## New CLF-C02 Mock Exam, CLF-C02 Exam Lab Questions

The price of Our CLF-C02 exam questions is affordable and we provide the wonderful service before and after the sale to let you have a good understanding of our CLF-C02 study materials before your purchase and convenient download procedures in case you want to have a check on the CLF-C02 test. We have free demo on the web for you to know the content of our CLF-C02 learning guide. Once you have a try on our CLF-C02 training prep, you will know that our CLF-C02 practice engine contains the most detailed information for your CLF-C02 exam.

### Amazon AWS Certified Cloud Practitioner Sample Questions (Q369-Q374):

#### NEW QUESTION # 369

A company wants to integrate natural language processing (NLP) into business intelligence (BI) dashboards.

The company wants to ask questions and receive answers with relevant visualizations.

Which AWS service or tool will meet these requirements?

- A. Amazon Rekognition
- B. Amazon Lex
- C. Amazon Macie
- **D. Amazon QuickSight Q**

**Answer: D**

Explanation:

Amazon QuickSight Q is a natural language query feature that lets you ask questions about your data using everyday language and get answers in seconds. You can type questions such as "What are the total sales by region?" or "How did marketing campaign A perform?" and get answers in the form of relevant visualizations, such as charts or tables. You can also use Q to drill down into details, filter data, or perform calculations. Q uses machine learning to understand your data and your intent, and provides suggestions and feedback to help you refine your questions.

#### NEW QUESTION # 370

What is the recommended use case for Amazon EC2 On-Demand Instances?

- A. A workload that can be interrupted for a project that requires the lowest possible cost
- **B. An unpredictable workload that does not require a long-term commitment**
- C. A steady-state workload that requires a particular EC2 instance configuration for a long period of time
- D. A workload that is expected to run for longer than 1 year

**Answer: B**

Explanation:

Amazon EC2 On-Demand Instances are ideal for unpredictable workloads that do not require a long-term commitment. This option allows users to pay for compute capacity by the hour or second, with no long-term commitments. It is suitable for short-term, spiky, or unpredictable workloads that cannot be interrupted and require flexibility. Option A is better suited for Reserved Instances, Option B is ideal for Spot Instances, and Option D is more suited for Reserved Instances due to cost optimization for long-term use. "There is no long-term commitment required when you purchase On-Demand Instances. You pay only for the seconds that your On-Demand Instances are in the running state, with a 60-second minimum. The price per second for a running On-Demand Instance is fixed, and is listed on the Amazon EC2 Pricing, On-Demand Pricing page. We recommend that you use On-Demand Instances for applications with short-term, irregular workloads that cannot be interrupted."

<https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ec2-on-demand-instances.html>

#### NEW QUESTION # 371

A company wants to migrate its on-premises relational databases to the AWS Cloud. The company wants to use infrastructure as close to its current geographical location as possible.

Which AWS service or resource should the company use to select its Amazon RDS deployment area?

- A. AWS Wavelength
- B. Amazon Connect
- C. AWS Direct Connect

- **D. AWS Regions**

**Answer: D**

Explanation:

Explanation

AWS Regions are the AWS service or resource that the company should use to select its Amazon RDS deployment area. AWS Regions are separate geographic areas where AWS clusters its data centers. Each AWS Region consists of multiple, isolated, and physically separate Availability Zones within a geographic area. Each AWS Region is designed to be isolated from the other AWS Regions to achieve the highest possible fault tolerance and stability. AWS provides a more extensive global footprint than any other cloud provider, and to support its global footprint and ensure customers are served across the world, AWS opens new Regions rapidly. AWS maintains multiple geographic Regions, including Regions in North America, South America, Europe, China, Asia Pacific, South Africa, and the Middle East. Amazon RDS is available in several AWS Regions worldwide. To create or work with an Amazon RDS DB instance in a specific AWS Region, you must use the corresponding regional service endpoint. You can choose the AWS Region that meets your latency or legal requirements. You can also use multiple AWS Regions to design a disaster recovery solution or to distribute your read workload. ### NEW QUESTION # 372

Which AWS Support plan provides customers with access to an AWS technical account manager (TAM)?

- A. AWS Basic Support
- B. AWS Developer Support
- **C. AWS Enterprise Support**
- D. AWS Business Support

**Answer: C**

Explanation:

The correct answer is D because AWS Enterprise Support is the support plan that provides customers with access to an AWS technical account manager (TAM). AWS Enterprise Support is the highest level of support plan offered by AWS, and it provides customers with the most comprehensive and personalized support experience. An AWS TAM is a dedicated technical resource who works closely with customers to understand their business and technical needs, provide proactive guidance, and coordinate support across AWS teams. The other options are incorrect because they are not support plans that provide customers with access to an AWS TAM. AWS Basic Support is the default and free support plan that provides customers with access to online documentation, forums, and account information. AWS Developer Support is the lowest level of paid support plan that provides customers with access to technical support during business hours, general guidance, and best practice recommendations. AWS Business Support is the intermediate level of paid support plan that provides customers with access to technical support 24/7, system health checks, architectural guidance, and case management. Reference: AWS Support Plans

### NEW QUESTION # 373

Which AWS service is a continuous delivery and deployment solution?

- A. AWS CodeCommit
- **B. AWS CodePipeline**
- C. AWS Cloud9
- D. AWSAppSync

**Answer: B**

Explanation:

Explanation

AWS CodePipeline is a continuous delivery and deployment service that automates the release process of software applications across different stages, such as source code, build, test, and deploy<sup>2</sup>. AWSAppSync, AWS Cloud9, and AWS CodeCommit are other AWS services related to application development, but they do not provide continuous delivery and deployment solutions<sup>34</sup>.

### NEW QUESTION # 374

.....

You can try the free demo version of any CLF-C02 exam dumps format before buying. For your satisfaction, Prep4King gives you a free demo download facility. You can test the features and then place an order. So, these real and updated Amazon CLF-C02 Dumps are essential to pass the CLF-C02 exam on the first try.
