## Remarkable TDA-C01 Practice Guide Grants You High-quality Exam Materials - TopExamCollection

With precious time passing away, many exam candidates are making progress with high speed and efficiency. You cannot lag behind and with our TDA-C01 practice materials, and your goals will be easier to fix. So stop idling away your precious time and begin your review with the help of our TDA-C01 practice materials as soon as possible. By using them, it will be your habitual act to learn

something with efficiency. With the cumulative effort over the past years, our TDA-C01 practice materials have made great progress with passing rate up to 98 to 100 percent among the market.

## Tableau Certified Data Analyst Sample Questions (Q92-Q97):

### NEW QUESTION # 92

You have a workbook that connects to a database. The database requires authentication.

You plan to publish the workbook and schedule a daily refresh of the data.

Which two conditions must be met to schedule the refresh? Choose two.

- A. The credentials must be embedded.
- B. The data source must be stored as a hyper file.
- C. The data source must use a live connection.
- D. The data must be extracted.

**Answer: A,D**

Explanation:

To schedule a refresh of the data, you need to ensure that Tableau Server or Tableau Online can access the database without prompting for credentials. This can be done by embedding the credentials in the workbook or the published data source. You also need to extract the data from the database and publish it as a separate data source or as part of the workbook. A live connection would not allow you to refresh the data on a schedule, as it would always query the database directly. A hyper file is a format for storing extracted data, but it is not a requirement for scheduling a refresh. References:

Tableau Certified Data Analyst Exam Prep Guide, page 10, section "Publishing and Scheduling Data Refreshes" Tableau Help: Embedding Database Credentials Tableau Help: Extract Your Data

### NEW QUESTION # 93

You have a Tableau workbook that contain three worksheets named Sheet1 Sheet2 and Sheet3.

You create several filters.

From the Data Source page you plan to add data source filters

When type of filter will appear in the Edit Data Source Filters dialog box?

- A. A top N condition filter on a dimension in Sheet 1 and Sheet2
- B. A table calculation filter used on Sheet
- C. A dimension filter on all the sheets
- D. A context filter on a dimension in Sheet3

**Answer: C**

Explanation:

A data source filter is a filter that applies to all the worksheets that use the same data source. It filters the data before any other filters or calculations are applied. You can add a data source filter from the Data Source page by clicking on the Add button next to Filters.

The type of filter that will appear in the Edit Data Source Filters dialog box is a dimension filter on all the sheets. This means that you can choose a dimension from your data source and filter it by values, range, condition, or top/bottom. The filter will affect all the worksheets that use that dimension.

The other types of filters are not data source filters and will not appear in the Edit Data Source Filters dialog box. A table calculation filter is a filter that applies to a table calculation, such as percent of total or running total. A top N condition filter is a filter that shows only the top or bottom N values of a measure or dimension based on a condition. A context filter is a filter that creates a subset of data that other filters can use.

### NEW QUESTION # 94

You want to connect a Tableau workbook to a dataset in a Microsoft Excel spreadsheet.

What should you do from Tableau Desktop?

- A. From the Data menu select New Data Source
- B. From the Data menu select Replace Data Source
- C. From the File menu select Import Workbook
- D. From the File menu select New

**Answer: A**

Explanation:

To connect a Tableau workbook to a dataset in a Microsoft Excel spreadsheet, you need to select New Data Source from the Data menu. This will open the Connect pane, where you can choose Microsoft Excel as your data source and browse for your spreadsheet file. You can then drag and drop your sheets or tables to join or union them in the data source page. References:

[https://help.tableau.com/current/pro/desktop/en-us/connect\\_basic.htm](https://help.tableau.com/current/pro/desktop/en-us/connect_basic.htm)

[https://help.tableau.com/current/pro/desktop/en-us/connect\\_excel.htm](https://help.tableau.com/current/pro/desktop/en-us/connect_excel.htm)

When connecting to a dataset in Tableau Desktop, you would go to the 'Data' menu and select 'New Data Source'. This allows you to connect to various types of data sources, including Microsoft Excel spreadsheets, where you can then select the specific file you wish to connect to.

#### **NEW QUESTION # 95**

You have a data source that contains 20 tables.

You want the tables to be organized within the Data pane based on the type of data contained within the tables.

What should you use?

- A. Hierarchies
- B. Groups
- **C. Folders**
- D. Sets

**Answer: C**

Explanation:

To organize the tables in the Data pane based on the type of data contained within the tables, you should use folders. Folders are a way to manually group fields, parameters, sets, or tables in the Data pane according to your preference. You can create folders by right-clicking on the fields or tables you want to group and selecting Folders > Create Folder. You can also drag and drop fields or tables into existing folders. You can name the folders according to the type of data they contain, such as sales, customer, product, etc. Folders can help you find and access the fields or tables you need more easily and efficiently.
