Exam Cisco 300-620 Learning - Latest 300-620 Exam Papers

People always tend to neglect the great power of accumulation, thus the 300-620 study material can not only benefit you in learning process but also help people achieve a good basis of understanding design. We have full confidence to ensure that you will have an enjoyable study experience with our 300-620 Study Materials, which are designed to ensure your interest and help you pass the exam more easily. You will have a better understanding after reading the following advantages:

Cisco 300-620 Exam Topics:

Topic	Weight	Objectives
ACI Management	25%	1. Implement and configure ACI in a data center 2. Troubleshoot and debug network 3. Implement configuration backup (using Ansible or other supported tools) 4. Implement AAA and FQAC 5. Configure an upgrade
Integration	15%	1. Implement VMware vCenter vMotion 2. Configure vMotion networking (as VMotion) 3. Implement service mesh (as a separate and virtualized)
ACI Packet Forwarding	15%	1. Configure endpoint learning 2. Implement bridge domain configuration *** (subject to change) 3. Implement hardware (Cisco, Juniper, HP, etc.)

Once you decide to pass the 300-620 exam and get the certification, you may encounter many handicaps that you don't know how to deal with, so, you may think that it is difficult to pass the 300-620 exam and get the certification. In order to help you solve these problem and help you pass the exam easy, we compiled such a 300-620 Exam Torrent. We can promise that you will have no regret buying our 300-620 exam dumps. Our 300-620 exam questions have a high pass rate as 99% to 100%, you will pass with it for sure.

You Have Passed It. What Is Next?

Those candidates who successfully ace 300-620 test will be given the Cisco Certified Specialist – Data Center ACI Implementation certification first. With this certificate, it is believed that you are well-skilled in the field of Cisco switches in ACI.

If you want to upgrade your portfolio and acquire more knowledge in the industry, you can take and pass 350-601 DCCOR exam as well which is a core test for the CCNP Data Center accreditation. Once these two steps are completed, the certification is yours. Finally, you can check out other concentration options under this path or go for the CCIE Data Center certificate. In this case, the candidates are recommended to have 5 to 7 years of working experience in the field and be proficient in creating, deploying, optimizing complex data center solutions as well as handling other related tasks.

To pass the Cisco 300-620 Exam, candidates must have a strong understanding of Cisco ACI architecture, policies, fabric discovery, and integration with other network components. They should also be familiar with automation and programmability concepts, including REST APIs, JSON, and Python scripting. Additionally, candidates must have hands-on experience in configuring and managing ACI environments using Cisco Application Policy Infrastructure Controller (APIC) and related tools. Successful completion of the Cisco 300-620 exam validates the candidates' skills and knowledge in ACI implementation, which can lead to better job opportunities and career growth in the field of network infrastructure.

Answers 300-620 Real Questions & 300-620 Reliable Exam Question

ValidExam is one of the leading platforms that has been helping Implementing Cisco Application Centric Infrastructure exam candidates for many years. Over this long time period we have helped 300-620 exam candidates in their preparation. They got help from ValidExam 300-620 Practice Questions and easily got success in the final Implementing Cisco Application Centric Infrastructure certification exam. You can also trust ValidExam 300-620 exam dumps and start preparation with complete peace of mind and satisfaction.

Cisco 300-620 Exam is a challenging certification test that focuses on the implementation of Cisco Application Centric Infrastructure. 300-620 exam covers a wide range of topics and requires a solid understanding of the ACI architecture and its components. Implementing Cisco Application Centric Infrastructure certification is valuable for IT professionals who are looking to enhance their career prospects in the data center networking field and provides them with a competitive edge in the job market.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which two statements regarding ACI Multi-Site are true? (Choose two.)

- A. ACI Multi-Site is a solution that allows one APIC cluster to manage multiple ACI sites.
- B. The Inter-Site network routers should run OSPF to establish peering with the spines.
- C. Routers in the Inter-Site network must run OSPF, DHCP relay, and MP-BGP.
- D. ACI Multi-Site is a solution that supports a dedicated APIC cluster per site.
- E. The Multi-Site orchestrator must be directly attached to one ACI leaf.

Answer: B,E

Explanation:

Section: ACI Anywhere

NEW QUESTION # 40

When Cisco ACI connects to an outside Layers 2 network, where does the ACI fabric flood the STP BPDU frame?

- A. within the access encap VLAN
- B. within the bridge domain
- C. within the APIC
- D. between all the spine and leaf switches

Answer: A

NEW QUESTION # 41

Refer to the exhibit. The VMs called VM1 and VM2 are deployed on the ESXi Server in a Cisco ACI environment. VM1 has MAC address A and an IP address 192.168.1.1/24, and VM2 has MAC address B. VM1 has been shut down. Which set of actions must be taken to detect the movement of IP address 192.168.1.1/24 to MAC address B?

- A. Enable ARP flooding.
Disable unicast routing.
Enable GARP-based detection.

- B. Enable ARP flooding.
Enable unicast routing.
Enable GARP-based detection.
- C. Disable ARP flooding.
Enable unicast routing.
Disable GARP-based detection.
- D. Disable ARP flooding.
Disable unicast routing.
Disable GARP-based detection.

Answer: B

Explanation:

GARP is used to update IP to MAC relation on upstream network devices. It is most relevant in case of vmotions or VMs/servers moving from one host to another, and the MAC address changes, but the IP remains the same.

In the context of ACI, the leaf switches can detect MAC and IP address movement between leaf switch ports, leaf switches, bridge domains, and EPGs, but it does not detect the movement of an IP address to a new MAC address if the new MAC address is from the same interface and same EPG as the old MAC address.

When the GARP based detection option is enabled (configuration available under the BD), Cisco ACI will trigger an endpoint move based on GARP packets if the move occurs on the same interface and same EPG. If a GARP packet comes from the same interface and same EPG, then endpoint learning is triggered only when Unicast Routing, ARP Flooding, and "GARP based detection" are all enabled for the bridge domain.

NEW QUESTION # 42

An engineer configured a bridge domain with the hardware-proxy option for Layer 2 unknown unicast traffic. Which statement is true about this configuration?

- A. The Layer 2 unknown hardware proxy lacks support of the topology change notification.
- B. The leaf switch drops the Layer 2 unknown unicast packet if it is unable to find the MAC address in the local forwarding tables.
- C. The leaf switch forwards the Layers 2 unknown unicast packets to all other leaf switches if it is unable to find the MAC address in its local forwarding tables.
- D. The spine switch drops the Layer 2 unknown unicast packet if it is unable to find the MAC address in the proxy database.

Answer: B

NEW QUESTION # 43

An engineer plans to integrate a Cisco ACI fabric with VMware vCenter DVS. Which set of actions must the engineer take to ensure a successful integration?

- A. Set a vCenter controller named ACI-VMware-Integration and select Read Write Access mode.
- B. Set a virtual switch named ACI-VMware-Integration and select Read Only Access mode.
- C. Set a vCenter controller named ACI-VMware-Integration and select Read Only Access mode.
- D. Set a virtual switch named ACI-VMware-Integration and select Read Write Access mode.

Answer: A
