Are you preparing for the exam? Do you have the plan to study for the exam? Are you going to follow the current syllabus? If so, you are not on track. There are many questions that you should be asking yourself before starting your preparation. The first question should be: What do I want to achieve in this exam? Will this help me get a job or will it just give me another qualification? You should also think about the time and money that you are willing to spend on achieving this goal. If it is important, then why not use some of these resources wisely? You can get access to study material by subscribing to our website and taking advantage of our free practice tests. Before proceeding, one should also see all the essential features offered by us to get the right dumps material and that benefit as well. It includes two very easy format, one is the dumps and the other is the online practice test engine. Both have its importance.

One should have the actual questions and answers that help to get through the exam. For the comfort of the candidate, real questions and answers are provided so that one can easily learn the exam. The practice questions can be easily accessible and one can easily go through such material easily. The best part about the dumps is that one can download it easily anywhere like on a PC, laptop, or even on a smartphone device from where one can even prepare for an Exam when they are outside and away from home. To clear the Exam, one should learn the dumps but it is also very important to enhance confidence and skills. For this purpose one should use the online practice test engine in order to get success. This helps the candidate to get through the exam easily. There is learning mode as well as test mode both of which will help at the same time.

Experts had made the right dumps for the candidate in order to get success in the Exam. One can easily work hard by learning from these dumps and this won't waste time as well. The best thing is that these exam dumps help to clear all the concepts that help the candidate proceed and clear the Exam in no time. Often the syllabus of the Exam gets updated. Because of which the candidate might get in trouble. But we take the responsibility to provide with all the recent information and exam syllabus changes to those who had purchased the dumps for three months. This latest updates will help the candidate to prepare Exam as per the requirement. And with this update one can easily learn the exam.

ARDMS AE Adult Echocardiography Examination 認定 AE-Adult-Echocardiography 試験問題 (Q131-Q136):

質問 # 131

How must the sonographer angle the transducer from the apical four-chamber view in order to visualize the aortic valve in the apical five-chamber view?

- A. Posteriorly
- B. Laterally
- C. Anteriorly
- D. Medially

正解: C

解説:

To obtain the apical five-chamber view from the apical four-chamber, the transducer is angled anteriorly (towards the patient's chest). This brings the left ventricular outflow tract and aortic valve into the imaging plane anterior to the left ventricle and mitral valve seen in the four-chamber view.

Posterior, medial, or lateral angulations do not adequately visualize the aortic valve in this context.

This technique is described in adult echocardiography imaging protocols and ASE chamber quantification guidelines#12:ASE Imaging Protocolsp.30-35##16:Textbook of Clinical Echocardiography, 6ep.70-75#.

質問 # 132

Which artery is identified by the arrow on this image?

- A. Right common carotid
- B. Brachiocephalic
- C. Left subclavian
- D. Left common carotid

正解: B

解説:

The image is a suprasternal or high parasternal echocardiographic view of the aortic arch and its branches.

The arrow points to the first large branch arising from the aortic arch, which is the brachiocephalic artery (also called the innominate artery). This vessel courses superiorly and bifurcates into the right common carotid and right subclavian arteries.

The left common carotid artery is the second branch from the arch, the left subclavian artery is the third branch, and the right common carotid is a branch of the brachiocephalic artery, not directly off the arch.

This anatomic arrangement and its echocardiographic depiction are well documented in adult echocardiography references and vascular ultrasound guidelines#12:ASE Vascular Imaging Guidelinesp.270-275##16:Textbook of Clinical Echocardiography, 6ep.400-405#.

質問 # 133

Which wall is indicated by the arrow on this video?

- A. Anterolateral
- B. Inferoseptum
- C. Anteroseptum
- D. Inferolateral

正解: D

解説:

Comprehensive and Detailed Explanation From Exact Extract:

The apical two-chamber echocardiographic view displays the inferolateral wall (also called posterior lateral).

The arrow points to this inferolateral segment, which is located inferiorly and laterally in the left ventricle.

Anteroseptum and inferoseptum relate to the interventricular septum, while anterolateral is the anterior lateral wall, opposite the inferolateral wall. Correct regional wall motion assessment is essential for ischemic disease evaluation.

This identification and terminology are described in ASE stress echocardiography and chamber quantification guidelines#12:ASE Stress Echocardiography Guidelinesp.310-315##16:Textbook of Clinical Echocardiography, 6ep.380-385#.

質問 # 134

Which finding is indicated by the arrow on this image?

- A. Left pleural effusion
- B. Pericardial effusion
- C. Ascites
- **D. Hiatal hernia**

正解: D

解説:

Comprehensive and Detailed Explanation From Exact Extract:

The echocardiographic image shows a structure posterior to the left atrium, pointed to by the arrow. This is consistent with a hiatal hernia, which often appears as an echolucent or mixed echogenicity structure behind the left atrium in the parasternal or apical views. Hiatal hernias occur when part of the stomach herniates through the esophageal hiatus of the diaphragm into the thoracic cavity and may mimic pericardial or pleural effusions on echocardiography.

Pericardial effusions appear as an anechoic (dark) space surrounding the heart but usually anterior or around the entire heart rather than posterior localized structure. Left pleural effusions also appear posteriorly but typically have different echogenicity and anatomical location. Ascites refers to free fluid in the abdomen and would not appear in this thoracic echocardiographic window. Recognition of hiatal hernia on echocardiography is important to avoid misdiagnosis, as it may cause artifacts or false-positive effusions. The presence of swirling or movement of echogenic material with respiration and positional changes helps in diagnosis. This finding is described in the "Textbook of Clinical Echocardiography, 6e" (Catherine M. Otto), Chapter on Pericardial Disease and Miscellaneous Echocardiographic Findings, including differential diagnosis of echolucent areas around the heart#20:280-285Textbook of Clinical Echocardiography#.

質問 # 135

When utilizing contrast agents, what should the sonographer keep in mind?

- A. Contrast agents produce only mild reactions.
- B. The contrast-enhanced exam poses no risk to the patient.
- **C. Anaphylactoid reactions may occur.**
- D. Patients with no history of allergies will not have reactions.

正解: C

解説:

Contrast agents used in echocardiography can rarely cause anaphylactoid reactions, which are non-IgE- mediated hypersensitivity reactions that can mimic anaphylaxis. Therefore, sonographers must be prepared to manage such reactions.

Contrary to option B, reactions can be severe though rare. Even patients without prior allergies can react. It is incorrect to say the exam poses no risk; proper precautions and monitoring are essential.

These precautions are emphasized in ASE contrast echocardiography guidelines and safety protocols#12:ASE Contrast Echocardiography Guidelinesp.190-195##16:Textbook of Clinical Echocardiography, 6ep.575-580#.
