Salesforce Energy and Utilities Cloud Accredited Professional Sample Questions (Q71-Q76):

NEW QUESTION # 71

An energy and utilities company wants to use objects for multi-site locations. What three objects can they use out of the box?

- A. Asset
- B. Service Point
- C. Quote
- D. Premises
- E. Service Account

Answer: B,D,E

Explanation:

For an energy and utilities company looking to manage multi-site locations using Salesforce Energy and Utilities Cloud, the following objects can be utilized out of the box: A. Service Account: Represents the account receiving the service and can be used to organize and relate to multiple service locations. C. Service Point: Represents a specific physical location where services are delivered or measured, such as a metering point for utilities. D. Premises: Represents the physical location or property where service points are located, enabling the organization of multiple service points within a larger geographical or physical area.

These objects collectively facilitate the effective management of multi-site locations, providing a structured approach to tracking service delivery and consumption across different sites. Reference = The Salesforce Energy and Utilities Cloud documentation outlines the use of these objects within the standard data model, providing a foundation for managing complex site structures and utility services: https://developer.salesforce.com/docs/atlas.en-us.industries_energy_and_utilities.meta/industries_energy_and_utilities/

NEW QUESTION # 72

An energy company provides gas and electricity services to some of its customers, but not all. When a new customer moves in, what object is used to determine what type of service is available at the premise?

- A. Asset
- B. Service Point
- C. Meter
- D. Account

Answer: B

Explanation:

In Salesforce Energy and Utilities Cloud, the Service Point object is used to determine the type of service available at a premise. This object represents a physical location where utility services are delivered, such as electricity or gas. By associating service points with specific types of utility services, energy companies can effectively manage and track the availability of different services for new and existing customers. This enables precise and efficient service provisioning, ensuring that customers receive the appropriate utility services based on their location and service point characteristics. Reference = The Salesforce Energy and Utilities Cloud documentation provides detailed information on the data model, including the role of the Service Point object in managing utility service delivery and availability: https://developer.salesforce.com/docs/atlas.en-us.industries_energy_and_utilities.meta/industries_energy_and_utilities/
