Evaluate the following CREATE TABLE command:

```
CREATE TABLE new_orders(ord_id, ord_date DEFAULT SYSDATE, cus_id)
```

AS

```
SELECT order_id, order_date, customer_id
```

```
FROM orders;
```

Which statement is true regarding the above command?

- A. The NEW_ODRDERStable would not get created because the column names in the CREATE TABLE command and the SELECT clause do not match.
- B. The NEW_ODRDERStable would not get created because the DEFAULT value cannot be specified in the column definition.
- C. The NEW_ODRDERStable would get created and all the constraints defined on the specified columns in the ORDERStable would be passed to the new table.
- **D. The NEW_ODRDERStable would get created and only the NOT NULL constraint defined on the specified columns would be passed to the new table.**

答案: D

問題 #170

The user SCOTT who is the owner of ORDERS and ORDER_ITEMS tables issues this GRANT command:

```
GRANT ALL
```

```
ON orders, order_items
```

```
TO PUBLIC;
```

What must be done to fix the statement?

- A. WITH GRANT OPTION should be added to the statement.
- B. PUBLIC should be replaced with specific usernames.
- **C. Separate GRANT statements are required for the ORDERS and ORDER_ITEMS tables.**
- D. ALL should be replaced with a list of specific privileges.

答案: C

問題 #171

View the Exhibit and examine the structure of the CUSTOMERS table.

ORACLE		
CUSTOMERS		
Name	Null?	Type
CUSTOMER_ID	NOT NULL	NUMBER(6)
CUST_NAME		VARCHAR2(20)
CUST_EMAIL		VARCHAR2(30)
INCOME_LEVEL		VARCHAR2(20)

CUSTOMER_VU is a view based on CUSTOMERS table which has the same structure as CUSTOMERS table.

CUSTOMERS need to be updated to reflect the latest information about the customers.

What is the error in the following MERGE statement?

```

MERGE INTO customers c
  USING customer_vu    cv
  ON (c.customer_id = cv.customer_id)
WHEN MATCHED THEN
  UPDATE SET
    c.customer_id = cv.customer_id,
    c.cust_name = cv.cust_name,
    c.cust_email = cv.cust_email,
    c.income_level = cv.income_level
WHEN NOT MATCHED THEN
  INSERT VALUES (cv.customer_id, cv.cust_name, cv.cust_email, cv.income_level)
  WHERE cv.income_level > 100000;

```

- A. The WHERE clause cannot be used with INSERT.
- **B. The CUSTOMER_ID column cannot be updated.**
- C. The INTO clause is misplaced in the command.
- D. CUSTOMER_VU cannot be used as a data source.

答案: B

問題 #172

You want to write a query that prompts for two column names and the WHERE condition each time it is executed in a session but only prompts for the table name the first time it is executed. The variables used in your query are never undefined in your session. Which query can be used?

- A. SELECT &col1, &col2
FROM "&table"
WHERE &condition;
- B. SELECT &col1, &col2
FROM &table
WHERE &condition = &cond;
- **C. SELECT &col1, &col2
FROM &table
WHERE &condition;**
- D. SELECT &&col1, &&col2
FROM &table
WHERE &&condition = &&cond;
- E. SELECT &&col1, &&col2
FROM &table
WHERE &&condition;

答案: C

解題說明:

The scenario requires prompting for column names and WHERE condition each time the query is executed, but only prompting for the table name once. This behavior is achievable through the use of substitution variables in SQL*Plus or SQL Developer:

* A.

```
SELECT &col1, &col2 FROM &&table WHERE &condition;
```

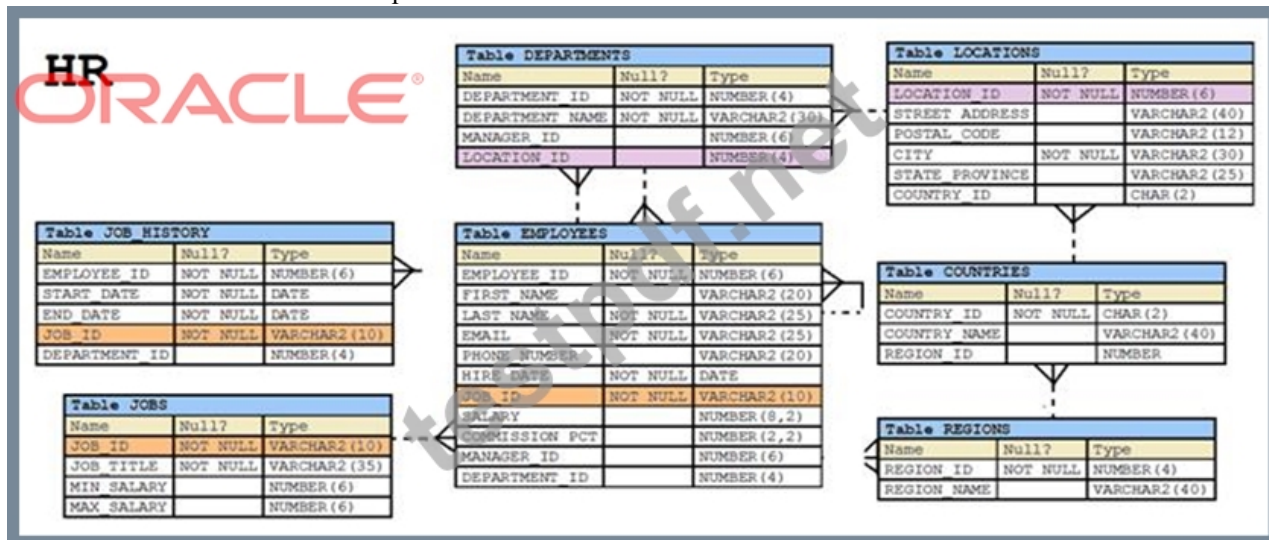

This query uses & for columns and condition, which will prompt every time the query is run. &&table will prompt for the table name

the first time and reuse the same value in the same session without re-prompting.

Options B, C, D, and E use incorrect syntax or variable types, leading to various errors or undesired behaviors, such as not maintaining the value of the table name across executions or incorrect usage of single quotes and comparison in SQL.

問題 #173

View the Exhibit and examine the description of the EMPLOYEES table.

You want to calculate the total remuneration for each employee. Total remuneration is the sum of the annual salary and the percentage commission earned for a year. Only a few employees earn commission.

Which SQL statement would you execute to get the desired output?

- A. `SELECT first_name, salary, salary*12+(salary*NVL2 (commission_pct, salary,salary+commission_pct))"Total"FROM EMPLOYEES;`
- B. `SELECT first_name, salary (salary + NVL (commission_pct, 0)*salary)*12 "Total"FROM EMPLOYEES;`
- C. `SELECT first_name, salary, salary*12+salary*commission_pct "Total"FROM EMPLOYEES;`
- D. `SELECT first_name, salary, salary*12 + NVL(salary,0)*commission_pct, "Total"FROM EMPLOYEES;`

答案：A
