IVIM-feature-comparison?language=en_US

NEW QUESTION # 77

Half of your objects in a nested map are down, but the top level map is up. What is the cause?

- A. You set availability thresholds for devices to above 50%
- B. You set availability thresholds for devices to below 50%
- **C. You set map status thresholds to above 50%**
- D. You set map status thresholds to below 50%

Answer: C

Explanation:

Map status thresholds determine how the status of a map is calculated based on the status of its child objects. If you set the map status threshold to above 50%, it means that the map will be up if more than half of its child objects are up, regardless of the severity of the down objects. This can cause a situation where half of your objects in a nested map are down, but the top level map is up, because the top level map only considers the status of the nested maps, not the individual objects within them. To avoid this, you can lower the map status threshold to a value that reflects the desired level of availability for your network, or use custom map status thresholds to specify different values for different maps. Reference: Set map status thresholds in NPM, Create nested maps in NPM, How to map through a deeply nested array of objects?

Capacity planning is available for which metrics?

- Answer: D**

You want to limit a user to only monitor Windows servers and not be able to view other devices that NPM monitors. How can you do this?

- Answer: A**
