New CCAAK Test Topics, Latest CCAAK Test Practice

As the saying goes, an inch of gold is an inch of time. The more efficient the study guide is, the more our candidates will love and benefit from it. It is no exaggeration to say that you can successfully pass your CCAAK exams with the help our CCAAK learning torrent just for 20 to 30 hours even by your first attempt. And to cater to our customers' different study interests and hobbies, we have multiple choices on the CCAAK Exam Materials versions for you to choose: the PDF, the Software and the APP online.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which property in broker configuration specifies that a broker belongs to a particular rack?

Which property in broker configuration specifies that a broker belongs to a particular rack?

- A. zookeeper.rack
- **B. broker.rack**
- C. client.rack
- D. kafka.rack

Answer: B

Explanation:

The broker.rack property is used in a Kafka broker's configuration to specify the rack or availability zone the broker belongs to. This is important for rack-aware replica placement, allowing Kafka to distribute replicas across different racks for fault tolerance.

NEW QUESTION # 17

Your organization has a mission-critical Kafka cluster that must be highly available. A Disaster Recovery (DR) cluster has been set up using Replicator, and data is continuously being replicated from source cluster to the DR cluster. However, you notice that the message on offset 1002 on source cluster does not seem to match with offset 1002 on the destination DR cluster.

Which statement is correct?

- **A. The offsets for the messages on the source, destination cluster may not match.**
- B. The DR cluster is lagging behind updates; once the DR cluster catches up, the messages will match.
- C. The message was updated on source cluster, but the update did not flow into destination DR cluster and errored.
- D. The message on DR cluster got over-written accidentally by another application.

Answer: A

Explanation:

When using Confluent Replicator (or MirrorMaker), offsets are not preserved between the source and destination Kafka clusters. Messages are replicated based on content, but they are assigned new offsets in the DR (destination) cluster. Therefore, offset 1002 on the source and offset 1002 on the DR cluster likely refer to different messages, which is expected behavior.

NEW QUESTION # 18

By default, what do Kafka broker network connections have?

- A. Encryption, but no authentication or authorization
- **B. No encryption, no authentication and no authorization**
- C. Encryption and authentication, but no authorization
- D. No encryption, no authorization, but have authentication

Answer: B

Explanation:

By default, Kafka brokers use the PLAINTEXT protocol for network communication. This means:

- * No encryption - data is sent in plain text.
 - * No authentication - any client can connect without verifying identity.
 - * No authorization - there are no access control checks by default.
- Security features like TLS, SASL, and ACLs must be explicitly configured.

NEW QUESTION # 19

Per customer business requirements, a system's high availability is more important than message reliability.

Which of the following should be set?

- A. The linger.ms should be set to '0'.
- B. Message retention.ms should be set to -1.
- C. The number of brokers in the cluster should be always odd (3, 5, 7 and so on).
- **D. Unclean leader election should be enabled.**

Answer: D

Explanation:

Enabling unclean leader election allows Kafka to elect a non-in-sync replica as leader if all in-sync replicas are unavailable. This sacrifices message reliability (possible data loss) in favor of high availability, aligning with the requirement.

NEW QUESTION # 20

A customer has a use case for a ksqlDB persistent query. You need to make sure that duplicate messages are not processed and messages are not skipped.

Which property should you use?

- **A. processing.guarantee=exactly_once**
- B. ksql.streams auto.offset.reset=earliest
- C. ksql.streams auto.offset.reset=latest
- D. ksql.fail.on.production.error=false

Answer: A

Explanation:

processing.guarantee=exactly_once ensures that messages are processed exactly once by ksqlDB, preventing both duplicates and message loss.

NEW QUESTION # 21

.....

It is very necessary for a lot of people to attach high importance to the CCAAK exam. It is also known to us that passing the exam is not an easy thing for many people, so a good study method is very important for a lot of people, in addition, a suitable study tool is equally important, because the good and suitable CCAAK Study Materials can help people pass the exam in a relaxed state.

New CCAAK Test Topics: <https://www.testsimulate.com/CCAANK-study-materials.html>
